At the same time the favourable policy towards the Christians made it possible to enter into diplomatic relations with the Christian West; these had already been initiated before Hülegü, but became especially noteworthy under his son and successor Abaḳa (663/1265-680/1282), himself a Buddhist. This led to closer relations, particularly with the Papal See and the France of Louis IX (St. Louis) as well as with a few Crusader states, as being the stubborn opponents of the Mamlūks. A proposed joint campaign against the Egyptian state (1269) miscarried as a result of the impossibility of agreeing on the time to undertake it. On the other hand, a simultaneous blow planned by the rival coalition in the Caucasus and on the Oxus (1268-69) was also unsuccessful.

Thus Abaḳa could carry through a strengthening of the state founded by his father within the frontiers described above, and thereby he became its true organizer. At the same time he promoted the Buddhist mission, and this openly by building many Buddhist temples. This was balanced by his tolerant attitude towards the Christians. The Nestorians thanked him for this in 1281 by the choice of a Christian Uyghur as Catholicos (Y(h)aballahā III, until 1317), who on account of his descent had access to the court and was able to obtain many privileges, even though he knew neither Arabic nor Syriac.

Abaḳa's death of a fever (1282) introduced a period of confusion. His brother immediately embraced Islam and took the name Aḥmad. This led to an easing of tension with Egypt which, however, did not endure after his fall at the hands of his nephew, Abaḳa's son Arghūn [*q.v.*], in 1284. The latter, zealously devoted to Buddhism but lacking any real idea of the financial strength of his state, gave a free hand to the *wazīr* Saʿd al-Dawla, who remained true to his Jewish faith, gave control of many districts to his relatives, and by exorbitant demands for money repeatedly stirred up unrest among the population. This brought him to a violent end immediately after Arghūn's death in 1291. The new ruler Gaykhātū [*q.v.*], Arghūn's brother, confronted by a financial crisis, attempted the introduction in 1294 of paper money on the Chinese model (and called by the Chinese word *čao*) (see K. Jahn, *Das Iranische Papiergeld*, in *ArO*, x (1935), 308-40). In view of the complete novelty of this form of currency in the Middle East, this led to an immediate and widespread breakdown of trade and commerce. Although he had lifted the measures after only a few months, Gaykhātū was overthrown (March 1295) and the new Khān Baydu [*q.v.*], from another branch of the family, did not succeed in retaining his position, in spite of his attempt to gather round him the Buddhist circles and those true to the *yasa* [*q.v.*].

The collapse of the financial organization was accompanied by a general increase in brigandage accompanied by a disruption of the postal system [see YAM] set up by the Mongols, which in its turn led to the ruin of agriculture in many places, to the devastation of wide tracts of territory, to marked signs of inflation and to a trade crisis. General disintegration had seized the land, and this seemed all the more menacing when both the Mamlūks and the Golden Horde were preparing for fresh attacks on the Īlkhān state. Thus it was the most urgent task of the new ruler Ghāzān [*q.v.*], Arghūn's son, who succeeded at the age of 24 on 9 November 1295, to work for peace and order. He did this by introducing a great work of reform under the guidance of the *wazīrs* Rashīd al-Dīn Faḍl Allāh [*q.v.*] and ʿAlī Shāh which affected public administration, agriculture, trade and public welfare, even though many of his measures never really came to fruition in the short time available. It was also of fundamental importance that he conformed with the change in circumstances and embraced Sunnī Islam, to which the majority of leading men had in the meantime adhered, a step which did not completely suppress old Mongol traditions, such as the respected public status of women, but one which set the seal on the fusion of Mongols and Turks in Persia. This has influenced the pattern of settlement on the Iranian plateau to the present day, particularly in Ādharbāydjān where the capitals of Ṭabrīz, Marāgha and (from 1307) Sulṭāniyya (near Ḳazwīn) [*qq.v.*] were situated.

Ghāzān was however prudent enough to show a conciliatory attitude towards the Shīʿa; he visited their shrines and assisted their cause with money. Thus he was in a sufficiently strong position to reject the demands of the Golden Horde that he should move out of the Caucasus and to undertake an (unsuccessful) attempt to conquer Syria.

On the death of Ghāzān in 703/1304 the state of the Īlkhāns had passed its zenith. Ghāzān's brother, Öldjeytü, did not continue the work of reform but did at least act capably in the internal administration and in the military sphere. On the other hand, his embracing of Shīʿism in 1310 brought great affliction to the country, since he now proceeded with severe measures against the Sunnīs, who were still in the majority; the Christians also suffered more under him than they had under Ghāzān (who had quickly suppressed the attempted campaign of terrorism against them in 1295-6). Thus, civil war was threatening the state when Öldjeytü died in 716/1316 and his young son Abū Saʿīd (the first Mongol ruler with a purely Islamic name) reverted to Sunnī Islam. His youth, however, permitted the various factions around him to indulge in many kinds of intrigues. The vizier Rashīd al-Dīn, also important as an historian, was executed in 1318. Into his place stepped a general, Čūbān (Čoban) [see ČŪBĀNIDS] who collaborated with the other vizier ʿAlī Shāh until the latter's death in 724/1324, but who revealed no statesmanlike skill of his own and fell victim to a plot three years later through a concatenation of unfortunate circumstances. From that time on the two factions of Čūbān's son, Ḥasan Küčük, and his former son-in-law, Ḥasan Buzurg [*q.v.*], fought each other almost continually. Abū Saʿīd no longer played a significant part in this; he died in 736/1335 on a campaign in the Caucasus.

With the death of Abū Saʿīd the Mongol dynasty practically came to an end, although until 756/1355 a motley succession of princes of the house —and even a princess in 1339-40—were installed and deposed as Khāns. The real power lay in the hands of the two Ḥasans, of whom the younger was murdered in 1344 and the elder gradually repulsed to Baghdād, where he founded the dynasty of the Djalāyirids [*q.v.*], whose sway remained limited to Mesopotamia. The outlying territories of Asia Minor, Georgia, Little Armenia and the Kurtids had in the meantime broken away from the empire. In Fārs the Muẓaffarids [*q.v.*] took control, in Māzandarān and further east the Sarbedārids [*q.v.*], and central Persia had to endure the incessant battles of local rulers. In 1357-8, Ādharbaydjān was occupied for a short time by the Golden Horde. Only the campaigns of Tīmūr [*q.v.*] put an end to this internal collapse—and then only for a short time as the foundations of the empire he created also proved weak.

Under the Īlkhāns Persia, for the first time for centuries, was brought together as a territorial and political entity (even though this was thanks to the toleration of independent minor states): and thus this period must be regarded as of the highest significance for the country. There emerged an unusual development of the arts; and the promotion of various branches of science—while limited in aim (astronomy as a development from astrology, medicine, historiography)—finally raised the standard of the whole nation.

Our information on the period of the Īlkhāns is very extensive; first we have the abundant Persian historiography, especially the works of Djuwaynī, Rashīd al-Dīn and Waṣṣāf [*qq.v.*]; then the independent historiography in Syriac (Barhebraeus, *Chronography*), which views the course of events from a Christian standpoint and thus brings valuable supplementary information, especially on cultural history. Besides these sources, we have works in Arabic, firstly Ibn al-Fuwaṭī [*q.v.*], whose work on events in Mesopotamia is very enlightening for administrative history, then the numerous works of early Mamlūk Egyptian history, which reflect the Mamlūk point of view and therefore shed light on external events and provide a contrast with Persian works. There are also several important notices in Georgian, Armenian, Byzantine and Western works which should not be overlooked. The large number of surviving coins form a reliable alternative for the almost complete lack of original documents.

ARCHITECTURE AND ART

Īlkhānid art represents the art of the Mongol period of Iran, that is from the time when Hūlāgū assumed the title of Īlkhān until the death of Abū Saʿīd (middle of the 7th/13th century till 736/1335). It is the period of the strongest Far Eastern influence in the country, which shows itself most extensively in textiles, ceramics and miniature painting and brought into common Muslim use a number of new iconographic themes of Chinese derivation, such as the lotus, the phoenix (*feng-huang*) and square Kūfī writing, which was probably inspired by Chinese seal characters. In many other respects Īlkhānid art is the stylistic continuation and refinement of Saldjūḳ art, especially in its first half. In turn the art of several minor dynasties developing on the ruins of the Mongol sulṭānate (Indjū and Muẓaffarid in Shīrāz, Djalāyirid in Tabrīz and Baghdād, and Kart in Herāt) continue the Mongol tradition and thus

constitute the link between it and subsequent Tīmūrid art.

Architecture. The religious and secular buildings within the present political boundaries of Iran have been listed and described by D. N. Wilber (*Architecture of Islamic Iran. The Il Khānid period*, Princeton 1955; Persian translation by ʿAbd Allāh Faryār: *Miʿmārī-yi islāmī-yi Īrān dar dawre-yi Īlkhān*, Ṭehrān, 1346/1967; for some corrections and additions see the review by Myron Bement Smith in *JAOS*, lxxvi (1956), 243-7). To this body of buildings should be added the Russian publications on the monuments of Ādharbaydjān and the Turkmen S. S. R. (summarized in L. S. Bretanitskii, *Zodčestvo Azerbaidžana XII-XV vv. i ego mesto v arkhitekture peredeniego vostoka*, Moscow 1966; G. A. Pugačenkova, *Iskusstvo Turkmenistana*, Moscow, 1967). In general the plans, techniques and decorative schemes of the Saldjūḳ period continue, especially when after nearly five decades of inactivity a new architectural boom developed. This change of pace was due to the Islamization, Iranization and urbanization of the dynasty under Ghāzān Khān (694-703/1295-1304). The main religious buildings were mosques, *madrasas*, mausolea, shrines and *khānḳāhs*. The novel stylistic tendencies are a stress of the vertical by means of higher, often ovoid domes, higher and narrower eyvāns (barrel-vaulted halls open toward the courtyard end), minarets flanking portals or eyvāns and colonettes at corners; the subdivision and opening-up of non-bearing walls through windows, bays, niches and stairways; and stronger use of colour not only in the form of painted plaster decoration, usually in relief, but more specifically, after about 710/1310, by the use of faience mosaic for total wall coverage (D. N. Wilber, *The development of mosaic faience in Islamic architecture*, in *Ars Islamica*, vi (1939), 40-7). The classic Iranian mosque developed in the Saldjūḳ period with four eyvāns cross-axially arranged around a courtyard and with a high dome chamber in front of the *miḥrāb* occurs only in the Masdjid-i Djāmiʿ of Varāmīn (722-6/1322-6) and under Muẓaffarid rule in Kirmān (750/1349). However, the two earlier mosque types consisting of an open, domed kiosk based on the *čahār-ṭāḳ* fire-temple or of a large single eyvān still occur, namely in the Masdjid-i Bābā ʿAbd Allāh in Nāyīn of 700/1300, in the three mosques of about 725/1325 in the neighbourhood of Iṣfahān, at Dashtī, Kādj and Ezirān, the Masdjid-i Djāmiʿ of Ardabīl rebuilt in the early 8th/14th century and respectively, in the monumental Masdjid-i Djāmiʿ of ʿAlī Shāh in Tabrīz of ca. 710-20/1310-20. While on his visit to Iran in 727/1327 Ibn Baṭṭūṭa speaks repeatedly of *madrasas* which according to him served not only as religious schools but also as *zāwiya* (hostel, hermitage or convent). However, only four such buildings have been preserved, all of them post-Īlkhānid properly speaking. Of these the more significant are the Madrasa Imāmī of 755/1354 and the Madrasa in the Masdjid-i Djāmiʿ built between 768 and 778/1366 and 1376, both in Iṣfahān and following the four eyvān-scheme with cells for the students between the eyvāns. The importance given to mausolea particularly to imāmzādas (or burial places of descendants of the Shīʿite imāms) is apparent from their large number, as they comprise 39 monuments among the 119 listed by Wilber. They fall into two major categories, both with an inner dome over the burial chamber in the centre of which there is the sarcophagus, if the latter is not placed in a vaulted crypt underneath. They are either square chambered with more horizontally dominant features, of which the Gunbad-i ʿAlaviyān with very high florid stucco decoration of ca. 715/1315 (according to E. Herzfeld and Wilber, or ca. 1200-1250 according to Minorsky) is an outstanding example; or they constitute the larger group of the taller, vertically oriented tomb towers which can be round, square or polyhedral and are covered by exposed domes or polyhedral tent domes or conical roofs. The earliest is the Imāmzāda Shāh Čirāgh in Shīrāz of 628-58/1230-59 and they were being built throughout the period and after it, the last being the Imāmzāda Khwādja ʿImād al-Dīn of 792-1390 in Ḳumm, a town which is particularly rich in mausolea (ten in number, the earliest being of 677/1278). The other town which has preserved many such buildings in its vicinity is Iṣfahān, where the most important is the tomb of Shaykh Muḥammad b. Bakrān, known as Pīr-i Bakrān in Lindjān of which the tomb chamber, deep eyvān and entrance passageway were built between 698 and 712/1299 and 1312 and which is very important for its lavish display of carved stucco decorations and faience revetments. The lofty tomb tower of Ghāzān built between ca. 1297 and 1305 in Ghāzāniyye, a suburb of Tabrīz, was destroyed by Shāh ʿAbbās I, but the undoubtedly even more remarkable mausoleum of Sulṭān Muḥammad Öldjeytü Khudābanda in Sulṭāniyya of 705-13/1305-13 is fairly well preserved, although various subsidiary buildings and a surrounding wall with towers have disappeared (a view of the town with this building as seen in 944/1537 in a MS of Naṣūḥ al-Ṣilāḥī al-Matraki is illustrated in colour in E. Akurgal, C. Mango and R. Ettinghausen, *Treasures of Turkey*, Geneva 1966, 201). A. Godard has characterized it as "certainly the finest example known of Mongol architecture, one of the most competent and typical products of Persian Islamic building and technically perhaps the most interesting" ("The Mausoleum of Öljeitü at Sulṭāniya", in *Survey of Persian Art*, ii, 1103-18; Wilber, *op. cit.*, 139-41). While Öldjeytü followed the Shīʿite persuasion (after 709/1309), he meant to have the remains of the Caliph ʿAlī and of his son, the Imām Ḥusayn, transferred to his mausoleum, but this project was not realized. The building is an enormous octagon, about 126 feet (39 m.) wide with the burial chamber containing the cenotaph of the Sultan in a rectangular addition opposite the entrance. The outer walls are lightened on each side by a huge gallery with three openings and the inside by two-storied arcades. A terrace at the base of the dome has a minaret at each corner. The "perfectly conceived and constructed" dome itself has a span of 80 feet (24.5 m.), is single-shelled and solely built of bricks without buttresses, pinnacles or shoulders. The building is richly decorated by painted, flat stucco carvings, much of it imitating brickwork and brick-end plugs, tile revetment, faience mosaic and, on the inside, painting in the manner of book illuminations. Also in this period whole sanctuary complexes were constructed around tombs of venerated saints, such as that of Bāyazīd al-Bisṭāmī consisting of the shrine proper, a Masdjid-i Djāmiʿ and a tomb tower, built between 700 and 713/1300 and 1313 (A. U. Pope, in *Survey of Persian Art*, ii, 1080-6; Wilber, *op. cit.*, 127-8), that of Shaykh ʿAbd al-Ṣamad al-Iṣfahānī in Naṭanz, built between 704 and 725/1304 and 1325 which comprises besides the tomb a Masdjid-i Djāmiʿ, a minaret and a *khānḳāh* (Pope, *op. cit.*, 1086-9, A Godard, *Naṭanz*, in *Āthār-é Īrān*, i, 1936, 83-102; Wilber, *op. cit.*, 133-4); and also that of Aḥmad b. Abu 'l-Ḥasan, known

as Shaykh Djām, in Turbat-i Shaykh Djām, where there is a fairly well-integrated congregate of various units erected ca. 1330 (Wilber, *op. cit.*, 174). Finally a religious monument of great distinction is the *miḥrāb* of delicately carved stucco of 710/1310 in a side prayer hall of the Masdjid-i Djāmiʿ of Iṣfahān, which dates from the Shīʿite period of Öldjeytü. That few secular buildings are preserved is partly due to the fact that Īlkhānid rulers preferred to live in luxurious tents till the end of their rule and that such monuments were built of wood and other perishable material. In the Mongol mountain town of Saturiḳ, a site now called Takht-i Sulaymān, is a large ruined eyvān, decorated with niches topped by stalactites; it was part of a palace which according to Ḥamd Allāh Mustawfī was rebuilt by Abāḳā Khān and has been dated ca. 1275 by Wilber (*op. cit.*, 112). As the intensive German excavations between 1960 and 1964 elucidated, the intricate palace complex was composed of various units such as isolated eyvāns, cross-shaped buildings either with a central court or a central dome, rectangular halls, a twelve-sided building, etc., all erected along the four sides of a huge near-square layout with pillars forming an arcade around the courtyard with the oval lake in the centre. Wall tiles with geometric designs and partially glazed blue and green were discovered there, as well as two capitals decorated with Chinese dragons. In addition, a great deal of locally manufactured pottery, especially of the so-called Garrūs type (which had previously been dated 5th/11th to 7th/13th century), and moulds for *miḥrāb*s and animal sculptures appeared in the ruins. Furthermore, a square building with a carved doorway, apparently covered by a central dome was found to be Mongol (although it was formerly thought to be Parthian) and it was assumed that it might be a mausoleum. Finally, there was a large Mongol gateway. All these discoveries were unique and thus of the greatest importance for our understanding of secular Iranian architecture (R. Naumann, W. Kleiss, et. al., *Takht-i Suleiman and Zendan-i Suleiman*, in *Archäologischer Anzeiger*, lxxvi (1961), cols. 51-9; idem et. al., *ibid.*, 1962, cols. 660-70; idem et. al., *ibid.*, 1964, cols. 27-65; idem et al., *ibid.*, 1965, cols. 697-713). In addition, three poorly preserved caravanserais of the standard court type were found near Marand (ca. 1330-5), Sīn (730-1/1330-1) and Sarčam (733/1332), of which in each case the best preserved part proved to be the single portal. In Sīn it is followed by an unusual hexagonal vestibule, while in Sarčam the cut stone entrance doorway and inscription above it betray Syrian influence. The most unusual secular building was probably the observatory built about 656/1258 at Marāgha on Hūlāgū's orders from plans prepared by Naṣīr al-Dīn Ṭūsī. The structure is known to have contained a dome and a library, to which Ghāzān Khān added yet another dome, all of which were already in ruins in 1340 when Ḥamd Allāh Mustawfī wrote his *Nuzhat al-ḳulūb*.

A novel feature of the Mongol period was the massing of public buildings in newly constructed quarters, such as the Ghāzāniyya of Ghāzān Khān and Rabʿ-i Rashīdī built by his vizier Rashīd al-Dīn, both near Tabrīz. Thus the former included besides the sultan's mausoleum and his palace buildings, a mosque, two *madrasas*, a *khānḳāh*, a *zāwiya* for *sayyids*, an observatory, a hospital, a library, archive and administrative buildings, *ḥammāms* and a fountain, while the latter boasted two mosques, *madrasas*, a *khānḳāh*, scientific institutions, two libraries, hospitals, *ḥammāms*, caravanserais, spinning mills, paper factories, a dye house, a mint and gardens (K. Jahn, *Täbris, ein mittelalterliches Kultuurzentrum zwischen Ost und West*, in *Österreichische Akademie der Wissenschaften, Anzeiger der phil.-hist. Klasse*, Jahrg. 1968, No. 11, pp. 207, 210). It is not specifically known whether or not these structures were built in a coordinated or more haphazard fashion; if the first assumption is right (and much speaks for it), this Mongol activity would be the forerunner of the "*külliyye*" foundations of the Ottoman sultans in Iznik, Bursa and Istanbul.

Ceramics. The main manufacturing centre was Kāshān, since Rayy did not resume its activities after the Mongol destruction of ca. 1220. Throughout the period Kāshān produced both large scale *miḥrāb*s and small scale tile revetments (both called *kāshī* after the town) as well as pottery. Of these the production of the *miḥrāb*s was the more conservative. Symbolizing a niche, they usually formed a succession of flat arches with the innermost often showing a lamp (in reference to Sūra XXIV, verse 35) and had as their main decoration Ḳurʾānic passages or invocations of the Shīʿī imāns, rendered in dark blue relief set against a lustre background. The manufacture starts as early as 623/1226 and continues as late as 734/1333, and as the signed pieces indicate was at times practised by family workshops. As the often dated tiles show, they were made throughout the period and as late as 739/1338. They were usually lustre painted and formed dadoes in which eight-pointed stars alternate with cross-shaped units; from ca. 1300 on, the latter were for contrast's sake glazed cobalt blue or turquoise green. While the tiles for religious buildings showed floral or arabesque designs, those made for secular structures displayed realistically rendered animals and, occasionally, figural subjects in the Saldjūḳ tradition. Only in the 8th/14th century do the depicted personages begin to wear Mongol costumes. Toward the end of the 7th/13th century rather coarse relief designs appear with Far Eastern motifs in the centre and large *naskh* writing in white on a blue ground as the framing device. In the 8th/14th century there is a definite decline in the artistic quality.

Throughout the 7th/13th century the pottery, too, followed Saldjūḳ tradition, but was slowly losing the delicate details and general refinement of the earlier wares. A new, nearly hemispherical shape appears and also a heavily shaped bowl whose upper walls are vertical and crested with a flange which projects both outward and inward; there is also a new interior decorative scheme of radial segments filled with alternating motifs. While overglaze painting (called *mīnāʾī*) disappears in this period, other techniques emerge which become specifically identified with this period. These are a ware with underglaze painting in green, blue and purple on a white ground made between 672/1274 and 729/1329; a ware with a characteristic deep cobalt blue glaze with overglaze painted designs in white, red and gold used for both pottery and tiles (only one dated tile of 715/1315 so far discovered); finally there are three related wares which can be attributed to the first four decades of the 8th/14th century and which, though erroneously connected with the modern town of Sulṭānābād (where the earliest pieces had been found), still show stylistic connections with the earlier Kāshān production. Their common aspect is a coarse clay body, heavy potting, a very dense underglaze painted design in which the ground nearly disappears usually under a display of foliage, and a

preference for a subdued chromatic range consisting of greys, browns and whites with dark blue and turquoise only discreetly used. The flower and animal motifs are often of Far Eastern origin and the figures wear Mongol costume. This type of pottery had a strong influence in other Muslim countries, even those politically at odds with the Mongols. Its style is therefore found not only in the pottery of the Golden Horde at Saray Berke, but also in Damascus and Cairo (A. Lane, *Later Islamic pottery. Persia, Syria, Egypt, Turkey*, London 1957, 6-20). The material evidence of the pieces themselves is corroborated and supplemented by a section in a Persian MS of 700/1300 in which Abu 'l-Ḳāsim ʿAbd Allāh b. ʿAlī b. Muḥammad b. Abī Ṭāhir, son and brother of two well-known Kās̲h̲ān potters, provides information about the raw materials and technical processes involved in the contemporary Kās̲h̲ān production of glazed ceramics (H. Ritter, J. Ruska, F. Sarre and R. Winderlich, *Orientalische Steinbücher und persische Fayencetechnik*, Istanbul 1935).

Metalwork. It is difficult to differentiate the Iranian objects from those made in neighbouring countries especially in the D̲j̲azīra. The designs on the brasses of the 7th/13th century and those of the 8th/14th century, inlaid with silver and sometimes with gold, and very rarely with copper, become progressively drier, more rigid and less imaginative in comparison to those of the Sald̲j̲ūḳ period. However, they continue the earlier modes of decoration, particularly the deployment of the patterns in registers with skilfully arranged roundels and cartouches of various sizes set against formalized background designs, and often using human figures in court scenes. In this respect they show the strong imprint of Mesopotamian, especially Mawṣil work, although it must be remembered that the pieces from that region were originally themselves influenced by the Iranian metal production. (For a study of a special group starting in 705/1305 with a bowl by a S̲h̲īrāzī artist see Eva Baer, *Fish-pond ornaments on Persian and Mamluk metal vessels*, in *BSOAS*, xxxi (1968), 14-27). Chinese influence is occasionally found (R. H. Pinder-Wilson, *A Persian bronze mortar of the Mongol period*, in *Proc. XXVth Int. Congress of Orientalists*, 9th-16th August 1960, Moscow 1963, ii, 204-6). That the period is not without creative ability is demonstrated by a number of new shapes for caskets, especially a polygonal one with a domed cover. Dated pieces of the 8th/14th century indicate that in the second half of the Mongol period there is a growing predilection for the sole use of inscriptions, floral designs, arabesques and geometric patterns, although a bowl of 752/1351 still has human figures in the uninterrupted main register. L. Giuzalian has identified a production in S̲h̲īrāz made for the Ind̲j̲ū Sultan Abū Isḥāḳ (see *Proc. XXVth Int. Congress of Orientalists*, ii, 174-8). S̲h̲īrāz work continued under the Muẓaffarids, as a signed piece in the Cairo Museum of 761/1360 indicates. A different type of metalwork, a huge bronze basin by an Iṣfahānī artist, carrying the name of the Sultan G̲h̲iyāt̲h̲ al-Dīn Muḥammad Abū Bakr of the Kart dynasty, was cast in 776/1375 for the Masd̲j̲id-i D̲j̲āmiʿ in Herāt (A. S. Melikian Chirvani, *Un basin iranien de l'an 1375*, in *Gazette des Beaux-Arts*, n.s. lxxiii (1969), 5-18). A third, and again different post-Mongol group consists of a number of richly silver inlaid bowls with elaborate miniature-like court scenes in or between roundels which foreshadow the Tīmūrid painting style. (A general survey in D. Barrett, *Islamic metalwork in the British Museum*, London 1949, pp. XVII-XIX).

Textiles. There is no doubt that fabrics were woven in Iran during the Mongol period, but modern research has so far not been able to distinguish them clearly from the products of other Muslim regions and possibly even from those made in China. These textiles called *panni tartarici* in Western sources represent an international luxury style. It is, however, obvious that the overall organization based on roundels with one or two heraldically rendered animals and an interstitial pattern which had been developed in Sāsānian times and was still current in the Sald̲j̲ūḳ period was no longer the main arrangement. Chinese ideas had thoroughly destroyed that convention of many centuries and had introduced new composition schemes and Far Eastern motifs. The arrangement which was closest to the old system was an overall pattern of pointed ovals formed by a system of stems which enclose animals in a circular setting. Otherwise there was often an open composition with animals in alternate rows placed in dense vegetation. The most common organizational schemes were bands of various width with Arabic inscriptions, flowers, geometric and other formal designs and, to a lesser extent, with animals and birds. The key piece is the burial robe of Duke Rudolf IV of Austria (1365) in the Episcopal Museum in Vienna which has the name of Īlk̲h̲ān Sulṭān Abū Saʿīd woven in it; this in turn is close to the fabric found in the tomb of Cangrande I at Verona (1329) (G. Sangiorgi, *Le stoffe e le vesti tombali di Cangrande I della Scala*, in *Bollettino d'Arte*, n.s. i (1921), 441-57; see also Otto von Falke, *Kunstgeschichte der Seidenweberei*, Berlin 1913, ii, 50-63, now antiquated, but richly illustrative material; W. Mannowski, *Kirchliche Gewänder und Stickereien aus dem Schatz der Marienkirche*, Danzig 1929, vol. 3, vol. 2, nos. 30-33; Phyllis Ackerman, *Textiles of the Islamic periods*, in *Survey of Persian Art*, iii, 2042-61; Lane, *Later Islamic pottery*, 3-5).

The Art of the Book. The period's earliest dated book bindings of 676/1277 and 697 or 699/1297 or 1299 respectively, both from Marāg̲h̲a, use blind tooling to create a central mandorla-shaped medallion and triangular corner pieces within a simple frame. The punches are limited in number and all of a geometric nature with the exception of two arabesques on the flap of the second piece. In composition and in its filling devices this binding is still in the Sald̲j̲ūḳ tradition and only in the following century does the style advance. Thus on a thirty-volume Ḳurʾān set made in Hamadān in 713/1313 for Sultan Öld̲j̲eytü gold tooling in the form of dots appears and is applied to a larger and more elaborate circular medallion filled with geometric patterns. Designs impressed into the lining (doublure) of the binding are first found in 704/1304 and the first signature stamp in 706/1306. By 735/1334 the central medallion and corner pieces have become bigger and have a more elaborate outline, while in 781/1379 the earlier mode of filling the decorative forms with geometric strapwork has been replaced by arabesques and even naturalistic floral branches. Overall large scale geometric configurations as found in Mamlūk Egypt remain, however, unknown, and in the 8th/14th century the use of gold tooling remains still limited (R. Ettinghausen, *The covers of the Morgan* Manāfiʿ *manuscript and other early Persian bookbindings*, in *Studies in art and literature for Belle da Costa Greene*, ed. D. Miner, Princeton 1954, 459-73; K. B. Gardner, *Three early Islamic book-*

bindings, in *The British Museum Quarterly*, xxvi, (1962), 29-30).

More spectacular than the bindings are the illuminations, especially the "carpet pages" in Ḳurʾāns and other MSS. Here again Öldjeytü was the great patron, as is shown by the large size, thirty-volume Ḳurʾān set in the National Library, Cairo, created in Hamadān in 713/1313. Here colourful arabesques and knot designs were placed within ever changing geometric layouts. Other giant Ḳurʾān MSS were written for the same sultan in Baghdād in 706/1306 and in Mawṣil in 710/1310. A Rashīd al-Dīn MS of 710/1310 demonstrates that other texts were also handsomely decorated, in this case with a carpet-like repeat pattern within a richly treated frame. Its design is, however, in a less monumental, more delicate style and the same general tendency is noticeable in later Ḳurʾān MSS of 728/1327 and 738/1338. All these illuminations have a character of their own which distinguishes them from both the Saldjūḳ and Tīmūrid creations (R. Ettinghausen, *Manuscript illumination*, in *Survey of Persian Art*, iii, 1954-9).

In spite of conservative tendencies in certain early MSS and even in the late MSS painted in Shīrāz between 731/1330 and 741/1341 under the Indjü Sultans, miniature painting of the Īlkhānid period achieved a complete break with traditions evolved by Arab or Saldjūḳ Iranian ateliers, or as the Ṣafavid calligrapher and painter Dūst Muḥammad expressed it in 951/1544: Its first great master (Aḥmad Mūsā) "withdrew the covering from the face of painting and invented the kind of painting which is current at the present time". The evolution developed rapidly from MS to MS and, as already the earliest MS, Djuwaynī's *Tārīkh-i Djahān-gushā* of 689/1290 in the Bibliothèque Nationale in Paris, indicates, is engendered by a strong Chinese influence. In this earliest MS as well as in a group of undated small-size *Shāh-nāma* MSS of the early 8th/14th century and in the Shīrāz MSS between 1330 and 1341 it is only Chinese motifs and Far Eastern costumes which betray the new trend, but in many miniatures of the next MS, Ibn Bakhtīshūʿ's *Manāfiʿ al-ḥayawān* of 697-699/1297 or 1299 in the Morgan Library, there is in addition a new indication of spatial depth, an interest in the rendition of landscape and impressionistic tendencies to depict small plants. In MSS of Rashīd al-Dīn's *Djāmiʿ al-tawārīkh* of 706/1306, 714/1314 and 717/1318 the polychrome Saldjūḳ manner is replaced by a linear style with subdued partial colouring. In addition pure landscape renditions and a novel interest in the portrayal of human drama and emotions are to be found. The activities of the next two to three decades are not quite clear, as there are no dated MSS preserved. However, a MS which is usually regarded as the major product of the late period of Sultan Abū Saʿīd and the following years (ca. 1330-40), a large size *Shāh-nāma* fragment (often called the "Demotte *Shāh-nāmeh*" after its first antiquarian owner) shows various experimental stages of the amalgamation of the novel concepts. At times they appear in somewhat confused compositions, but many miniatures reveal that a new style has been born, so that the MS presents itself in the monumental manner which is commensurate with its subject matter. It goes back to the rich palette of the pre-Mongol styles for figures and architecture but this is combined with three-dimensional monochrome elements used for such landscape features as trees, rocks, hills and receding ridges. While in some paintings there is a full awareness of the new concepts of three-dimensionality, in others space is restricted by placing the action or scene into a narrow frontal zone which is cut off by decoratively treated elements of the background such as hills or an architectural screen. More than in any other MS narration is turned into a heroic spectacle reflecting at times a specific mood. This is even mirrored in the landscapes, which therefore become an important element in the composition. A large body of detached miniatures of historical, legendary, folkloristic and eschatological nature found in eight albums in the Topkapı Sarayı Müzesi of Istanbul and in the Preussische Staatsbibliothek (now Tübingen) reflects the same stylistic stage and also that of the following decades. Among them are miniatures from a *Miʿrādj-nāma* with old attributions to Aḥmad Mūsā, who is credited with such a work by Dūst Muḥammad and is called the leading master of the period. The same general data applies probably to the cut-out paintings of a large scale *Kalīla wa-Dimna* MS, now in the University Library, Istanbul, where the more successful integration of the figures and landscape speaks for a slightly later date than that of the more experimental "Demotte *Shāh-nāmeh*". The only dated MS of this period and style is a *Garshāsp-nāma* of 754/1354 also in the Topkapı Sarayı which represents a stylistic stage after the "Demotte *Shāh-nāmeh*", but still reflects its manner. A more advanced style, possibly from another locality, if the paintings were not executed at a later date than the MS, is found in another *Kalīla wa-Dimna*, the text of which is dated 744/1343 (in Cairo), where the figures are more diminutive while the landscape is purely decorative and the space hardly rendered. This is a general tendency whlch is clearly noticeable in various dated MSS of the second half of the 8th/14th century (L. Binyon, J. V. S. Wilkinson, Basil Gray, *Persian miniature painting*, London 1933, 29-48, 184; D. Barrett, *Persian painting in the fourteenth century*, London n.d.; E. Kühnel, *History of miniature painting and drawing*, in *Survey of Persian Art*, iii, 1833-41; R. Ettinghausen, *On some Mongol miniatures*, in *Kunst des Orients*, iii (1959), 44-65; B. Gray, *Persian painting*, Geneva 1961, 19-55 (bibliography: p. 173); B. W. Robinson, *Persian painting*, London 1967, 35-42; 84-5; on the albums: R. Ettinghausen, *Persian Ascension miniatures*, in XII Convegno Volta (Accademia dei Lincei, Roma), Rome 1957, 360-83; M. S. Ipşiroğlu, *Saray-Alben. Diez'sche Klebebände aus Berliner Sammlungen*, Wiesbaden 1964; idem, *Malerei der Mongolen*, Munich 1965).

Bibliography of publications treating of the whole subject: "Ilkhan Art", in *Encyclopedia of World Art*, vii, New York 1963, columns 788-98 with extensive bibliography; and chapters in the general histories of Islamic art, *e.g.*, those by Georges Marçais, Ernst Kühnel and Katharina Otto-Dorn. For the decorative arts and painting see also Oleg Grabar, *Persian art before and after the Mongol conquest*, University of Michigan Museum of Art, Ann Arbor 1959; idem, "The visual arts, 1050-1350" in *Cambridge History of Iran*, v, ed. J. A. Boyle, Cambridge 1968, 626-58.

(R. Ettinghausen)

ʿILLA "cause", pl. *ʿilal*.

i.—Grammar

The idea of the *ʿilla* is important, and appears in the earliest treatises. In fact, Ibn Sallām al-Djumaḥī, who sees ʿAbd Allāh b. Abī Isḥāḳ (d. 117/735) as the founder of *naḥw*, says of him: "he enlarged the scope of *ḳiyās* and explained the *ʿilal*" (al-Ḳifṭī,

*Inbā*ʾ, ii, 105). Few grammarians, however, have dealt with the question of *ʿilal* for its own sake: al-Zadjdjādjī, in ch. 5 (64-6) of the *Kitāb al-Īḍāḥ fī ʿilal al-naḥw* (Cairo 1378/1959); Ibn Djinnī, in several chapters of the *Khaṣāʾiṣ*, i (Cairo 1371/1952), 48-95, 144-63, 173-4, 174-80, 183-4; al-Suyūṭī, in ch. 4 *al-ʿilla* (54-68) of the *Kitāb al-Iḳtirāḥ fī ʿilm uṣūl al-naḥw* (Cairo 1310); from him we know that Ibn al-Sarrādj dealt with it at the beginning of his *Uṣūl*, and al-Ḥusayn al-Dīnawarī al-Djalīs (*Bughya*, 236) in the *Kitāb Thimār al-ṣināʿa* (in MS., see Brockelmann S I, 514).

Al-Zadjdjādjī (d. 337/948-9), in this ch. 5 *ʿilal al-naḥw*, says that they are artificial (*mustanbaṭa*) and not necessitating (*laysat mūdjiba*), and puts them into three categories: *taʿlīmiyya, ḳiyāsiyya, djadaliyya naẓariyya*. The first are concerned with the teaching (*taʿlīm*) of the language of the Arabs, permit it to be learnt and are included among the norms that rule it. One says: *ḳāma Zaydun*, "Zayd rose", with Zayd in the *rafʿ* (nominative), and if the question is asked: why is Zayd in the *rafʿ*? the answer is—and this is the *ʿilla*—because he is the *fāʿil*, "the agent" of the verb, which affects him and puts him in the *rafʿ*. One says: *inna Zaydan ḳāʾimun*, "Zayd is standing". Why, in this case, should Zayd be in the *naṣb* (accusative) and *ḳāʾim* in the *rafʿ*? The answer is: because of *inna*, which puts the noun following it in the *naṣb* and the *khabar* (predicate) in the *rafʿ*. This reply expresses the *ʿilla*.

ʿIlal ḳiyāsiyya are concerned with explanations founded on *ḳiyās*, "analogy": in the case of *inna Zaydan ḳāʾimun*, why should *inna* put the noun in the *naṣb*? Because (*ʿilla ḳiyāsiyya*) it resembles a transitive verb; it is thus thought of as comparable with it and behaves like it, because of this resemblance. From a formal point of view, *Zaydan* is comparable with the object of the verb in the *naṣb*, and *ḳāʾim* in the *rafʿ* with the *fāʿil*, which is in the *rafʿ*.

ʿIlal djadaliyya naẓariyya make up all the other explanations that are worked out by reflexion (*naẓar*) and frequently brought into discussion (*djadal*), in answer to the questions that arise subsequently. The previous *ʿilla* (*ḳiyāsiyya*) stated: a resemblance to a transitive verb. To what verb? to a verb in the past? in the present? in the future? In a comparison with a transitive verb, why select a verb the complement of which precedes the *fāʿil* (such as *ḍaraba Zaydan ʿAmrun*)? This is a secondary construction (*farʿ*) in relation to the basic construction (*aṣl*): *ḍaraba ʿAmrun Zaydan*. Why choose a secondary construction? What similar cases justify this course of action? Are both constructions (that of *farʿ* and that of *aṣl*) permissible? No, for one cannot say: *inna ḳāʾimun Zaydan*. Why, then, revoke this prohibition and permit: *inna amāmaka Bakran*, "Bakr is in front of you"? etc., etc. All the answers to these questions are *ʿilal djadaliyya naẓariyya*. Arab grammarians speculated unrestrainedly about the *ʿilal*; it was no empty game for them, but rather an attempt to discover *ḥikma*, the Wisdom which harmoniously organizes everything in the language of the Arabs (cf. Ibn al-Sarrādj), and which came through revelation.

Ibn al-Sarrādj (d. 316/929) established (*Iḳtirāḥ*, 58) two classes of *iʿtilālāt*, the arguments of the grammarians: (a) Those "which lead to knowledge of the language of the Arabs, such as: every *fāʿil* is *marfūʿ* (in the nominative) and every *mafʿūl* (complement) is *manṣūb*". [This is al-Zadjdjādjī's first category]. (b) Those which are *ʿillat ʿilla* "the cause of a cause", "such as: why is the *fāʿil marfūʿ* and the *mafʿūl manṣūb*? Nothing is gained by talking as the Arabs did. We merely extract the wisdom contained in the *uṣūl* (rules) that they have established, and the superiority of this language over others is thus shown"; *ʿillat ʿilla* comprehends al-Zadjdjādjī's other two categories.

Ibn Djinnī (d. 392/1002) seeks to deepen the idea of *ʿilla* in grammar (references to the *Khaṣāʾiṣ*). First, he does not accept (i, 173-4) Ibn al-Sarrādj's expression: *ʿillat ʿilla*. This is simply a linguistic licence, which does not correspond with reality, for it is concerned with explanations or complements applied to the *ʿilla*. "The real cause is not caused (*maʿlūla*)" (i, 174, line 5); it exists by nature. This is what requires to be examined, and Ibn Djinnī speculates concerning the character of this cause. He makes an initial distinction (i, 164): *al-ʿilla al-mūdjiba*, "the necessitating cause" and *al-ʿilla al-mudjawwiza*, "the cause that permits action", such as the possibility of changing *w* into *hamza* in *wuḳḳita* > *ʾuḳḳita*, "have a time assigned for something", or *wudjūh* > *ʾudjūh*, "faces". This, in fact, is only a *sabab* which permits but does not necessitate (see below, Rem. a). *Al-ʿilla al-mūdjiba* remains. Is this of the type dealt with by the theologian or of that dealt with by the jurist? He says (i, 48, 145) that it is closer to the first than to the second, and superior to the latter (i, 50, l. 15), for the grammarians refer to sense (*al-ḥiss*) and speak of heaviness or lightness in the sounds of the language, which are clearly perceptible to everyone, whereas legal causation has recourse to signs (*li-wuḳūʿ al-aḥkām*), in order that judgments may be made (see also: i, 48, ll. 6-12; 51, ll. 12-5). He also distinguishes, within *al-ʿilla al-mūdjiba* (i, 88, 164): (a) the *ʿilla* that necessitates, leaving no possibility of evasion, such as the changing of *alif* to *wāw* in *ḍārib* ("hitting") > *ḍuwayrib* in the diminutive; this is comparable with the causes of the theologians; (b) the *ʿilla* that can be avoided, but in this case one must accept something disagreeable and repugnant; such as, for example, in saying: **muyḳin* (following the *aṣl*), without changing the *y to w*: *mūḳin*, "he who knows with certainty"; or **miwzān*, without changing the *w* to *y*: *mīzan* "balance"; its causation is not absolute. Thus he says (i, 87 end): "We do not claim that they [the *ʿilal al-naḥw*] reach the same level (*tablugh ḳadr*) of the *ʿilal* of the theologians" (cf. i, 145, ll. 9-11). He does not then wish to identify these causes completely, but simply to note that they exhibit a more marked resemblance to one another. Thus, going beyond the *ʿilal* of the jurists on the one hand, and, on the other, more resembling the *ʿilal* of the theologians, while falling short of the latter, the *ʿilal* of the grammarians hold a peculiar position. As R. Arnaldez says (*Grammaire et théologie chez Ibn Ḥazm de Cordoue*, Paris 1956, 96): "The problem is thus clearly set and answered with respect to the specificity of the grammatical cause". This is from the Arab point of view. Modern linguistics considers not causes in language but significant oppositions between signs, and relationships between the different signs in the sentence: functions, provided with formal marks.

What, however, does Ibn Djinnī mean by *al-ʿilla al-mūdjiba*? Without doubt the first category of al-Zadjdjādjī and Ibn al-Sarrādj (cf. i, 164, ll. 2-5). Having rejected the *ʿillat ʿilla* of the latter, he has to confine himself to this first category, Now, to take one example, he makes frequent use of *istithḳāl* "estimation of heaviness" (and, consequently, of lightness). Moreover, he uses the arguments of the grammarians by means of *istithḳāl* to show the

difference between the *ʿilal* of the grammarians and those of the jurists (above and i, 48, l. 4). This *istithḳāl* is a *ʿilla naẓariyya*; in fact, in the cases quoted above—**muyḳin* > *mūḳin*, **miwzān* > *mīzān* (non-absolute *ʿilla mūdjiba*) — *al-ʿilla al-taʿlīmiyya* simply states the changes: *uy* > *ū*, *iw* > *ī*; the "why?", however, the explanation by means of estimating heaviness, *istithḳāl*, comes from the *naẓar*, from reflexion on linguistic behaviour, in the particular case. What then are we to think? After careful examination, we must conclude that it is the term *ʿillat ʿilla* and the abuse of useless questions that Ibn Djinnī has rejected (see i, 173, ll. 11 ff.), but that he intended to go beyond the simple grammatical statement and to set up, in the real causes, an explanation that comes from the working of linguistic feeling, such as his *istithḳāl*, or from that which he believes appropriate to the Arabic language. Granting the cases referred to (*mūḳin, mīzān et al.*), yet when we consider how far he carries his use of *istithḳāl, e.g.*, i, 55, ll. 4-8, we see that he reaches the pure systematic *ʿilla naẓariyya*. Real grammatical cause remains for him a domain that has a clear first limit with the *taʿlīmiyya*, but extends, more or less rightly, into the *naẓariyya*; reservations are made, here, about the question of the *ḳiyāsiyya*, in view of the extent of Ibn Djinnī's discussion of *ḳiyās*.

Al-Dīnawarī (wrote before 583/1187; Brockelmann, S I, 514), in the *Kitāb* mentioned above (with the *sharḥ* of Ibn Maktūm) (in al-Suyūṭī, 2nd *masʾala*: Divisions of the *ʿilal, Iḳtirāḥ*, 56-8), also introduces two divisions. The second apparently corresponds with that of Ibn al-Sarrādj, but he does not discuss it (*ibid.*, 58, l. 14-5). The first enumerates the 24 well-known types (*nawʿ*) of the grammarians' *ʿilal*: *taṭṭarid ʿalā kalām al-ʿArab wa-tunsāḳ ilā ḳānūn lughatihim*, "valid for the whole of the Arab speech and referred to the canon of their language". These, however, are no longer merely the *taʿlīmiyya* or Ibn al-Sarrādj's first division. For example, an important *ḳiyāsiyya* is in fact to be found there: the *ʿillat tashbīh* "the cause of resemblance", such as the *iʿrāb* of the *muḍāriʿ* because of its resemblance to a noun, and the *bināʾ* (absence of *iʿrāb*) of certain nouns because of their resemblance to the *ḥurūf* (*ibid.*, 57, l. 5-6); and the *ʿillat farḳ*, "the cause of difference" (l. 7-9), a purely systematic *ʿilla naẓariyya*.

When Ibn Djinnī's procedure with respect to *istithḳāl* is seen, and his tendency towards pure systematic *naẓariyya*, it is not surprising to find al-Dīnawarī produce such a mixture, in his count of the *ʿilal*. This means that the grammarian, in his grammatical speculation, comes no longer to distinguish clearly between the actual rules of the Arabic language (the *taʿlīmiyya*) and all the "whys?" that they have accumulated to account for these rules, and that he thus comes to ascribe to the former the same objective value as to the latter. Besides, al-Suyūṭī, repeating the enumeration of the 24 types mentioned, in the biographical notice of al-Dīnawarī (*Bughya*, 236), introduces them simply as: *ʿilal al-naḥw al-mashhūra*, according to that author.

A *ʿilla* may also be *basīṭa*, "simple" or *murakkaba*, "compound"; this is the subject of al-Suyūṭī's 5th *masʾala* (*Iḳtirāḥ*, 61-2). A good example of *murakkaba* is the explanation of *manʿ al-ṣarf*, "prevention of *ṣarf*" for nouns with only two cases, by means of the combined action of two *māniʿ*, "obstacle" (see also Ibn Djinnī, i, 174-80).

The important part ascribed to the *ʿilla* in the theory of *ḳiyās* should also be noted; it can be seen in the account of Ibn al-Anbārī: *Lumaʿ al-adilla fī uṣūl al-naḥw* (ed. Attia Amer), 53: *ḳiyās al-ʿilla* is accepted by all *bi-idjmāʿ*, with unanimous consent, and it is the only one that enjoys *idjmāʿ*; *ḳiyās al-shabah*, "the *ḳiyās* of resemblance" is accepted by *akthar al-ʿulamāʾ*, "most scholars".

Remarks: (a) *ʿilla, sabab*. Ibn Djinnī appears to make a distinction between the two terms: *al-ʿilla al-mudjawwiza* is really only a *sabab* that permits and does not necessitate (above and i, 164, l. 6). al-Suyūṭī (d. 911/1505) (*Iḳtirāḥ*, 59, l. 14), in a note that follows the end (which is clearly marked) of the quotation of Ibn Djinnī, decides in favour of a firm distinction: "It is clear, then, that by means of this difference that which necessitates is called *ʿilla* and that which permits is called *sabab*". This is developed by the commentator on the *Iḳtirāḥ*, Muḥammad ʿAlī b. ʿAllān (d. 1057/1648), quoted by the editor of the *Khaṣāʾiṣ*, i, 164, n. 4. If the latter had noticed the *intahā* that closes the quotation from Ibn Djinnī he would not have attributed to him (*ibid.*) a self-contradiction. —For *ʿilla* and *sabab* in Ibn Ḥazm, see R. Arnaldez, *op. cit.*, 186.

(b) For another sense of *ʿilla*: *ḥurūf al-ʿilla* or *al-iʿtilāl* or *al-ḥurūf al-muʿtalla*, see ḤURŪF AL-HIDJĀʾ. These are *alif, wāw, yāʾ*, known as "sick" *ḥurūf*, as opposed to the others, the "healthy" ones, *al-ḥurūf al-ṣaḥīḥa*. The changes to which they are subject are dealt with in Arabic grammars in the chapter on *iʿlāl* or *iʿtilāl, e.g.*, R. al-Shartūnī, *Mabādiʾ al-ʿarabiyya*, iv (9th ed., Beirut 1961), 35-40; H. Fleisch, *Traité de philologie arabe*, i, 118-37.

Bibliography: in the text. Ch. 4 of the *Iḳtirāḥ* of al-Suyūṭī, which is made up of quotations, has the advantage of gathering together the important texts; the author, however, makes certain cuts in his quotations from Ibn Djinnī. (H. FLEISCH)

ii.—PHILOSOPHY

Cause, in the exact sense of Aristotle's τὸ αἴτιον. The term was adopted by Shīʿī thought, by the *falāsifa* and by the later *mutakallimūn* in their resumés and refutations of *falsafa*. The *mutakallimūn*, however, tended rather, in order to denote a causal sequence and the production of an effect, to use *sabab*, pl. *asbāb*, which implies primarily the idea of "channel", "intermediary". A certain confusion of vocabulary sometimes arises from this, and all the more since the *falāsifa*, in particular al-Fārābī and Ibn Sīnā, use *sabab* freely as a synonym of *ʿilla*.

The term *ʿilla* seems to have been adopted very early in the translations of Greek texts. It would be tedious to try to trace it through, and we may simply remark the influence that the Neo-Platonic writings attributed to Aristotle may have had in this matter as in many others: especially, here, the extracts from the *Elementatio theologica* of Proclus, which in Arabic became the "Book of the Explanation of Aristotle concerning the pure Good" (*al-khayr al-maḥḍ*), and were known to the Latin Middle Ages as the *Liber de Causis* (Arabic ed. by Bardenhewer, Freiburg i. B., 1882; re-ed. by A. Badawi in *Neoplatonici apud Arabos*, Cairo 1955). From the very first lines of the work, the relationship of the first Cause (here *al-ʿilla al-awwaliyya*) with the second cause, as described in the text, makes it clear that the thing caused (*maʿlūl*) is maintained in being by the universal first Cause, even when the immediate second cause ceases to exert its influence: "and even if the second cause is separated from the effect that follows it, the first Cause, which is above it, is not separated from that effect, since it is the cause of its cause". The Latin Middle Ages incorporated

this relationship in a purely creationist view of the world, and one of a world "commenced" in time, while *falsafa*—at any rate eastern *falsafa*—interpreted it as requiring a necessary and eternal emanation.

Here, as a guide, are some of the more important references.

I. Shīʿī thought. An epistle of the *Ikhwān al-Ṣafāʾ* is entitled "on causes (*ʿilal*) and things caused (*maʿlūlāt*)" (*Rasāʾil Ikhwān al-Ṣafāʾ*, Cairo 1347/1928, iii, 324 ff.). One chapter is devoted to the ideas in question (*ibid.*, 336-7). The definitions refer to the more traditional idea of *sabab*: *ʿilla* is the "intermediary" (*sabab*) necessary for the existence of another thing, and the *maʿlūl* ("thing caused", effect) is that whose existence requires some "intermediary". As for the various kinds of causes, their possible enumeration is governed by two points of view. (1) An analysis very close to that of Aristotle (*Physics*, ii, 3 and Metaphysics, Δ, 2) distinguishes the efficient cause or agent (*ʿilla fāʿila*), the material cause (*ʿilla hayūlāniyya*), the formal cause (*ʿilla ṣūriyya*) and the final or "perfect" cause (*ʿilla tamāmiyya*). These four causes, according to the text, are to be found in every "produced" object. (2) To this is added the list of what the agent that produces an effect needs, according to its nature. If the agent is a man, he needs matter, place, time, members as instruments, implements and certain movements. A "natural" agent, on the other hand, needs only matter, place, time and movements; an "animate" agent, endowed with vital (*nafsānī*) breath, needs only matter and movements. The paragraph ends with the statement that the Most High Creator (*al-bāriʾ*) "needs none of this, since His Act is absolute beginning and creation" with regard to both matter and time, and to movements, instruments and implements. The epistle adds that obstacles created by deficiencies in the matter (*mādda*), by the difficulties encountered by the first matter (*hayūlā*) in receiving form, by lack of instruments and implements or by personal inadequacies, may all constitute hindrances to the action of the agent. "How far removed is God Most High from all this!"

Beings that are caused are divided, in their turn, into four categories: those produced by men; "natural" beings (minerals, vegetables, animals); then two categories the details of which depend on certain Ismāʿīlī views: on the one hand the pure *nafsāniyya* beings (planets, stars, elements), on the other the *rūḥāniyya* or "spiritual" beings (first matter, separate form, soul, intellect).

This description of the causes certainly borrows many of its elements from the Aristotelian tradition. It is expressed, however, in an analytic frame that is not Aristotle's; it is more descriptive and more careful to refer to the hierarchies of beings. The examination of the causes seems less to satisfy the intellectual grasp of what constitutes things than to define the intermediate conditions without which things could not be brought into existence. These conditions, however, establish necessary links between the causes and their effects, and thereby lead to the recognition of the efficacy (*taʾthīr*) of the first on the second. The Ismāʿīlī theory of the first matter, which gives a spiritual (*rūḥānī*) reality to the *hayūlā* [*q.v.*], diverts the idea of material cause in a new direction; the Muslim faith states that God transcends any operation of secondary causality, in the absolute immediacy of His creative (emanative) Act.

Shīʿī (Ismāʿīlī) thought follows, with less technical precision, the same lines and somewhat accentuates them. The first Cause (*al-ʿilla al-ūlā*) is sometimes God Himself, sometimes the first Emanation, thought of as God as knowable and nameable. Here we shall refer only to the *Kitāb Djāmiʿ al-ḥikmatayn* of Nāṣir-i Khusraw (ed. H. Corbin and M. Muʿīn, Paris-Teheran 1953), *e.g.*, 7-9, where temporal and local causes are added to the four classic causes, and 67-70, on the first Cause. Six centuries later, the world-view of Mullā Sadra Shīrāzī, which was profoundly monist and emanatist, led him to deny the relationship *ʿilla-maʿlūl* on the level of the constitutive intrinsic causes of quiddity (*māhiyya*), while affirming it all the more vehemently on the level of existence (cf. *Kitāb al-Mashāʿir*, ed. and trans. H. Corbin, Paris-Teheran 1964, 53-4/180-1). "That which is called cause is the origin and source (*aṣl*)"; the absolute Origin is the first Cause (*ibid.*, 41/162).

II. *Falsafa*. The idea of *ʿilla* is common in *falsafa*. Al-Kindī refers to it frequently. Thus a *risāla* on "the proximate efficient cause (*al-ʿilla al-fāʿila al-ḳarība*) of being and corruption" enumerates and defines the four causes, which are here called "natural"—the material cause being called *ʿunṣuriyya* and the final cause *tamāmiyya* (217-8); it then analyses more closely the efficient ("agent", *fāʿila*) cause, and applies the principles thus established. With regard to the "obedience of the heavenly Bodies to God", we find a new list of causes, referring to the final cause, which is not explicitly named (*ibid.*, 247-8); the celestial sphere is called the "proximate efficient cause" of the perishable living creature, "and the efficient cause, as such, is more noble than the thing caused, as thing caused" (248). Al-Kindī also discusses "the cause (*ʿilla*) of fogs" (*ibid.*, ii, Cairo 1372/1953, 76-8), where he uses *asbāb* as a synonym for *ʿilal*, and "the efficient cause of the flow and ebb of the tide" (*ibid.*, 110-33), etc.

Al-Fārābī's vocabulary mingles *ʿilla* in its philosophical sense and *sabab* without much discrimination. Thus in the *ʿUyūn al-masāʾil* (ed. Dieterici, *ap. Alfarabi's Philosophische Abhandlungen*, Leiden 1890, 57): the possible things that are "necessary by virtue of something else" need a cause (*ʿilla*), since they cannot, either infinitely or correlatively, be causes of one another (cf. Ibrahim Madkour, *La place d'al-Fārābī dans l'école philosophique musulmane*, Paris 1934, 79). It is, then, the Necessary Being that brings them into existence, and He can have no cause (*ʿilla*), since He is the first Cause (*al-sabab al-awwal*) of the being of things. The paragraph ends with a short list of the four Aristotelian causes (*ʿilal*). The same mingling of usage occurs in the following part of the text (58-9), which describes the emanation of beings; similarly in the *Treatise on the agreement between Plato and Aristotle* (*ibid.*, 11, 23 and *passim*), etc. A certain preference for *sabab-asbāb* seems to be evident in the *Ārāʾ ahl al-madīna al-fāḍila* (ed. Dieterici, Leiden 1895): chapter 17 on the "original causes (*asbāb*) of the first form and the first matter (*mādda*)", and 22 on the "cause (*sabab*) of the intellection of the rational power".

It is, however, in Ibn Sīnā that we find the clearest restatements and elaborations concerning the causes; they can hardly have failed to have some influence on later Shīʿī thought. They recur regularly in the metaphysical treatises. Without attempting an exhaustive list, we may notice as the most important references: *Shifāʾ*, *al-Ilāhiyyāt*, Cairo 1960, ii, 257-300 ("on the division of the causes and their modalities"), and 327-43 (the demonstration of the exist-

ence of God as first Cause); *Nadjāt*, Cairo 1357/1938, 211-3 and 235-43 (where the usages *sabab-asbāb* and *ʿilla-ʿilal* occur indifferently); *Ishārāt*, ed. Flügel, Leiden 1892, 139-43. To these may be added the shorter summaries of the *Daneshnāma* (French trans. *Le livre de Science*, Paris 1955, 127-33), the *Risāla fi 'l-ḥudūd*, on the words *ʿilla* and *maʿlūl* (*ap. Tisʿ rasāʾil fi 'l-ḥikma wa-'l-ṭabīʿiyyāt*, Cairo 1326/1908, 100-1) and the *Risāla fi 'l-ṭabīʿiyyāt* (*ibid.*, 4), where the term used is *asbāb*.

We cannot hope here to deal in detail with Ibn Sīnā's "Treatise on causes". In any case, he depends directly on the texts of Aristotle, especially Book Δ of the Metaphysics, which he subjects to a most searching analysis (particularly in the *Shifāʾ* and the *Nadjāt*), completing, or rather, going beyond them, and also diverting them in a Neo-Platonic direction. He does not merely give an analytical list of causes, but deals with the actual theory of causality (*ʿilliyya*) and of "causedness" "*causéité*" (*maʿlūliyya*), as Mlle Goichon translates it (*Lexique de la langue technique d'Ibn Sīnā*, Paris 1938, no 451). A few remarks:

(1) In a distinction that became classic (adopted, for example, in the *Taʿrīfāt* of al-Djurdjānī: ed. Flügel, Leipzig 1845, 160), Avicenna calls the intrinsic causes, that is to say, material (*in potentia*) and formal (*in actu*), "the causes of quiddity" (*māhiyya*); the extrinsic causes, efficient and final, are "the causes of existence" (or of being, *wudjūd*) of a thing. "A thing may be caused either with regard to its quiddity or with regard to its existence" (*Ishārāt*, 139). We find here an echo not only of the real distinction between essence and existence but also of Avicenna's "extrinsicism", in which existence "happens" to essence.

(2) The efficient cause (*al-ʿilla al-fāʿila*) is considered as the determining constitutive of the existence of a thing; this is a direct application of the major thesis that any possible thing that is brought into existence is necessary *ab alio* (a statement already found in al-Fārābī). In the treatise in the *Shifāʾ* (*Ilāhiyyāt*, ii, 357), Ibn Sīnā distinguishes in this regard between the "physicists", who see a motive cause in the *ʿilla fāʿila*, and the *falāsifa*, who define it as causing the beginning of, and maintaining, being; he adds that this is the position of the Creator *vis-à-vis* the world. He afterwards affirms the existence of God as first efficient Cause, which creates all being of things (cf. *Ishārāt*, 140), and no longer only the motive Cause, as in Aristotle. It is possible to see in this a source for Thomas Aquinas's "second way".

(3) Stress is laid on the final (*ghāʾiyya*) cause, which, in a strongly emphasized formula (*Ishārāt*, 139), is called "the efficient cause of the efficient causes" (cf. the text from the *Rasāʾil al-Kindī* already cited, i, 248). It is the cause of the causes (*Shifāʾ*, *Ilāhiyyāt*, ii, 292). As Ibrahim Madkour remarks in his introduction to the edition of the *Ilāhiyyāt* (17), Ibn Sīnā, making an analysis of the four causes from this point of view, attempts to lead them all back to the final cause (*ibid.*, ii, 294-8). The interrelationship between the efficient cause and the final cause is no less penetratingly defined. It is "by virtue of its quiddity" that the final cause is a cause, and "the idea that it represents belongs to the causality of the efficient cause" (*Ishārāt*, 140; trans. A.-M. Goichon, Paris-Beirut 1951, 356), for it is, inasmuch as it exists, caused by the latter. There is, then, an incessant interaction between the two extrinsic causes.

(4) The affirmation of the existence of God as absolute first Principle follows from the demonstration first of the impossibility of an infinite number, in actuality, of efficient and material causes and then of the impossibility of an infinite number of final causes (*Shifāʾ*, ii, 327-43; cf. *Ishārāt*, 141-2). God is thus called "absolute first Cause" (*ʿilla ūlā muṭlaḳa*) and "Cause of all other causes" (*Shifāʾ*, ii, 340). He is, without doubt, the supreme efficient Cause, since He is the Principle (*mubdiʾ*) of all being and of all contingent being, while transcending in some way any distinction of efficiency-finality in "absolute innovation" (*ibdāʿ muṭlaḳ*). In itself the thing caused is non-existent (*lays*); its cause makes it exist (*ays*) (*ibid.*, 266).

(5) The relationships of concomitance and anteriority between cause and thing caused recur frequently in the treatises of Avicenna. The principal distinction is as follows: there is anteriority of sense (*maʿnā*; we find later "anteriority of nature"), but not of time (*zamān*). In time, the cause is really such, in actuality, only as a concomitant of the thing caused, and the latter exists, in actuality, only through the existence of the cause (*ibid.*, 261). If, then, the thing caused is removed the cause is removed (*Risāla fi 'l-ḥudūd*), and vice versa, at least as far as the cause in actuality (*bi-'l-fiʿl*) is concerned. A cause in potentiality (*bi-'l-ḳuwwa*) can be anterior to its effect (the joiner before he works his wood; cf. *Nadjāt*, 212-3); it can outlive it or disappear before it. A cause always in actuality, however, cannot exist without its effect, and this effect cannot exist without its cause. In consequence, God, the absolute Principle and the supreme Cause, Who is always in actuality, cannot not produce the world from all eternity. The existential determinism of *falsafa*, and the eternity of the contingent world, eternally "commenced" (*ḥādith*), are based on the reciprocal relationship of cause and thing caused, defined thus.

(6) The vocabulary used by Ibn Sīnā is a supple and rich one. (a) Together with *ʿilla* and *maʿlūl* the more traditional terms *sabab* and *musabbab* also occur frequently—sometimes in the etymological sense: cause as intermediary or occasion, sometimes as a synonym for *ʿilla*. (b) While the efficient and formal causes are always called *fāʿila* and *ṣūriyya*, the material cause refers rather to *hayūlā* (first matter) than to *mādda*. This latter term, however, is also used (usually as "second matter", already with form), and sometimes *ʿunṣur*, "element", in the sense of "first receptacle" (*al-ʿilla al-ʿunṣuriyya* is an expression already found in al-Kindī). The final cause is called *ghāʾiyya*, but *tamāmiyya* is not excluded. (c) In the course of elaboration (thus *Nadjāt*, *ibid.*) there are distinguished the cause *per se* (*bi-'l-dhāt*), the accidental (*bi-'l-ʿaraḍ*) cause, the proximate (*ḳarība*) cause and the distant (*baʿīda*) cause, the particular (*djuzʾiyya*) cause and the general (*ʿāmma*) or universal (*kulliyya*) cause, the receptive (*ḳābila*) and the dispositive cause... A resumé and an important application of Avicenna's theory of causes appear in the *Kitāb al-Nafs* of the *Shifāʾ* (ed. F. Rahman, Oxford 1959, 228-9), where it is stated that the body and the soul are not in the same relationship as cause and thing caused; that the body can be only the receptive and accidental cause of the soul, and that the soul receives existence only through "separate causes" (*al-ʿilal al-mufāriḳa*).

It would be interesting to compare Avicenna's analyses and the corresponding ideas of S. Y. Suhrawardī, for example, in his *Kitāb Ḥikmat al-ishrāḳ*

(ed. H. Corbin, Paris-Teheran 1952, 62-3, 91, 94-6, 147-8, 184, 186, 195); they have a basis of common ideas, but the latter exhibits a greater independence of the Aristotelian source and forges a closer link between the theory of emanation (and its descent from the luminaries) and the idea of cause; whence the expressions "effusive (*fayyāḍa*) cause", "illuminating (*nūriyya*) cause" and "existential illuminating (*wuḏjūdiyya nūriyya*) cause" (195). The *ʿilla* becomes the effusion from the "victorious luminaries", in which cause and thing caused correspond in an intellectual (*ʿaḳlī*) priority, "but not a temporal one; cause and thing caused remain both together in time" (63).

If we turn now to western *falsafa*, we find an equally frequent use of causes (*ʿilal*) and of the principle of causality, the ideas and vocabulary of which are well established. Thus, a whole theory of causes can be extracted from the writings of Ibn Rus̲h̲d, not only in his commentaries on Aristotle but also in the *Tahāfut al-tahāfut*, when he is replying to al-G̲h̲azālī concerning the eternity of the world (ed. Bouyges, Beirut 1930, 4 ff.; cf. Eng. tr., S. van den Bergh, London 1954, i, 3 ff.). Reference to the four Aristotelian causes leads Ibn Rus̲h̲d to state that the very idea of cause is analogical, and that only efficient causality is appropriate to the first Cause that produces the world. He also emphasizes that the infinite regression of causes is impossible as far as causes *per se* and direct causes are concerned, that is to say, "if every cause is a condition of the existence of that which follows from it"; this regression is not, however, impossible for causes *per accidens* and "circular" causes. It should be added that, the more Ibn Rus̲h̲d reacts against the Neo-Platonism of his eastern (and Mag̲h̲ribī) predecessors, the closer he comes, on the subject of causes, as on so many others, to the historical Aristotle.

III. *ʿIlm al-kalām*. When it began, *ʿilm al-kalām* was scarcely aware of the "theory of causes". When it encountered the idea, or one very similar, moreover, it expressed it by *asbāb*, not by *ʿilāl*. Originally, the problem is not the relationship between first Cause and second cause, but the production of "commenced" actions, especially human actions. The various answers of the Muʿtazilī, As̲h̲ʿarī and Ḥanafī-Māturīdī schools are known [see ALLĀH, II, B]. Whereas the Muʿtazilis affirm the efficacy of the created agent on his effects, the predominant lines of the other schools hold to a non-necessary sequence of *sabab* and *musabbab*, directly created by God, without intrinsic efficacy (*g̲h̲ayr taʾt̲h̲īr*) of the first on the second.

In order to combat eastern *falsafa* in the *Tahāfut al-falāsifa*, al-G̲h̲azālī was obliged to borrow its ideas and vocabulary concerning cause and thing caused. Under the same influence, the usages *ʿilla*, *ʿilliyya*, *maʿlūl* and *maʿlūliyya* appear more and more frequently in the major manuals of the following period, in general towards the end of the "philosophical preambles". An example of this is the *Muḥaṣṣal* of Fak̲h̲r al-Dīn al-Rāzī (Cairo n.d.), where the four causes are mentioned (89-90), and a chapter is devoted to "cause and thing caused" (104-6). The *Mawāḳif* of ʿAḍud al-Dīn al-Īdjī, and the commentary on these by al-Ḏjurdjānī, elaborate the same subject at some length (*S̲h̲arḥ al-mawāḳif*, ed. Cairo 1325/1907, iv, 98-201). An analysis of the causes and a long discussion on the relationship between cause and thing caused are to be found there. The predominating idea is that "causes" are only the "condition" (*s̲h̲arṭ*) of their effects, and that there can be no efficacy (*taʾt̲h̲īr*) of the first on the being of the second. It is with reference or non-reference to *taʾt̲h̲īr* that al-Ḏjurdjānī, in his *Taʿrīfāt* (ed. Flügel, Leipzig 1845, 160 and 121) appears to distinguish the ideas of *ʿilla* and *sabab*.

Later on, the vocabulary does not retain this precision, and the term *ʿilla* goes somewhat out of favour. The *Muḳaddima* of Ibn K̲h̲aldūn speaks only of *asbāb*. The contemporary manuals, such as the *Muḳaddimāt* of al-Sanūsī of Tlemcen or the *Ḥās̲h̲iya* (. . .) *ʿalā Ḏjawharat al-tawḥīd* of al-Bādjūrī, condemn the Muʿtazilīs and the *falāsifa* (the latter more strongly than the former) for a *s̲h̲irk al-asbāb*, associating an operation of second causes with the divine Omnipotence (see *Muḳaddimāt*, ed. and trans. Luciani, Algiers 1908, 92-5, 108-13). The existence of *asbāb* is not denied, but they have no efficacy (*ʿadam taʾt̲h̲īrihā*) on the "effect" with which "they usually coincide".

The affirmation of a *taʾt̲h̲īr* of the cause on the thing caused, even when it is the result, as the Muʿtazilīs claim, of a "commenced power" (*ḳudra ḥādit̲h̲a*) created by God in the agent, is still considered by As̲h̲ʿarism as being in opposition to the Power of God, or at least confining it. This entrenched position has weighty consequences for the problem of human freedom, which it leads its followers to deny. It may be asked, however, if it does not stem from a misunderstanding. Avicenna's theory of causes, for example, and his analysis of the very idea of causality is one thing; another, a view of the world dominated by a creation-emanation, doubtless willed by the first Being, but which is necessary and thus eternal. For Ibn Sīnā, as we have seen, a cause in actuality cannot not produce its effect, and maintain it, by its intrinsic efficacy. This is true, according to him, for the relationship of God with the world, but equally true for the action of second causes, which, in his view, thus remain part of an absolute existential determinism. Consequently, to admit the *taʾt̲h̲īr*, the influence, of the cause on the thing caused appears to the *mutakallimūn* as a denial of the divine free Will and free Action. The two questions of the intrinsic reality of the causal relationship and of the freedom of God in His creative Act (and thus of his transcendance of the created thing) are thus blocked together in the discussions of the schools.

Bibliography: in the article. (L. GARDET)

ʿILLIYYŪN (genitive *ʿilliyyīn*) is used in Sūra LXXXIII, 18 to mean the place in the book where the deeds of the pious (*abrār*) are listed. In the two following verses (19 ff.) *ʿilliyyūn* is described as an inscribed book (*kitāb marḳūm*). In verse 21 it is said of this book that those close (to God) bear witness to it. Correspondingly in verse 7 of the same Sūra the place in the book where the deeds of evil-doers are chronicled is called *sidjdjīn*. In the two following verses (8 ff.) *sidjdjīn* too is defined as an inscribed book. In Ṭabarī's view *ʿilliyyūn* may be identified with the seventh heaven or the right foot of the divine throne, or some other place in heaven. He gives no explanation of the fact that *ʿilliyyūn* and *sidjdjīn* are themselves described both as books and as the place where the book of the pious or the book of the evil-doers may be found. Zamak̲h̲s̲h̲arī assumes that the book in which the deeds of evil-doers or the pious are recorded is, so to speak, a part of a main book (*kitāb djāmiʿ*, *dīwān*) which is called *sidjdjīn* or *ʿilliyyūn*.

The Arabic *ʿilliyyūn* is undoubtedly derived from a misunderstanding of the Hebrew *ʿelyōn* (the highest). "Mohammed's mistake can perhaps be explained on the following ground, that he had learned that the book in which were recorded the deeds of men was kept by the *ʿelyōnim*; for this is the name which is frequently applied to the heavenly beings, who are called *taḥtōnim*; *e.g.*, in Ketubot 104a. At any rate, it is certain that Mohammed heard the word from Jews" (Horovitz).

ILLUMINATIONS [see kitāb and taṣwīr].

ʿILM (a.) "knowledge", the opposite of *djahl* "ignorance", is connected, on the one hand, with *ḥilm* [*q.v.*], and on the other hand with a number of terms a more precise definition of which will be found in the relevant articles: *maʿrifa, fiḳh, ḥikma, shuʿūr*; the most frequent correlative of *ʿilm* is however *maʿrifa*. The verb *ʿalima* is used in the Ḳur'ān both in the perfect and in the imperfect, and also in the imperative, with the meaning of "to know", but in the imperative and in the perfect it seems often to mean basically "to learn" (without effort, the fifth form *taʿallama* being used when a nuance of laborious study is implied); *ʿilm* is the result of this action. *ʿArafa* means "to know" but, perhaps as a result of the particular meaning of certain early derivatives such as *ʿārif* or *ʿarrāf* (see T. Fahd, *Divination*, index; al-Djāḥiẓ, *Tarbīʿ*, index), a difference appeared at an early date in Muslim thinking between *maʿrifa* and *ʿilm*, the first tending to be used of knowledge acquired through reflexion or experience, which presupposes a former ignorance, the second a knowledge which may be described as spontaneous; in other words, *maʿrifa* means secular knowledge and *ʿilm* means the knowledge of God, hence of anything which concerns religion. In fact these distinctions are quite artificial and it is doubtful even whether a semantic study of the two terms based on an extensive collection of examples would throw any light on this problem, so personal is the way in which the different writers use them and so varied according to their various disciplines. In the field of mysticism, the relations between *ʿilm* and *maʿrifa* will be dealt with under maʿrifa and taṣawwuf; the theory of knowledge on the philosophical and theological plane will also be covered in the article maʿrifa. We merely state here that *ʿilm* had to fit in with the exigencies of the system of the *mutakallimūn*, who assigned to it a place in the schema of the Aristotelians; *ʿilm* is an accident (*ʿaraḍ*) characterized by life (*mukhtaṣṣ bi 'l-ḥayāt*) and forming, with the will, power, etc., part of the class of the modalities (*kayfiyyāt*) of the inferior appetitive soul (see al-Īdjī, *Mawāḳif*, with the commentary by al-Djurdjānī, Būlāḳ 1266, 272 ff.; al-Tahānawī, *Dict. of techn. terms*, 1055-66). *ʿIlm* is either eternal (*ḳadīm*) or produced within time (*ḥādith, muḥdath*), according to whether it exists in God or in a created being, and there is no analogy between these two types. The *mutakallimūn*, who made a distinction between *ʿilm* and *maʿrifa*, used the first term in referring to the composite and to the universal, and *maʿrifa* for objects which are simple (*basīṭ*; see al-Djurdjānī, *Taʿrīfāt*, s.v.) and particular (al-Taftazānī, on al-Nasafī, 40).

On the theological plane another difference concerns the relations between *ʿilm* and *ʿamal*, "works"; there is in fact a *ʿilm naẓarī*, such as the knowledge of things, and anyone who possesses it may stop at that, and a *ʿilm ʿamalī*, knowledge of religious obligations (*ʿibādāt*), which is complete only when these obligations are fulfilled (al-Rāghib, *Mufradāt*, 348). Al-Ḳarafī's explanation in the *Tanḳīḥ* (Cairo 1306, 193) is somewhat different: whoever possesses the knowledge of things and does not act according to what it teaches is only half obedient, whereas he who possesses it and also acts according to it has a double merit.

On a more general plane, *ʿilm*, applied to knowledge of a religious character, is contrasted both with *maʿrifa*, in the sense of profane knowledge, and with *adab* [*q.v.*], the meaning of which it is difficult to define precisely, but which refers in particular to a literary and professional training rather similar to *maʿrifa*. The active participle, *ʿālim*, acquired at the same time the meaning of a scholar learned in religious matters [see ʿulamā'], and then, at a later period, simply scholar, for which formerly other terms were used (in particular *ḥakīm*), whereas *ʿilm* acquired at a much earlier date that of learning in general.

It is true that in the expression *ṭalab al-ʿilm* the last word was regarded by the majority of Muslims as meaning "traditions" the search for which had involved long journeys, but it is doubtful whether the Prophet intended simply to allude to this activity in the numerous *ḥadīth*s exhorting the faithful to seek for *ʿilm* ("even in China"); therefore in the traditions in question this word should be translated by "knowledge", just as it should be given the meaning of "learning" in texts dating from the first centuries of Islam. Furthermore the arts and the sciences were made, first by the philosophers and then by various thinkers and writers, the object of a series of lists (*iḥṣā' al-ʿulūm*) and classifications of the sciences (*marātib al-ʿulūm*), the evolution of which from the 3rd/9th century to today is particularly instructive: L. Gardet and M.-M. Anawati have drawn up a very instructive table of them in their *Introduction à la théologie musulmane*, Paris 1948, 101-24, where, in considering the place of *kalām* in the organization of knowledge, they present the various classifications of al-Fārābī, of the Ikhwān al-Ṣafā', of al-Khuwārizmī, of Ibn al-Nadīm, al-Ghazālī, Ibn Khaldūn, mentioning also those of Avicenna (102, note 2) and of Djirdjī Zaydān; to this table there may be added: Ibn Ḳutayba (G. Lecomte, *Ibn Qutayba*, Damascus 1965, 443-9); Abū Ḥayyān al-Tawḥīdī (see M. Bergé, in *BEO*, xviii (1963-4), 241-99); Ibn Ḥazm (*Marātib al-ʿulūm*, ed. S. al-Afghānī), Miskawayh (*K. al-Saʿāda*, Cairo 1928, 48-60), and probably some other writers.

It is surprising, on examining these lists, to see the relative importance given to the Arabo-Islamic sciences and the foreign sciences, the latter occupying progressively less space as the dates get later. Al-Ghazālī (d. 505/1112) seems to have played in this field a determining role by establishing a clear distinction between praiseworthy (*maḥmūda*) and blameworthy (*madhmūma*) sciences, the latter including all the disciplines considered to be useless,

even harmful, to life on this earth and to the health of the soul in the hereafter (see *Iḥyāʾ*, book i, ch. i-v). A similar conception is merely the application of a badly interpreted saying, according to which the true Muslim must "pay no attention to that which does not concern him" (*tark mā lā yaʿnīh*; see I. Goldziher, *Muh. St.*, ii, 157), and this attitude of mind clearly explains the indifference of Islam towards many of the sciences whose interest is not immediately obvious.

The general tendency did not however prevent a number of Muslims from transmitting the heritage of antiquity while adding to it their own contribution. Details of the various disciplines will be found in the articles on mathematics (AL-DJABR WA 'L-MUḲĀBALA; ʿILM AL-ḤISĀB), mechanics [ḤIYAL], astronomy [ASṬURLĀB; FALAK; ʿILM AL-HAYʾA], medicine [ṬIBB], botany [NABĀT], alchemy [KĪMIYĀʾ], zoology [ḤAYAWĀN], etc., while for general surveys of the history of the sciences in the Muslim world there may be consulted G. Sarton, *Introduction to the history of science*, Baltimore 1927-31, 2 vols.; A. Mieli, *La science arabe*, Leiden 1938; P. Kraus, *Ğābir ibn Ḥayyān, Contribution à l'histoire des idées scientifiques en Islam*, Cairo 1942-3, 2 vols.; L. Massignon and R. Arnaldez, *La science arabe*, vol. ii of the *Histoire générale des sciences*, Paris 1957, 2nd ed. 1966.

Bibliography: In the article. (ED.)

ʿILM AL-DJAMĀL, "aesthetics". A general theory on what is known as *ʿilm al-djamāl* and precise definitions of the terms used in this field are lacking in the history of Arabic civilization: nevertheless, it is possible to trace certain features common to the elements of aesthetic emotion and to their formal expression. Poetry, the outstanding genre of Arabic art, conforms to a certain ideal both in its contents and in its structure. With early poetry it is mainly in the *ghazal* that the poet expresses his feelings about ideal beauty; the same attributes are applied to all women, to the extent that it becomes doubtful whether the description is of a real person or of a fictional creature (Imruʾ al-Ḳays, *Dīwān*, Cairo 1958, 15, 16, 17, 29, 30; Ṭarafa, *Dīwān*, Beirut 1961, 20, 21; al-Nābigha, *Dīwān*, Beirut 1960, 39-42; al-Aʿshā, *Dīwān*, Beirut 1960, 144, 145; ʿAbd Allāh b. ʿAdjlān, in *Sharḥ Dīwān al-ḥamāsa*, Cairo 1952, ii, no. 476). These descriptions are limited to physical beauty, with the exception of rare allusions to spiritual and moral qualities (al-Shanfara, in *Aghānī*, Beirut 1961, xxi, 209, verses 7-10; ʿAntara, in *Shuʿarāʾ al-Nasrāniyya ḳabl al-Islām*, Beirut 1967, 809, v. 5; al-Aʿshā, *op. cit.*, 144, v. 7; al-Nābighā, *op. cit.*, 41, v. 6; Ḳays b. al-Khaṭim, in *Aghānī*, iii, 23, verses 3, 9, 10). From these details there become apparent certain elements of Arab aesthetics such as the symmetry between the two halves of the body produced by slender hips, the contrasts of forms and colours: the hair (*fāḥim*) and the face (*abyaḍ*), the lips (*lamyāʾ*) and the teeth, the cornea and the iris (*ḥawar*), the fingers and the nails (*khaḍīb*). This ideal of beauty seems not to be a peripheral aspect but the expression of the Arab soul which is revealed in the very structure of the *Muʿallaḳāt*. The interest taken in the details of the separate parts of the body is echoed in the care given to each verse seen as a unity achieved within the poem as a whole. The latter is a collection made up of these unities which are independent and continuous, but unified by a single rhyme and dominated by one general sentiment. These structural principles appear in the arts of Islam and constitute, in a certain sense, the primary image of the arabesque.

Islam enlarged the idea of beauty by inviting its adherents to contemplate universal beauty. Nevertheless there persisted the formal ideal celebrated by the earlier poets. On the other hand, the moral and intellectual aspect made necessary by social evolution become a main theme in the *ghazal* of this period (R. Blachère, *Les principaux thèmes de la poésie érotique au siècle des Umayyades de Damas*, in *AIEO Alger*, v (1939-41), 82-128). The influence of religion in the artistic field was very small, since art and morals formed two different fields. Thus the poetry of Ibn Abī Rabīʿa was admired in spite of its eroticism (*Aghānī*, i, 113), and naked figures were represented in the frescoes and sculptures of the Umayyad castles (R. Ettinghausen, *Arab painting*, Geneva 1962, 31; D. Schlumberger, *Ḳaṣr al-Ḥayr al-Gharbī*, Ar. tr., Beirut 1945, pl. 18e). It is interesting to note that the principles of unity and continuity were manifested in the mosques with their forest of columns and that symmetry appears evident in the plans of the Ḳubbat al-Ṣakhra, of Ḳaṣr al-Ṭūbā, of Mshatta and in the décor of its façade. There should also be noted the contrast of the light and dark colours in the frescoes of Ḳaṣr al-Ḥayr al-Gharbī (Creswell, *A short account of Early Muslim Architecture*, 1958, 124 ff.; D. T. Rice, *L'art de l'Islam*, Paris 1966, 21 ff.).

The idea of beauty underwent certain modifications under the ʿAbbāsids. Most characteristic of it during this period were the tendency to equilibrium, the interest accorded to spiritual beauty and the importance given to the harmony of the body (Ṣ. al-Munadjdjid, *Djamāl al-marʾa ʿind al-ʿArab*, Beirut 1958, 35-40). Beauty was a favourite subject of *adab*. Although it did not constitute an *ʿilm*, *djamāl* was nevertheless a knowledge of some depth; whence the expression *al-baṣar bi 'l-djawārī*. The evolution of the study of human beauty has influenced literary criticism to the extent that we have Ibn Rashīḳ allowing a reduced form of *ziḥāf* to be compared to certain faults praised in the *djāriya* (*al-ʿUmda*, Cairo 1934, i, 117). Literary criticism, given the lack of art criticism, illustrates the characteristics which are found in the *ghazal* and in the arts in general. It is a formal criticism expressed in concrete terms which may often be applied either to a person or to an expression (al-ʿAskarī, *Ṣināʿatayn*, Istanbul 1320, 131; Ibn Rashīḳ, *op. cit.*, i, 106). The critics (al-ʿAskarī, *op. cit.*, 202; Ibn Rashīḳ, *op. cit.*, ii, 5) insisted on symmetry (*tawāzun*, *tawāzī*) and contrast (*takāfuʾ*, *ṭibāḳ*). Their analysis is only a partial one, since it deals not with the poem but with words, verses or expressions (Ibn al-Athīr, *al-Mathal al-sāʾir*, Cairo 1312, i, 384, 386; al-Djurdjānī, *Dalāʾil al-iʿdjāz*, Cairo 1321, 31 ff.). The separation of art and religion which became the rule from the Umayyad period onwards is sufficiently clear in ʿAbbāsid criticism (Ḳudāma, *Naḳd al-shiʿr*, Cairo 1948, 14; al-Djurdjānī, *al-Wisāṭa*, Sidon 1331, 57, 58). These same features can be found in the arabesque, in which the continued repetition of a single decorative theme corresponds to the verse in the poem and the column in the mosque, in which abstraction is only a form of Arab idealization, where art has no goal outside itself, and where the unity of the whole is in agreement with a certain tendency towards unity in the attitude of the critics (Ibn al-Athīr, *al-Mathal al-sāʾir*, Cairo 1312, 268; Ibn Ṭabāṭaba, *ʿIyār al-shiʿr*, Cairo 1956, 17, 111).

These artistic realities and these critical judgements are echoed in the works of the theorists. Ibn Sīnā expresses the sensory character of the beautiful and distinguishes the art of the good and of the useful (cf. I. Ismāʿīl, *al-Usus al-djamāliyya fi 'l-naḳd al-adabī*, Cairo ²1968, 140 ff.); al-Tawḥīdī puts forward the idea of relativity in aesthetic judgement and cites five different bases of the beautiful and of the ugly: [human] nature, custom, [religious] law, reason and passion (*al-Imtāʿ wa 'l-muʾānasa*, Cairo 1953, i, 150); al-Ghazālī explains the attraction of the beautiful by the pleasure which it gives and the repulsiveness of ugliness by the pain which it causes; although he bases aesthetic emotion on the senses, al-Ghazālī makes clear the religious and philosophical aspect of his thought; for "spiritual beauty perceived through reason is nobler than the beauty of images perceived through sight". He reaches the core of the problem when he maintains the relativity of the beautiful in the object and in the person who contemplates it and when he rejects the elements of beauty in favour of sympathy (*Iḥyāʾ*, Cairo n.d., iv, 296 ff.).

Later, *djamāl* tends to become a *ʿilm*, but only in the field of human beauty. Ibn Abī Ḥadjala al-Maghribī attempts to define the terms used in this field, such as *djamīl, ḥasan, malīḥ*, etc., and to establish a canon of ideal beauty formed of eight groups of four. One of the eight groups is concerned with morals (*Dīwān al-ṣabāba*, Cairo 1279, 31, 32; Bibl. Nat. Paris, MS no. 3348, fol. 70). In the East, al-Ghuzūlī established a canon in twenty groups of four (*Maṭāliʿ al-budūr*, 1299, i, 268). The seven groups which are common to the two canons show slight variations which do not alter the general conception. It is nevertheless important to point out that these later canons, one western and the other eastern, are similar in their general conception, the beauty celebrated by the earliest Arab poets ten centuries previously.

(S. KAHWAJI)

ʿILM AL-HANDASA [see Supplement].

ʿILM AL-HAYʾA, the "science of the figure (of the heavens)" or astronomy (which is also known by several other names in Arabic), is that branch of knowledge which deals with the geometrical structure of the universe, which determines the laws governing the periodic motions of the celestial bodies, which devises cinematic models to describe these motions, which reduces them to tabular form so that a computer can, with as much precision and ease as possible, determine the positions of the heavenly bodies as seen from any particular locality on the surface of the earth, and which invents and employs the instruments necessary to guarantee the utmost accuracy in observations.

The geometrical structure of the universe, as conceived by Muslim astronomers after about 800 A.D., by and large coincides with that expounded by Ptolemy in his *Almagest*. The earth rests motionless near the centre of a series of eight spheres which encompass it. The eighth sphere, studded with the fixed stars which were duly catalogued by such scholars as al-Ṣūfī (d. 376/986), revolves daily from East to West; it also moves in the opposite direction at an appropriate rate of precession, or oscillates with a motion termed trepidation (this theory is primarily known through Thābit b. Ḳurra and various Spanish astronomers). The spheres of the five "star-planets", which are eccentric to the centre of the earth, revolve in such a fashion that their centres of uniform motion (equants) are not identical with their geometric centres; the model of Mercury has, as a special arrangement, a "crank mechanism" which produces two perigees in its orbit. On the surface of these spheres are situated the centres of the planets' epicycles. The model of the Sun, however, involves only an eccentric circle, while that of the Moon utilizes both a "crank mechanism" which causes the centre of its deferent to revolve about the centre of the earth, and an epicycle in which the anomalistic motion is counted not from the epicyclic apogee, but from a point on the line extended from the "opposite point" on the circumference of the "crank mechanism" through the centre of the epicycle. Muslim astronomy is largely concerned with expounding the intricacies of this system and with refining the parameters which transform it from a qualitative to a quantitative model of celestial motions; the core of the *zīdj*es is constituted by the tables based on the regular motions of the various parts of the model and their determined parameters. It might be well to mention here that the translations of Indian and Sasanian astronomical books to which reference will shortly be made contributed methods of computation, parameters, and tables to Muslim astronomy rather than geometrical models of the planetary orbs (Yaʿḳūb b. Ṭāriḳ's *Tarkīb al-aflāk* is an exception to this rule); thus they did not modify the Ptolemaic view of the heavens outlined above.

Following the author of the *Almagest*, Muslim astronomers generally regarded the whole system purely as a mathematical construct having no necessary physical counterpart. But Ibn al-Haytham [*q.v.*] (d. 430/1039), continuing a tradition already begun in the second book of Ptolemy's own *Hypotheses*, argued that the models in the *Almagest* are in fact physical realities. The problem facing those who accepted this view was one of reconciling these models with Aristotelian physics, in which only uniform circular motion concentric with the centre of the earth is possible for celestial bodies. Spanish philosophers, beginning with Ibn Bādjdja (d. 533/1138-9) and continuing with Ibn Ṭufayl, Ibn Rushd, and al-Biṭrūdjī [*qq.v.*], attempted to solve this problem either partially by eliminating the epicycles, or wholly by removing both epicycles and eccentric circles from the etherial parts of the universe. The results of their efforts were not astronomically impressive. But the problem was approached from a more realistic standpoint in Marāgha, Tabrīz, and Damascus in the late 7th/13th century and the early 8th/14th. There the goal was only to eliminate the most non-Aristotelian elements in the Ptolemaic system—the equants and the Moon's "opposite point"—so that the motions of the heavenly bodies might be explained exclusively as the combinations of uniform circular motions. The success of the School of Marāgha and the later influence of its solutions will be touched upon below.

The Arabs had not always been endowed with a knowledge of Ptolemaic astronomy, however. In the pre-Islamic period and in the first century of Islam the only reflections of any *ʿilm al-hayʾa* among them are a very crude method of telling the time of night by means of the twenty-eight lunar mansions (*manāzil al-ḳamar*) and a rough estimation of the seasons by means of their heliacal risings or cosmic settings (*anwāʾ*). But in the 2nd and 3rd centuries from the Hidjra—that is, at the end of the Umayyad Dynasty and in the first one hundred and fifty years of the ʿAbbāsid—numerous texts on astronomy (and

on astrology involving a knowledge of astronomy) were translated into Arabic from Sanskrit, Pahlavi, Greek, and Syriac. For the first half or so of this period of translation Arabic astronomers were extremely eclectic, and this trend toward eclecticism continued to be strong for a much longer period in certain areas such as Spain. But the introduction of Ptolemy's rigorous methods and geometrical proofs at the beginning of the 3rd/9th century led to a rapid growth of observational astronomy, designed partly to investigate the discrepancies among the Greek, Iranian, and Indian systems, and partly to improve the Ptolemaic parameters. With the gradual recognition of the superiority of the Ptolemaic system, at least within the terms of the strongly Greek-oriented intellectual atmosphere that developed in Islam, the *Almagest* usurped a position of unchallenged preeminence in the estimation of most Muslim astronomers. This process was completed by the time of the publication of his *Zīdj al-Ṣābiʾ* by al-Battānī in about 900 A.D.; and, despite the Indianizing tendencies of the Andalusians, the attacks of the Aristotelians, and the successes of the School of Marāgha, Ptolemy remained in his position of dominance until the introduction of modern Western astronomy in fairly recent times.

The translations from Sanskrit.

The earliest translation of a Sanskrit astronomical text into Arabic was apparently that of the *Zīdj al-Arkand* (*arkand* is a corruption of the Sanskrit *ahargaṇa*) made in Sind shortly after 117/735; on it were based two other *zīdj*es, the *Zīdj al-Hazūr* and the *Zīdj al-Djāmiʿ*, both composed in Ḳandahār in the 2nd/8th century. The elements of the *Zīdj al-Arkand* evidently were largely derived from the *Khaṇḍakhādyaka* written by Brahmagupta of Bhillamāla in A.D. 665, though it was also influenced by the *Zīdj al-Shāh* of Yazdidjird III (632-652), which, like the *Khaṇḍakhādyaka*, belongs to the Midnight School (*ārdharātrika*) of Āryabhaṭa (b. 476).

In 742 yet another Sanskrit *zīdj* was translated into Arabic. This work, composed in verse in imitation of the Indian texts, was given the name *Zīdj al-Harḳan*, wherein *harḳan* clearly represents another corruption of the Sanskrit *ahargaṇa*. This *zīdj* was based on the Sunrise School (*audayika*) of Āryabhaṭa —*i.e.*, on the *Āryabhaṭīya* that he wrote in 499.

The most important translation from Sanskrit into Arabic, however, was that of the *Mahāsiddhānta* belonging to the School of Brahma (*brāhmapakṣa*); the *Mahāsiddhānta* was primarily based on the *Paitāmahasiddhānta* (first half of the fifth century) of the *Viṣṇudharmottarapurāṇa* and on the *Brāhmasphuṭasiddhānta* written by Brahmagupta in 628, though some elements derived from the *Āryabhaṭīya* are discernible in its fragmentary remains. The occasion for the translation was provided by the visit to the court of al-Manṣūr at Baghdād of an embassy from Sind in 154/771 or 156/773; the translator is alleged to have been al-Fazārī, who, in his *Zīdj al-Sindhind al-kabīr*, mixes Iranian material in with the Indian. Al-Fazārī also wrote a *Zīdj ʿalā sinī al-ʿArab*, based on his earlier work, which must have been the first set of astronomical tables to employ the Arabic calendar; the date of this work is c. 790. Another scholar who evidently had independent access to the *Mahāsiddhānta*, Yaʿḳūb b. Ṭāriḳ, composed a *Tarkīb al-aflāk* in 777 or 778 A.D. as well as a *zīdj* and a *Kitāb al-ʿilal*, all of which reflect a mixture of Indian and Iranian elements. These works of al-Fazārī and of Yaʿḳūb constitute the basis of the *Sindhind* tradition, which will be discussed further below.

At some time around 800 another Arabic version of the *Āryabhaṭīya* known as the *Zīdj al-Ardjabhar* began to circulate among Muslim astronomers. The only one to follow it was apparently one Abu 'l-Ḥasan al-Ahwāzī, though it was also certainly known to Abū Maʿshar [*q.v.*] (d. 272/886). None of the works mentioned in this section or in the next, it should be noted, is extant; the account given here, then, may well be in need of some revision, and certainly will not be free from controversy.

The translations from Pahlavi.

Sasanian literature on astronomy, like that on astrology (both are known primarily through Arabic translations and adaptations), was an amalgamation of Greek and Indian material. Ptolemy's *Almagest* existed in a Pahlavi translation already in the third century, and a text belonging to the Midnight School of Āryabhaṭa was available by 556; one belonging to the *brāhmapakṣa* may have been known as early as 450. The "Royal Astronomical Tables" or *Zīk i Šahriyārān* as revised for Anūshirwān in 556 was used by Māshāʾallāh in c. 780-810 A.D., but may never have been translated into Arabic. The later version, published under Yazdidjird III, was turned into Arabic, however, by one al-Tamīmī under the title *Zīdj al-Shāh*. This was drawn upon by al-Fazārī (especially for its planetary equations) and by Abū Maʿshar; manuscripts of it were still circulating in the time of al-Bīrūnī [*q.v.*].

The translations from Greek and Syriac.

The most important Greek text on astronomy translated into Arabic was, of course, the *Almagest* of Ptolemy; translations were made from both the original Greek and a Syriac version. That due to al-Ḥadjdjādj in the first years of the 3rd/9th century exercised a strong influence over the astronomers gathered together by al-Maʾmūn; but the most authoritative version was that produced by Isḥāḳ b. Ḥunayn and corrected by Thābit b. Ḳurra [*qq.v.*]. During the course of the 3rd/9th century Ptolemy's *Hypotheses*, Theon's "Handy Tables", and the corpus of minor Greek astronomical writings known as the "Little Astronomy" (or later, when it became conventional to begin the study of astronomy by mastering Euclid's *Elements*, as the "Middle Astronomy") were also translated into Arabic, and a number of treatises on the astrolabe based on Greek and Syriac sources were published. This material, to a greater or lesser extent influenced by the translations from Sanskrit and Pahlavi (the most impressive influence is to be seen in the Muslim development of a trigonometry far more effective than Ptolemy's out of the Indian system which employs only the sine, cosine, and versine functions), forms the central core of Islamic astronomy after the ninth century.

The Ptolemaic tradition.

Arabic texts on planetary theory and the structure of the universe, as indicated above, normally reflect the Ptolemaic system. But, because of the paucity of detailed studies, it is at present difficult to assess the extent to which any particular set of astronomical tables or *zīdj* has depended on Indian, Persian, or Greek material. It is clear, however, that even in the majority of Ptolemaic *zīdj*es one will find parameters, methods of computation, or other elements derived from the *Sindhind* or the *Shāh*. This is true of the *Zīdj al-mumtaḥan* of Yaḥyā b. Abī 'l-Manṣūr

(c. 214/829) and in the several *zīdj*es of Ḥabash (c. 235/850); Abū Maʿshar in his *Zīdj al-hazārāt* made a conscious effort to combine the three systems in order to substantiate his claim that they are all descended from a unique ante-Diluvian revelation.

The *Zīdj al-Ṣābiʾ* of al-Battānī (c. 287/900), however, is almost entirely Ptolemaic; in this it presumably reflects the strong Hellenistic atmosphere of the Syrian, and particularly the Ḥarrānian, astronomical and astrological schools. Al-Battānī's parameters were adopted by Kūshyār b. Labbān (c. 400/1010), though Kūshyār was generally a follower of Abū Maʿshar in his astrological works, and one suspects that this influence can also be traced in his *zīdj*es. The *Zīdj al-kabīr al-Ḥākimī* written by Ibn Yūnis (c. 380/990) in Cairo is extremely important for the historical information it contains. *Al-Ḳānūn al-Masʿūdī* of al-Bīrūnī (421/1030), whose works are also of immense importance for their historical information, often reflects the author's interest in Indian astronomy. The *Zīdj al-Sandjarī* was composed by al-Khāzinī (c. 514/1120) in Iran; an epitome of it was translated into Greek by Gregory Chioniades, who obtained the manuscript at Tabrīz, in c. 700/1300. Al-Khāzinī, despite his interest in Abū Maʿshar's Indian theory of cycles, continues to compute according to the Ptolemaic tradition. And the *Zīdj al-ʿAlāʾī* of al-Fahhād (c. 545/1150), not extent in its original form, was one of the texts translated into Greek by Chioniades, and its elements were used by al-Fārisī (c. 658/1260) in his *Zīdj al-mumtaḥan al-Muẓaffarī*.

The *Sindhind* tradition.

The foundation of this tradition lies in the works of al-Fazārī and Yaʿḳūb b. Ṭāriḳ, wherein already, as we have seen, some Sasanian and Greek elements had been mingled with the *brāhmapakṣa* and *Āryabhaṭīya* material. But the most influential representative of this tradition was the *Zīdj al-Sindhind* of al-Khuwārizmī [*q.v.*] (c. 215/830). Only fragments of the original text survive, but we do have a Latin translation of the revision made by al-Madjrīṭī in Cordova (c. 390/1000); the translator was Adelard of Bath (1126). We also have commentaries on al-Khuwārizmī's *zīdj* written by al-Masrūr (c. 261-875) and by Ibn al-Muthannā (4th/10th century; this commentary survives only in Latin and Hebrew translations made in Spain) as well as fragments of the commentary composed by al-Farghānī [*q.v.*] (c. 235/850). The details of the preservation of al-Khuwārizmī's work that have just been given are indicative of the strong Andalusian predilection for the *Sindhind*; this impression is strengthened by the fact that the *Naẓm al-ʿiḳd* of Ibn al-Adamī (c. 308/920), one of the principal Eastern representatives of the *Sindhind* tradition, is primarily known through a quotation in Ṣāʿid al-Andalusī. The two other Eastern *zīdj*es which followed the *Sindhind* after 900—the *zīdj* of al-Nayrīzī (c. 287/900) and that of the Banū Amādjur (c. 297/910)—are mainly known from citations in Ibn Yūnis and in al-Bīrūnī.

In Spain the tradition was continued by al-Madjrīṭī's pupil, Ibn al-Samḥ (416/1025), whose *zīdj* is available in fragmentary form; the *zīdj* of Ibn al-Ṣaffār is probably also lost, though a manuscript in Paris may contain it. But the principal *zīdj* of Muslim Spain was the "Toledan Tables" of al-Zarḳālla (c. 473/1080); this work is a mixture of materials from al-Khuwārizmī and al-Battānī. It had an enormous influence among Muslim (Ibn Kammād, Ibn al-Bannāʾ, etc.), Jewish (Abraham ben Ezra, Profatius, etc.), and Christian (the "Alfonsine Tables" and its successors) astronomers in Western Europe until the end of the 15th century.

The School of Marāgha.

Spain, as we have seen, was the home not only of the *Sindhind* tradition, but also of the Aristotelian assault on Ptolemy. Far more impressive astronomically was the effort generated at the observatory at Marāgha (founded by Naṣīr al-Dīn al-Ṭūsī in 657/1259) to modify Ptolemaic theory, and continued at its successors at Tabrīz and Damascus. At Marāgha itself, where Chinese astronomers assisted their Muslim colleagues, the problem of revising Ptolemaic astronomy was seen as being essentially that of replacing the equant of each planet so that all celestial motions might be uniformly circular. The Ṭūsī couple invented by Naṣīr al-Dīn and explained in his *Tadhkira* provided the basic approach for the solutions later proposed by his pupil, Ḳuṭb al-Dīn al-Shīrāzī, in 680/1281 and 683/1284, and by Ibn al-Shāṭir of Damascus in c. 750/1350, though each of them advocated different numbers, dimensions, and arrangements of the epicycles. It was only Ibn al-Shāṭir who finally reached a satisfactory solution for the two most difficult planets, Mercury and the Moon; but by the middle of the 8th/14th century, then, Muslim astronomy had worked out planetary models that depended solely on combinations of uniform circular motions, eliminating the equants from the models of the five "star-planets", and the "crank mechanism" and "opposite point" from that of the Moon.

This accomplishment of Ibn al-Shāṭir shares many features with the models proposed by Copernicus two centuries later; in particular, their models of the Moon and of Mercury are identical, they both employ the Ṭūsī couple, and they both eliminate the equants in essentially the same way. There can be little doubt, then, that Copernicus knew of Ibn al-Shāṭir's work; the details of the transmission, however, remain obscure. It is true that manuscripts of the Greek translations of various Arabic *zīdj*es made by Gregory Chioniades in c. 1300 upon his return to Constantinople after his studies at the observatory at Tabrīz were in Italy by the middle of the fifteenth century, and that they contain diagrams apparently illustrating the Ṭūsī couple, but they contain no details about Ḳuṭb al-Dīn's work and are, of course, too early to have been influenced by Ibn al-Shāṭir. Some other intermediary must have existed.

The later observatories.

The observatory at Marāgha and the *zīdj* which it produced—the *Zīdj-i Īlkhānī*—served as a model for later Muslim astronomical efforts, though the modifications of Ptolemaic theory that we have just described are not known to have been influential in Islam after the 8th/14th century. The most famous imitator was the observatory founded by Ulugh Beg at Samarḳand in 823/1420, where a number of astronomers headed by al-Kāshī and Ḳāḍīzāda prepared a *Zīdj-i Sulṭānī* (c. 844/1440); al-Kāshī also published a *zīdj* of his own, the *Zīdj-i Khāḳānī*. All three of these *zīdj*es are essentially Ptolemaic, though improvements are made in the parameters and in the structure of some of the tables, and material on the Chinese-Uyghur calendar is added to the other calendaric information common to all astronomical tables.

The last important Muslim observatory was built for Taḳī al-Dīn in Istanbul between 983/1575 and

985/1577. But the five observatories built in imitation of that at Samarḳand by Djayasimha, the Mahārādja of Amber from 1693 to 1743, at Djayapura, Udjdjayinī, Delhi, Mathurā, and Vārāṇasī deserve to be mentioned, as they represent an attempt, though an abortive one, to revise Indian astronomy so as to make it conform to the Muslim Ptolemaic tradition. A more fruitful influence of the later Muslim observatories on their neighbours was that exercised by Marāgha, Samarḳand, and Istanbul upon European astronomy; several of the instruments and some of the organizational features of these establishments appeared at Tycho Brahe's Uraniborg (1576) and Stjerneborg (1584) observatories. The development of the astronomical observatory, the achievement of the School of Marāgha, the advances in trigonometry and in the structure of tables, and the constant attempts to improve parameters stand out as the most impressive accomplishments of Islamic astronomy.

Bibliography: The vastness of the field of Muslim astronomy obviously precludes any extensive listing of the relevant literature; the following notice mentions only standard reference works and the latest books and articles reflecting advances in our knowledge of specific aspects of the subject. The standard reference work for the astronomers themselves and their works remains, despite its age, H. Suter's *Die Mathematiker und Astronomen der Araber und ihre Werke, Abhandlungen zur Geschichte der Mathematischen Wissenschaften*, x, Leipzig 1900 (reprinted Ann Arbor 1963); this can be supplemented by H. P. J. Renaud's article in *Isis*, xviii (1932), 166-83, by C. Brockelmann's *GAL*, Pearson, and by the relevant articles in the *Encyclopaedia of Islam* and in the forthcoming *Dictionary of Scientific Biography*. The fullest account of the *zīdj*es is E. S. Kennedy's *A survey of Islamic Astronomical Tables, Transactions of the American Philosophical Society*, NS xlvi/2, Philadelphia 1956. The best introduction to Islamic astronomy is C. A. Nallino's *ʿIlm al-falak*, Rome 1911-12; there is an Italian translation by M. Nallino in C. A. Nallino, *Raccolta di scritti editi e inediti*, v, Rome 1944, 88-329.

For the literature concerning the period of translations the reader may refer to the references given in D. Pingree, *The fragments of the works of al-Fazārī*, in *JNES*, xxviii (1969). The history of Islamic astronomy in Spain and its influence on Latin and Hebrew astronomy is dealt with in a series of articles by O. Neugebauer, J. M. Millás Vallicrosa, B. Goldstein, P. Kunitzsch, G. Toomer, and others; there are articles on the influence of Muslim astronomy on Byzantium by O. Neugebauer, D. Pingree, and P. Kunitzsch. Muslim observatories are investigated in A. Sayili's *The Observatory in Islam, Publications of the Turkish Historical Society*, series vii, no. 38, Ankara 1960. And a summary of the recent work on the School of Marāgha together with the relevant bibliography will be found in E. S. Kennedy's *Late medieval planetary theory*, in *Isis*, lvii (1966), 365-78. Each of the subjects mentioned in this paragraph is presently being intensively explored; any future reader of this article should expect to find that enormous advances have been made in our knowledge of them. (D. Pingree)

ʿILM AL-ḤISĀB, "the science of reckoning, arithmetic". Al-Fārābī [*q.v.*], in his *Iḥṣāʾ al-ʿulūm* (ed. Á. G. Palencia, Madrid 1953), divides mathematics (*ʿulūm al-taʿālīm*) into seven large branches headed by the science of number (*ʿilm al-ʿadad*). According to him there are in fact two sciences of number, one practical (*ʿamalī*) and the other theoretical (*naẓarī*). Echoing certain passages in Plato, he explains that the former investigates numbers in so far as they are numbers of numbered things, such as men, horses or *dīnār*s, whereas the latter —which is properly to be called a science—investigates numbers in abstraction from concrete objects. He adds that the theoretical science of number concerns itself both with properties inherent in individual numbers, such as being odd or even, and with properties which these numbers acquire when related to one another or combined with or separated from one another.

In general, however, we find in Arabic mathematical writings another distinction, which is also of Greek origin, between *ʿilm al-ʿadad* and *ʿilm al-ḥisāb* (the science of reckoning), corresponding to the distinction between ἡ ἀριθμετικὴ τέχνη and ἡ λογιστικὴ τέχνη. The subjects treated under the former heading are those of Books vii-ix of Euclid's *Elements* (first translated in the reign of Hārūn al-Rashīd by al-Ḥadjdjādj b. Yūsuf b. Maṭar) and the *Introduction to Arithmetic* of Nicomachus of Gerasa. Like their Greek predecessors, Arabic authors on the whole considered irrational magnitudes, the subject of Bk. x of the *Elements*, as belonging to geometry rather than arithmetic, though some of them—like ʿUmar al-Khayyāmī [*q.v.*]—took significant steps towards regarding irrationals as numbers (cf. A. Yuschkewitsch, *op. cit.* in Bibl., pp. 248 ff.). *ʿIlm al-ḥisāb*, on the other hand, is concerned mainly with the fundamental arithmetical operations and the processes of root extraction. But in accordance with the general conception of *ḥisāb* as being concerned with the determination of unknown numerical quantities from known ones, books on *ḥisāb* usually include sections on algebraic problems. Indeed a number of treatises purporting to be on *ḥisāb* are almost entirely devoted to algebra. Examples are the *Ṭarāʾif al-ḥisāb* of Abū Kāmil Shudjāʿ b. Aslam, c. 287/900 (ed. A. S. Saʿīdān, *Madjallat Maʿhad al-Makhṭūṭāt al-ʿArabiyya*, ix (1963), 291-320; German trans. by H. Suter, *Bibl. Math.*, iii/2, 1911, 100-120); *al-Kāfī* (German trans. by A. Hochheim, in three parts, Halle 1878-80), and *al-Badīʿ* (ed. A. Anbouba, Beirut 1964), both by Abū Bakr Muḥammad b. al-Ḥasan al-Karadjī, c. 390/1000 (= al-Karkhī, cf. Levi Della Vida, in *RSO*, xiv, 264 ff., and Anbouba in [*Madjallat*] *al-Dirāsāt al-adabiyya* Lebanese University, Beirut, nos. 1 and 2, 1959, 73-106); and *al-Bāhir fī ʿilm al-ḥisāb* of al-Samawʾal b. Yaḥyā al-Maghribī, d. ca 570/1175 (Anbouba in *al-Mashriḳ*, 1961, 61-108). It may be remarked that in all of these treatises, as distinguished from books dealing with Indian methods of reckoning, the numbers are as a rule written out in words. Owing to the expression *ʿilm ḥisāb al-nudjūm* ("science of the computation of the stars") the term *al-ḥāsib* (the "computer") could refer to an astronomer or an astrologer as well as to an arithmetician.

Nicomachus's *Introduction* was translated into Arabic by Thābit b. Ḳurra al-Ḥarrābī, d. 288/901 (*Kitāb al-Madkhal ilā ʿilm al-ʿadad*, ed. W. Kutsch S. J., Beirut 1959), and it soon enjoyed the popularity which it had secured in late antiquity. Through it, mathematicians in Islam became acquainted with a systematic exposition of Pythagorean arithmetical lore: relation of arithmetic to the other subjects

of the quadrivium (geometry, astronomy and music), classifications of numbers; perfect, over-perfect and deficient numbers; amicable (*mutaḥābba*) numbers; series, etc. The influence of this work can be seen in the writings of the Ikh̲wān al-Ṣafāʾ [*q.v.*], whose first *Risāla*, "On Numbers" (English trans. by B. Goldstein, in *Centaurus*, 1964, 129-60), is in large part a paraphrase of the *Introduction*, and in which the authority of Nicomachus and Pythagoras are repeatedly invoked. According to the Ikh̲wān, arithmetic, the first stage on the way to wisdom, is a study of the properties of existing things through a study of the individual numbers corresponding to those things: "existing things are in accordance with the nature of numbers". Even when a conventional classification of numbers is made, such as their classification into units, tens, hundreds and thousands, it is inspired by a universal pattern in nature —in this case, the four natures, the four elements, the four humours, etc. The prototype of the number one is The One; and just as all things proceed from the One transcending them, so one is the principle of all numbers but is not itself a number. Speculations of this kind are not to be found solely in scientifically weak writings; one of the great mathematicians of Islam, ʿUmar al-Kh̲ayyāmī [*q.v.*], believed that the study of mathematics—being the purest part of philosophy—was the first step on the ladder that leads to salvation and to knowledge of the true essence of Being (*Risāla fī s̲h̲arḥ mā as̲h̲kala min muṣādarāt Uḳlīdis*, ed. A. I. Sabra, Alexandria 1961, pp. 3 and 75). And we should remember that the translator of Nicomachus's *Introduction* was one of the ablest mathematicians of the 3rd/9th century. One is struck, however, by the paucity of writings on *ʿilm al-ʿadad* proper. A somewhat extended treatment of this subject is *Marāsim al-intisāb fī ʿilm al-ḥisāb*, written in Damascus in 774/1373 by the Spanish-Arab Yaʿīs̲h̲ b. Ibrāhīm b. Yūsuf al-Umawī; it contains a treatment of pyramidal numbers (Saidan, in *IC*, 1965, 210 and 212). Th̲ābit b. Ḳurra wrote a separate treatise on amicable numbers (French trans. by F. Woepcke, in *JA*, xx (1852), 420-29) and so did Kamāl al-Dīn al-Fārisī (see Brockelmann, S II, 295, no. 2). Arguing against the view that an infinite cannot be greater than another infinite, Th̲ābit cited the example of numbers, observing that the class of natural numbers and that of even numbers are both infinite while the latter is half the former. In fact an infinite collection of numbers, he said, can be any part of another infinite collection (British Museum MS. Add. Or. 7473, fol. 14ᵛ).

The first manual of Hindu reckoning, that of Muḥammad b. Mūsā al-Kh̲uwārizmī (c. 210/825), survives only in a number of Latin versions deriving from a Latin translation probably made in the 12th century A.D. One of these, represented by a unique 13th-century manuscript preserved at Cambridge, was first published by B. Boncompagni as *Trattati d'aritmetica i*: *Algoritmi de numero indorum*, Rome 1857, and re-edited by K. Vogel, *Alchwarizmi's Algorismus*, Aalen 1963. Another version is *Ioannis Hispalensis Liber algorismi* (or *alghoarismi*) *de pratica arismetrice*, published by Boncompagni as *Trattati d'aritmetica ii*, Rome 1857. The former book explains the decimal place-value system of numeration, though the nine Indian numerals are missing from the Cambridge manuscript, which uses only Roman numerals. Zero is represented here as a small circle (*circulus*), whose function is to indicate a vacant place (*differentia*, *mansio*: ?*martaba*, ?*manzila*); the *Liber algarismi* also calls zero *ciffre* or *siffre*, reflecting the Arabic *ṣifr*, "empty". In performing the fundamental arithmetical operations the numbers are placed one above the other and the process begins on the left. Erasure and shifting of numbers are used, thus clearly implying that the operations were performed on a dust-board. A particular feature of the book is the treatment of duplation and mediation as separate operations; this practice was preserved by Arabic arithmeticians as late as al-Kās̲h̲ī in the 9th/15th century (though not in al-Karad̲j̲ī, Ibn al-Bannāʾ, c. 619/1222, or al-Ḳalaṣādī, d. 882/1477 or 891/1486) and was also continued by many writers in Europe up to the 16th century.

Extant among the earlier introductions to Indian-type arithmetic is the *Uṣūl ḥisāb al-hind*, which Abu 'l-Ḥasan Kūs̲h̲yār b. Labbān al-D̲j̲īlī composed in about 390/1000 (*Principles of Hindu Reckoning*, facsimile of the Arabic text with English translation, etc. by Martin Levey and Marvin Petruck, Madison and Milwaukee 1965). It is in two parts. The first part introduces the 'nine letters' and the principle of decimal place value. A small circle, '*ṣifr*', indicates the absence of number from the place position (*martaba*) which it occupies. Kūs̲h̲yār then deals with addition (*ziyāda*), subtraction (*nuḳṣān*), multiplication (*ḍarb*) and division (*ḳisma*). Duplation (*taḍʿīf*) and mediation (*tanṣīf*) are described as 'other kinds' of addition and subtraction respectively. There follows a treatment of the square root (*d̲j̲ad̲h̲r*) and this part ends with a short chapter on *mawāzīn*, in which the check by casting out nines is applied to multiplication, division and the extraction of square roots. Fractions are here expressed exclusively in the sexagesimal scale. A half, for example, is thirty parts of one, and accordingly the final result of halving 5625 appears as $\frac{2812}{30}$. Similarly the remainder in a division is multiplied by powers of 60, then divided by the divisor. The second part is entirely devoted to the 'compounded' sexagesimal system of calculation (including the calculation of square root) with the help of multiplication tables of numbers up to 60 (missing in the extant text). In these tables numbers were expressed in the traditional *abd̲j̲ad* notation, but the calculations themselves employ a pure place-value system of numeration using the nine figures and zero. A final chapter illustrates the process of extracting the cube root (*kaʿb*) in the decimal system. Throughout the book the calculations are performed on a dust board (*tak̲h̲t*) and involve rubbing out and displacement of numbers, the final result replacing one of the given numbers. For example, to multiply 325 by 243 the following figures successively replace one another on the board: $\frac{325}{243}$, $\frac{6\ 325}{243}$, $\frac{72325}{243}$, $\frac{72925}{243}$, $\frac{77765}{243}$, $\frac{78975}{243}$.

But already before Kūs̲h̲yār's time highly significant innovations were being introduced, as is witnessed by *Kitāb al-Fuṣūl fī 'l-ḥisāb al-hindī*, which Abu 'l-Ḥasan Aḥmad b. Ibrāhīm al-Uḳlīdisī composed in Damascus in 341/952-3. Though not yet published, this important book has recently been studied by A. S. Saidan in the unique Istanbul MS Yeni Cami 802 (*Isis*, lvii (1966), 475-90). As well as applying Indian schemes of calculation to the old finger arithmetic (see below) and to sexagesimal

fractions, al-Uḳlīdisī set out to alter the dust-board methods to suit ink and paper. Not only was the awkwardness of these methods apparent, but the association of the *takht* with astrologers earning their living by casting horoscopes and the unbecoming practice of rubbing off the sand with the hand made it undesirable. Thus it is interesting to note that when, in the same century as al-Uḳlīdisī, Abu 'l-Wafāʾ al-Būzdjānī wrote his handbook of arithmetic for the use of the government bureaucracy (*Mā yaḥtādj ilayh al-kuttāb wa 'l-ʿummāl min sināʿat al-ḥisāb*; cf. M. Medovoi in *Istoriko-matematičeskiye Issledovaniya*, xiii (1960), 253-324), he was careful to free the Indian-type schemes which he sometimes employed from the dust-board and erasure. Al-Uḳlīdisī claimed to be the first to offer a satisfactory treatment of cube root; but the most surprising feature of his book is the explanation and application of decimal fractions, an innovation which until very recently was attributed to al-Kāshī, five centuries later. The idea reappears in some form in the *Takmila fī ʿilm al-ḥisāb* of Abū Manṣūr ʿAbd al-Ḳāhir al-Baghdādī (d. 428/1037), who expressed our 17.28 by the ar-
17
rangement 02 (see Saidan in *Isis, loc. cit.*, 487-8
08
and in *IC*, xxxix (1965), 210, 220). But the invention appears to have been generally lost until, five centuries after al-Uḳlīdisī, al-Kāshī re-introduced decimal fractions (*al-kusūr al-aʿshāriyya*) in his *Miftāḥ al-ḥisāb* as a new discovery to which he was led by analogy with sexagesimals (facsimile of the Arabic text with Russian translation and commentary by B. Rozenfeld, V. Segal and A. Yushkevich, Moscow 1956). While al-Kāshī realised the importance of decimal fractions more fully than al-Uḳlīdisī, the latter had used a decimal sign—a stroke above the numeral in the units place—which is superior to al-Kāshī's ways of indicating the decimal part of the number, for example by writing it in a different colour or in a column or columns other than that of the integral part.

A distinguishing feature of the books dealing with Hindu reckoning is the use of the 'Arabic numerals', which were traditionally asserted by mediaeval Arabic scholars to be of Indian origin. While this ascription is now generally accepted, questions relating to the ultimate source of the numerals and to the manner of their diffusion and development in the Islamic world and in Europe remains a subject of debate, in spite of the extensive researches of Woepcke, Smith and Karpinski, Carra de Vaux, Gandz, and many others. In the Islamic world the numerals existed and have continued to exist mainly in two forms, one in the East and the other in the West. Usually the Eastern numerals were called "Indian", whereas the others, the immediate parents of the modern European numerals, were called *ghubār* (dust) numerals. But sometimes the names were reversed (cf. F. Woepcke and A. Marre in *Atti dell'Accademia Pontificia de' Nuovi Lincei*, tomo xix, anno xix, 1866), or both forms were called Indian or both called *ghubār*. Ibn al-Hāʾim (d. 815/1412) in his *Murshidat al-ṭālib ilā asna 'l-maṭālib* reproduces the Eastern and Western forms and calls them both "Indian". A marginal note in one manuscript rejects this appellation as applied to the latter form, which it claims to be of '*Rūmī*' origin, and calls them both *ghubār* (MS. Princeton University Library, Yah. 3940, dated 981/1573-4, fol. 1^v). This claim should be considered in connexion with the thesis put forward by Woepcke and supported by Gandz that the *ghubār* numerals had been spread by the Neoplatonists and that the Arabs learned them directly from the Romans. Concerning the Western-style numerals, Yaḥyā b. Taḳī al-Dīn b. Ismāʿīl al-Ḥalabī (c. 1019/1610) says in his *Maslak al-ṭullāb fī sharḥ Nuzhat al-ḥussāb*: "These are the *ghubāriyya* (numerals), and they are also called Indian, but their use has become prevalent among the people of the Maghrib and among those who follow them" (MS. Princeton University Library, Yah. 3407, dated 1037/1627-8, fol. 82^r).

Both forms of the numerals were known to the Arabs by A.D. 733, if not earlier. It may be noted, however, that up till now no one has found in Arabic treatises on arithmetic any reference to Indian authors or titles—unlike the situation in Arabic astronomical writings. Moreover, these treatises show no trace of the Hindu division of arithmetic into some twenty operations but rather follow the familiar Greek division; and in their designations of powers higher than the square and the cube they always considered the sums, as in Diophantus, not the products, as was the Hindu practice. They expressed the sixth power, for example, as *kaʿb kaʿb* (κυβόκυβος), not as the square of the cube or the cube of the square (cf. H. T. Colebrooke, *op. cit.* in Bibl., p. xii). On the other hand, the phrase *ḥisāb al-takht wa'l-turāb* ("board and dust calculation") is clearly the equivalent of the Sanskrit *pāṭīgaṇita* and *dhūlī-karma* (Datta and Singh, *op. cit.* in Bibl., i, 123-4). And there is a parallel in Sanskrit usage for the fact that *al-djamʿ wa 'l-tafrīḳ* (or, as in Ibn Khaldūn, *al-ḍamm wa 'l-tafrīḳ*), two terms which in the extant treatises always denote addition and subtraction respectively, could also designate the whole of arithmetic (*ibid.*, 130; and cf. J. Ruska, in *Sb. Heid. Ak. Wiss.*, Phil.-hist. Kl., 1917, 14-21). Thus the Ikhwān al-Ṣafāʾ defined *ḥisāb* as *djamʿ al-ʿadad wa-tafrīḳuhu* (the combining and separating of numbers); and al-Khuwārizmī is reported to have written a book on *al-djamʿ wa'l-tafrīḳ*, which could not have been restricted to the elementary operations of addition and substraction.

Before the spread of Hindu methods of reckoning there prevailed in the Islamic world a kind of arithmetic which al-Uḳlīdisī called *ḥisāb al-Rūm wa'l-ʿArab*. Books dealing with it (such as the treatise of Abu 'l-Wafāʾ mentioned earlier) gave rules for effecting the arithmetical operations including the approximate determination of square roots. These operations were usually performed mentally, and the partial results obtained in the process of reaching the final solution of a problem were 'retained' by holding the fingers in certain positions. Because of these features this arithmetic came to be known as *ḥisāb al-yad* (hand reckoning), *ḥisāb al-ʿuḳūd* (finger reckoning), *al-ḥisāb al-hawāʾī* (mental, or literally, air reckoning). To deal with fractions, finger reckoning applied the sexagesimal scale or converted the fractions into parts of the local units of currency or measurement. Another system used by it appears to have been suggested by certain characteristics of the Arabic language, in which only the fractions 1/3, 1/4, . . ., 1/10 are expressible by words derived from names of their denominators ('third' from 'three', etc.). ('Half' is not derived from 'two' and is therefore called *mawḍūʿ*, *i.e.*, formed by convention.) Some other fractions can be reduced to fractions of the former group: 1/12, for example, is half one sixth. Others, such as 1/11 or 1/13, cannot

be so expressed and for this reason they and their denominators are called *aṣamm*. In this sense of the word the Ikhwān al-Ṣafāʾ speak of 11 as 'the first *aṣamm* number'. To express 1/11 one has to say: "one part out of eleven". In other contexts *aṣamm* was used to render Euclid's ἄρητος as applied to a number, such as $\sqrt{2}$, that cannot be expressed as the ratio of two natural numbers.

Although treatises on finger computation continued to be written even after the advantages of Hindu reckoning were clearly recognized, the general aim of Arabic arithmeticians, and perhaps their chief achievement, was to fuse together the various methods available to them into one system of arithmetic based on the consistent application of the decimal place-value idea and using Indian numerals. One of these methods was the ancient sexagesimal scale which was strongly impressed upon Arabic mathematical writing through the translation of Greek astronomical works. But, again, sexagesimal methods of computation, together with the *abdjad* notation associated with them, remained always in use among Islamic astronomers. In recognition of this fact almost every important treatise of Arabic arithmetic devoted a chapter to the treatment of the sexagesimal system, sometimes called *ḥisāb al-munadjdjimīn* ("arithmetic of the astronomers", or "astrologers"), *ḥisāb al-zīdj* ("arithmetic of astronomical tables"), or *ḥisāb al-daradj wa 'l-daḳāʾiḳ* ("arithmetic of degrees and minutes"). A late but comprehensive treatise entirely devoted to this system is that by Sibṭ al-Māridīnī (d. after 891/1486): *Raḳāʾiḳ al-ḥaḳāʾiḳ fī maʿrifat al-daradj waʾl-daḳāʾiḳ*. The author says that the only satisfactory work on sexagesimal computation which he had seen was one by his teacher Shihāb al-Dīn Aḥmad b. al-Madjdī (Princeton University Library, MS Yah. 3325, fol. 1v).

In Arabic books on arithmetic, checks (*mawāzīn*) take the place of demonstrations proper. This contrasts with Arabic treatises on algebra, which, following a Greek tradition, often supplied geometrical proofs. The check by nine appears in the earliest extant books, in al-Uḳlīdisī and in Kūshyār, and it continued to be used throughout. Al-Ḥaṣṣār, probably in the 6th/12th century, checked by seven (H. Suter in *Bibl. Math.*, iii/2, 1901, 12-40); Ibn al-Bannāʾ in his *Talkhīṣ* (French translation by A. Marre, *Atti dell'Accademia Pontificia de' Nuovi Lincei*, tomo xvii, anno xvii, 1863-64, Rome 1864, 289-319) used eight as well as nine, and al-Umawī (*IC*, *loc. cit.*, p. 219) used also eleven. Al-Ḳalaṣādī applied the method of casting out sevens and, in connexion with subtraction, says that other numbers could be used. The limitation of these methods was recognized. Al-Kāshī, who used only nine, states that they show a certain result to be incorrect, but not that it is correct. A similar statement occurs in the *Liber algorismi*.

ʿILM AL-ḤURŪF [see ḤURŪF].

ʿILM AL-KALĀM, one of the "religious sciences" of Islam. The term is usually translated, as an approximate rendering, "theology".

I.—Definition. It is difficult to establish precisely when *ʿilm al-kalām* came to mean an autonomous religious science (or branch of knowledge). In any case, whereas the term *fiḳh* meant originally —especially in the Ḥanafī school (cf. *fiḳh akbar*) —speculative meditation, hence distinguished from *ʿilm* in the sense of traditional knowledge, the term *kalām*, literally "word", quickly acquired the senses of "conversation, discussion, controversy" (cf. A. J. Wensinck, *The Muslim creed*, 1932, 79, quoting two *ḥadīth*s of Muslim). In his *Iḥṣāʾ al-ʿulūm*, al-Fārābī regards *ʿilm al-kalām* as "a science which enables a man to procure the victory of the dogmas and actions laid down by the Legislator of the religion, and to refute all opinions contradicting them". The doctors of *kalām* (*mutakallimūn*) themselves were to take a very similar view: this is one of many well-known definitions: "*kalām* is the science which is concerned with firmly establishing religious beliefs by adducing proofs and with banishing doubts" (from the *Mawāḳif* of al-Īdjī, 8th/14th cent.). Similar

definitions are to be found in Ibn Khaldūn, and again in Muḥammad ʿAbduh: they summarize a long elaboration, but add nothing new.

ʿIlm al-kalām is the discipline which brings to the service of religious beliefs (*ʿaḳāʾid*) discursive arguments; which thus provides a place for reflexion and meditation, and hence for reason, in the elucidation and defence of the content of the faith. It takes its stand firstly against "doubters and deniers", and its function as defensive "apologia" cannot be over-stressed. A fairly common synonymous term is *ʿilm al-tawḥīd*, the "science of the Unity (of God)", understood as concerned not merely with the divine unity but with all the bases of the Muslim faith, especially prophecy (*e.g.*, al-Djurdjānī, *Sharḥ al-Mawāḳif*, ed. Cairo 1325, i, 26).

Another interpretation sometimes suggested explains *ʿilm al-kalām* as "science of the Word of God". The attribute of the Word and the nature of the Ḳurʾān were indeed among the first themes treated, and discussions on this subject continued throughout the centuries. But this was by no means the first question undertaken (see below, § II) nor that later treated at most length. It seems much more likely that *kalām* referred at first to discursive arguments, and the *mutakallimūn* ("*loquentes*") were "reasoners". This was the case as early as the time of Maʿbad al-Djuhanī (d. 80/699-700). *Kalām* became a regular discipline when these arguments and discussions dealt with the content of the faith. It is this character of discursive and reasoned apologia which was to attract the attacks both of the traditionists and of the *falāsifa* (§ IV, below).

II.—The great schools.

A. *First tendencies.*—It seems that it is from the battle of Ṣiffīn and the schisms to which it gave rise that can be dated not of course the first meditations on the content of the faith but their grouping into tendencies and schools. The appearances of the three main politico-religious traditions, Khāridjī, Shīʿī and Sunnī, set before Muslim thinkers the problem of the validity of the *imāma* [*q.v.*] and the "status of believer" which the *imām* must possess; thence arose the question of faith and the conditions for salvation and the question of man's responsibility or lack of responsibility; then, as parallel considerations, the nature of the Ḳurʾān (created or not created) and hence the stress laid upon the divine attribute of the Word; then finally, the more general problem of the divine attributes, their existence and their connexion with the divine essence, and its Unity. Many other questions were added in course of time; but already at this early period—the age of the Umayyads and the early ʿAbbāsids—the essential themes which were to constitute *ʿilm al-kalām* had arisen. Whatever may have been the effect of external influences—discussions with Mazdean *zanādiḳa* on good and evil in human actions or with the Christian theologians of Damascus on the Word of God, and the discovery of Greek science and philosophy—*kalām* tended at first to take shape over specifically Muslim problems. The external influences probably had some effect as a result of the controversies, emphasizing some aspects of the subjects dealt with, giving direction to the choice of arguments and (still more, perhaps) the method of argumentation. The fact remains, however, that *ʿilm al-kalām* is certainly not an Arab adaptation of Mazdean or Christian theology but arose within the Muslim community, where it preserved its own originality.

It would be risky and tedious to attempt to establish the dates of the very first attitudes adopted. So far, these are hardly known except through later works of heresiography (notably of al-Ashʿarī, al Baghdādī, al-Shahrastānī, Ibn Ḥazm) and refutations. Again, it is not always the same thinkers who are linked together under this or that comprehensive label (*e.g.*, Ḳadariyya); and mere tendencies should not be transformed into "schools" in the strict sense. This or that *mutakallim* may be presented as showing diverse—even opposing—tendencies according to the problem he is dealing with. There follow here, as a general indication, a few points of reference.

The Ḳadariyya were those most opposed to the Umayyad régime, most critical of the ways of the court at Damascus. The name was ordinarily applied to those who recognized that man had a power (*ḳudra*) over his acts so extensive that determination (*ḳadar*) belonged to man alone, and who saw in "works" thus freely performed an integral part of the faith. Hence the man who deliberately committed a great sin became *kāfir*, infidel. This last tenet, which does not seem to have been supported by all, was to remain one of the characteristics of Khāridjī thought.—Ghaylān and Maʿbad al-Djuhanī are the members of the Ḳadariyya most frequently quoted. To them may be added, but with reservations, Wāṣil b. ʿAṭāʾ and ʿAmr b. ʿUbayd (2nd/8th century), who are regarded as the founders of the Muʿtazilī school and are, with them, sometimes called "political muʿtazilīs". This tendency re-appears in later Khāridjī or Shīʿī *kalām*. The term Ḳadariyya was later readily applied to the Muʿtazilīs proper, who disclaimed it. Some of them, interpreting differently the etymology of the term, used it of those who upheld the absoluteness of the divine Decree (*ḳadar*); this interpretation is found later in the works of their opponent Ibn Taymiyya.

In this second sense, Ḳadariyya becomes practically synonymous with what had been its opposite, Djabriyya (or Mudjbira [*q.v.*]), the upholders of *djabr*, the divine "compulsion", which creates man's acts, good or bad, so that nothing is attributed to the man who performs them. The Muʿtazilīs regarded as *djabriyya* those (including Ashʿarīs) who rejected their doctrine of *ḳadar*. Ashʿarī heresiographers accorded the term *djabriyya*—perhaps somewhat hastily—to the disciples of Djahm.

It was on the question of faith, sin and salvation that the Murdjiʾa [*q.v.*] disagreed with the Khāridjīs. A great sin (*kabīra*) does not involve loss of faith. On the basis of Ḳurʾān, IX, 106, the sinner's future fate is left in suspense (*irdjāʾ*), awaiting God's decision. It is Ghaylān and Ghassān (who seem to have had Ḥanafī connexions) who are usually (*e.g.*, by al-Shahrastānī) named as belonging to the Murdjiʾa.

Later heresiographers constricted these diverse tendencies into condensed formulas, which probably over-simplified and distorted them. But in these very first efforts to support politico-religious attitudes by means of rational argument the main lines of later discussions are already drawn. With greater or less success, the Ḳadariyya anticipate some of the main theses of the Muʿtazila; the Ashʿarīs were to seek a "happy mean" to reconcile the "compulsion" of the Djabriyya and human responsibility; the Murdjiʾa prefigure, to some degree, in their treatment of the problem of retribution in the next world, the explanations of the Māturīdī-Ḥanafīs and many Ashʿarīs. Full discussion of this question would re-

quire a detailed study (which would however be risky for lack of documentation) of G̲h̲aylān, who is sometimes classed with the Ḳadariyya, as having asserted human liberty of choice, and sometimes with the Murd̲j̲iʾa, thanks to his theory of the future lot of the sinful believer.

We are dealing therefore with tendencies rather than with established "schools of theology", and with overlapping views which later were to diverge. Thus it is with the adherents of the sect of the D̲j̲ahmiyya [*q.v.*], who regarded as their founder D̲j̲ahm b. Ṣafwān (executed in 128/746) but whose tenets are known only from the refutations of their opponents. To summarize: on the problem of *ḳadar* they would ally themselves with the D̲j̲abriyya, and on that of faith with the Murd̲j̲iʾa. Beyond this, however, they refused to recognize any distinct existence of the divine attributes, stripping them away (*taʿṭīl*) from the divine essence in order the better to protect its perfect and absolute unity. Finally, they supported the thesis of the created Ḳurʾān, and gave an allegorical interpretation to the anthropomorphic features in its text. Thus there arose a certain confusion between them and the Muʿtazilīs (*e.g.*, on the subject of Ḍirār b. ʿAmr), although the latter took position against them both for their excessive *taʿṭīl* and for their rejection of human freedom of action.

B. *The Muʿtazilī schools* (for the origin of the name, details on the historical development of the school and its doctrines, see MUʿTAZILA). The first Muʿtazilīs were contemporaries of the various tendencies and groupings surveyed above. It is sometimes difficult and perhaps pointless to distinguish them from the Ḳadariyya.

But after 132/750, when ʿAbbāsid authority was asserting itself at Bag̲h̲dād, discussions on the validity of the *imāma* lost their relevance, to be replaced by the defence of religious dogmas in general against attacks of *zanādiḳa* of all types. Doctrinal positions became so defined and systematized that one may speak of a regular school (or rather schools), whose vocabulary and methods of argument were to be influenced as a result of the activity of trans lation from works of Greek science and philosophy

After the "founders", Wāṣil b. ʿAṭāʾ and ʿAmr b. ʿUbayd, and the "forerunner", Ḍirār b. ʿAmr, we find two Muʿtazilī groups taking shape, at Baṣra and Bag̲h̲dād respectively, between the end of the 2nd/8th and the beginning of the 4th/10th century. Each embraced varying tendencies, but can justly be called a "school" (*mad̲h̲hab*) (see W. Montgomery Watt, *Free will and predestination in early Islam*, Edinburgh 1948, 65, for a table of the chief representatives of these schools and the links of their affiliation; list in L. Gardet, *Les grands problèmes de la théologie musulmane*: *Dieu et la destinée de l'homme*, Paris 1967, 26).

One may, with Montgomery Watt, regard Abu 'l-Hud̲h̲ayl al-ʿAllāf (d. *ca* 227/841) as the founder of the Baṣra school and, in a sense, of doctrinal Muʿtazilism itself. The great names in this school are Muʿammar, al-Naẓẓām (both of whom did not refrain from criticizing al-ʿAllāf), the great writer al-D̲j̲āḥiẓ, al-D̲j̲ubbāʾī and his son Abū Hās̲h̲im (d. 321/933). The doctors of Baṣra, in grappling with the doctrinal problems that arose, advanced original solutions in the field of natural philosophy or in noetics: the theory of atoms (*d̲j̲uzʾ*), of Abu 'l-Hud̲h̲ayl, the semi-conceptualism of the "modes" (*aḥwāl*) of Abū Hās̲h̲im.

The school of Bag̲h̲dād was perhaps less illustrious than that of Baṣra. It derived from Bis̲h̲r b. al-Muʿtamir (d. between 210-26/825-40), who was for a time imprisoned by Hārūn al-Ras̲h̲īd, was criticized by Abu 'l-Hud̲h̲ayl, and was to influence Muʿammar. Al-Murdār, T̲h̲umāma, al-K̲h̲ayyāṭ and al-Kaʿbī (d. 319/931) brought fame to this group.

As the oft-quoted remark of Aḥmad Amīn (*Ḍuḥā al-Islām*, Cairo, iii, 204) puts it, the Muʿtazilīs were "firstly men of religion and secondarily philosophers". It is not (*pace* D. B. Macdonald in *EI*[1], s.v. *Kalām*) the atomic theory (nor that of the "modes") which characterizes the *mutakallimūn*, but their primary concern to engage in disputation and argument to defend the faith against the *zanādiḳa* of the period, the "free-thinkers" inspired by Mazdeism or Manicheism, and later by pure Greek rationalism. Although nuances of doctrine, sometimes important, divided them, they were inspired by one and the same spirit: respect for reason (*ʿaḳl*) in the defence of religious tenets (*ʿaḳl* becoming even the criterion (*mīzān*) of the Law), the concern to purge the notion of God of all "multiplicity" and anthropomorphism, the desire to proclaim and justify the absolute divine perfection. The Muʿtazilīs themselves defined themselves as "the people of Justice and Unity".

(We may note the influence of Muʿtazilism on Jewish thought elaborated in the Arabic milieu; it too possessed a *kalām*, which opposed the Muslim doctors when necessary but which largely borrowed from them its problematics, its method and its systems of argument. Saʿadyāh Gaon (Saʿīd al-Fayyūmī) was the most famous Jewish *mutakallim*).

The five principal bases (*uṣūl*) or theses upon which Muʿtazilī problematic was elaborated are known: (1) the divine Unity (*al-tawḥīd*): the divine attributes are meaningful only when taken in a strict *via remotionis* (*tanzīh*), which their opponents readily identified with the *taʿṭīl* of the D̲j̲ahmiyya. God the Creator, an absolutely spiritual being, is inaccessible and can be seen neither in this world nor in the next. (2) Justice (*al-ʿadl*): God acts with a purpose. Things, by their nature, contain both good and evil. God can will only the good, and is obliged to accomplish that which is better (*al-aṣlaḥ*). Thus He neither wills nor commands that which is evil. Man, "creator of his own acts" by a contingent power (*ḳudra*) which God has created in him, is responsible for what he does, and God is obliged to reward or punish him accordingly. (3) "The promise and the warning" (*al-waʿd wa 'l-waʿīd*) or "the names and the decrees" (*al-asmāʾ wa 'l-aḥkām*): to possess faith is to perform the acts prescribed by the Ḳurʾān. Whoever commits a "great sin" and does not repent is destined for hell. The thesis elaborates the "decrees" for the believer and the unbeliever. It deals also with "traditions" (*ak̲h̲bār*): contrary to the normal doctrine, it does not insist that all the "transmitters" should be believers; and *id̲j̲māʿ* [*q.v.*] is not infallible. (4) "The intermediate state between faith and lack of faith (*al-manzila bayn al-manzilatayn*)—the position of the "believer who sins" (*fāsiḳ* [*q.v.*]), a characteristic thesis of the school. The sinner is neither a true believer (*muʾmin*), nor a true infidel (*kāfir*). He has failed to perform the "witness of the limbs", but his faith in God keeps him within the Community. It is here that are discussed the conditions for *imāma* and the respective merits of the first four Caliphs. (5) "The enjoining of what is good and the forbidding of what

is evil" (*al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*): this thesis at first was of major prominence, but later lost relevance. "The enjoining of what is good" is an obligation upon every Muslim (*contra*: al-Aṣamm, of Baṣra). As against the more prudent view prevailing later, the Muʿtazilīs advocated direct intervention, if necessary with the sword. One may and should depose guilty leaders, one may and should compel opponents, on pain of death, to profess the true doctrine (cf. al-Ashʿarī, *Maḳālāt*, ed. Cairo, ii, 466). This was the attitude of the Muʿtazilīs, in their days of triumph under al-Maʾmūn, when they denounced to the courts the supporters of the doctrine of the uncreated Ḳurʾān.

The fact remains that the writings of the great Muʿtazilīs, apart from the polemical *Intiṣār* (a defence of Muʿtazilism by al-Khayyāṭ, against Ibn al-Rāwandī), are available to us only at second hand. After being for a time the official doctrine, Muʿtazilism was in its turn condemned and most of its productions were destroyed. It is only recently (in about 1958), that there have come to light, in the Yemen, the writings of a Muʿtazilī (unfortunately, late), the *ḳāḍī* ʿAbd al-Djabbār (d. 415/1025): first *al-Mughnī fī abwāb al-tawḥīd wa 'l-ʿadl*, a true "summa", now (1969) being edited in Cairo, and second the *Kitāb al-Madjmūʿ fi 'l-muḥīt bi 'l-taklīf* (ed., not without mistakes, by J. J. Houben, Beyrouth 1962). To these may be added the work of synthesis *Sharḥ al-uṣūl al-khamsa* (ed. Cairo 1384/1965 by ʿAbd al-Karīm ʿUthmān), probably compiled by a Zaydī disciple, the *imām* al-Mandakim. We may mention also, in the line of ʿAbd al-Djabbār's teaching, the *Muʿtamad fī uṣūl al-fiḳh*, by his disciple the jurist Abu 'l-Ḥusayn Ibn al-Ṭayyib al-Baṣrī (ed. Damascus by Ḥamīdullāh).

ʿAbd al-Djabbār makes frequent reference to the "early masters" of the school ("our *shaykhs*"), more readily to the school of Baṣra, and especially to al-Djubbāʾī and Abū Hāshim. Thus we now possess quotations from the early doctors and resumés of their thought presented from the Muʿtazilī viewpoint: this reveals, incidentally, how objective are the *Maḳālāt* of al-Ashʿarī (and tends to prove that the first part at least of this work was composed during the years that the author adhered to Muʿtazilism). Again, the late date when ʿAbd al-Djabbār was teaching induced him to conduct polemic against the Ashʿarīs and set out the replies of the Muʿtazilīs to the attacks mounted against them. The discovery of these works in the Yemen is another proof that under the challenge of the 5th/11th century reaction the influence of the school continued to be felt in non-Sunnī milieus.

Before passing on from the climate of thought of the first great schools of *ʿilm al-kalām*, we may mention the group whom al-Ashʿarī calls *Ahl al-ithbāt* or *Muthbita* (cf. W. Montgomery Watt, *op. cit.*, 104 ff.). It is by no means easy to define it precisely. It comprised a certain number of thinkers, Ḍirār, al-Nadjdjār, Muḥammad Burghūth, whom later heresiographers readily classed as Muʿtazilīs; but they were opposed by various supporters of the school of Baṣra (thus al-Nadjdjār was opposed by Abu 'l-Hudhayl and al-Naẓẓām), and al-Ashʿarī saw in them his forerunners. They are said to have taught, *inter alia*, that God is the creator of human actions, and to have foreshadowed the theory of *kasb* or *iktisāb*, which defined and limited man's possession of the acts thus created. Reference to the *Ahl al-ithbāt* allowed al-Ashʿarī to present himself as being in no sort an innovator in the field of *ʿilm al-kalām*.

C. *The Ashʿarī reaction.*—The "resurgence of Sunnism" under al-Mutawakkil and throughout the 5th/11th century was accompanied by an indictment of Muʿtazilism and concurrently, at least by Ḥanbalī and Ẓāhirī traditionists, of *kalām* as such: what was questioned was the basic principle of reasoned and discursive argument starting from the tenets of the faith. *ʿIlm al-kalām* however not only survived but renewed itself, thanks to the new direction given to it by Abu 'l-Ḥasan al-Ashʿarī (260-324/873-935), a former Muʿtazilī. He is rightly regarded as the founder of the *Ashʿariyya* [*q.v.*], the most accepted and official school of *kalām* from the 4th/10th century to the 19th century. A certain number of his works (notably *Lumaʿ*, *Ibāna*) have survived, and his *Maḳālāt al-Islāmiyyīn* remain today an unrivalled source for our knowledge of the earlier tendencies and schools.

Throughout the centuries, several very famous names brought renown to Ashʿarī *kalām*. It is certain that manifold tendencies appeared in this school, and that varying—even divergent—attitudes were adopted. Thus al-Bāḳillānī summoned to the service of Ashʿarī tenets the atomism first expounded by Abu 'l-Hudhayl; however, al-Djuwaynī did not follow him at all on this point, but took up again the theory of "modes" of Abū Hāshim (and Bāḳillānī), which was abandoned by al-Ghazālī. But the basic viewpoints from which the major tenets of the faith are thought out remain the same; in spite of doctrinal differences—due largely to historical accidents and the diversity of the opponents it was necessary to refute—it is legitimate to speak of an Ashʿarī "school" (singular), perhaps more coherent than the Muʿtazilī schools had been.

Is it necessary, as has been suggested, to admit a radical distinction, even a split, between the thinking of the school's founder and that of the school named after him? It is true that in the *Ibāna*, al-Ashʿarī precedes his "credo" by a declaration of obedience to the teaching of Ibn Ḥanbal, and that although the declaration of faith which became traditional in the school could find justification in the *Lumaʿ* yet it is notably different from those set out in the *Ibāna* and the *Maḳālāt*. Nevertheless, the obedience to Ibn Ḥanbal declared by al-Ashʿarī did not deceive the Ḥanbalīs, who violently attacked the very principle of the defence of the faith by rational argument; and again, many propositions of the *Lumaʿ* had to await elucidation by later disciples, who were influenced in their turn by new historical circumstances. Thus there are not two "Ashʿarisms", one of the founder and one of his followers, but, fundamentally, a single common attitude which was to be progressively developed and variously coloured by successive apologetic discussions.

This common attitude is the unblurred affirmation of God as the inscrutable Almighty, Who does not act "with a purpose in view" and Who "is not to be questioned". In the strictest sense, God is "the sole Being and the sole Agent". He does not command an act *because* that act is just and good; it is His command (*amr*) which makes it just and good. God is the creator of human acts, of which man is merely the receiving subject (*maḥall*). But God "attributes" to a man his acts (theory of *kasb* or *iktisāb*), and hence are justified both human responsibility and the Judgement promised in the Ḳurʾān. Every statement of the Ḳurʾān corresponds to reality; the "ambiguous"

(*mutas̲h̲ābih*) verses are absolutely true as regards their affirmation of existence, but the anthropomorphisms which they present must be accepted *bilā kayf*, "without asking how". With a return to Ḥanbalī attitudes and against the Muʿtazilīs it is asserted that the Ḳurʾān is uncreated (*g̲h̲ayr mak̲h̲lūḳ*) and that the divine attributes are real. The attribute of the Word is not that it is "contingent": it subsists in God. But the school later taught the existence of the interior (*d̲h̲ātī*) divine Word, which is uncreated, and tended to admit that the "signs" which express it are created: such a distinction was to incur the vehement criticism of the Ḥanbali doctors.

A common attitude, we have said, but one which was continuously to seek to justify itself dialectically before its various opponents: first the Muʿtazilīs, al-As̲h̲ʿarī's own favourite targets for controversy, and then the "literalists", such as the Karrāmiyya who were opposed by Ibn Furāk; later still the *falāsifa*, and many others. Often enough the As̲h̲ʿarīs borrowed from their opponents this or that way of posing the problem and even the methods of argument, so that it is possible to establish the following distinct chronological phases: (1) the works of the founder, al-As̲h̲ʿarī; (2) the first disciples: al-Bāḳillānī, who adopted the theory of atoms and the theory of modes, which later were sometimes accepted and sometimes passed over in silence or rejected; al-Bag̲h̲dādī; Ibn Furāk, the opponent of the Karrāmiyya; al-Bayhaḳī and al-D̲j̲uwaynī, supporters of the "modes"; (3) this last, al-D̲j̲uwaynī, al-G̲h̲azālī's teacher in *kalām*, is already a forerunner of that line which Ibn K̲h̲aldūn calls "the moderns" and which continued to summarize and discuss the attitudes of the great *falāsifa*; this line gained glory from the most renowned *mutakallimūn*: al-G̲h̲azālī, al-S̲h̲ahrastānī, Fak̲h̲r al-Dīn al-Rāzī (one of the most original thinkers of this school), al-Iṣfahānī, al-Īd̲j̲ī, al-D̲j̲urd̲j̲ānī, al-Dawānī (on whose works Muḥammad ʿAbduh later wrote a commentary): these "moderns" did not refrain from employing a certain degree of (moderate) *taʾwīl* to explain the anthropomorphic elements in the Ḳurʾān (cf. al-Rāzī's *Kitāb Asās al-taḳdīs*); (4) the manuals of "fossilized conservatism", which merely repeated and systematized the solutions presented by the masters of old time, reproducing their replies to Muʿtazilīs or *falāsifa* who were progressively less familiar directly: the works of al-Sanūsī of Tlemcen, al-Laḳānī, al-Fuḍālī, al-Bād̲j̲ūrī.

D. *Māturīdī-Ḥanafī tendencies.* These became, with As̲h̲ʿarism, the second officially approved line of teaching. "Tendencies", we say deliberately, and not "school", believing correct the remarks of Father Allard on this subject (*Le problème des attributs divins dans la doctrine d'al-Ashʿarī et de ses premiers disciples*, Beirut 1965, 420). Al-As̲h̲ʿarī himself treated the Ḥanafiyya as a branch of the Murd̲j̲iʾa (*Maḳālāt*, i, 202-3). However, we are here concerned with a line of thought sufficiently coherent to deserve study in its own right.

It appeals on the one hand to the ancient texts entitled *al-Fiḳh al-akbar* and *Waṣiyyat Abī Ḥanīfa*, and on the other to al-Māturīdī of Samarḳand (d. 333/944), the author of a *Kitāb al-Tawḥīd* edited by one of his pupils. The Ḥanafī professions of faith (see A. J. Wensinck, *op. cit.*) have their peculiar chracteristics: the connexion between *islām* and *īmān*, the statement of faith by *ḳawl*, etc. But al-Māturīdī, in advance of his contemporary al-As̲h̲ʿarī, seems to have combated various *falāsifa* (and also dualists, materialists, esoteric sects; secondarily, Muʿtazilīs and anthropomorphists). Although he, like others, deals with the divine attributes and Names, the main question which concerns him is the creation of the world. It is very possible that he did not literally "found" a school, but all the same many *mutakallimūn* looked to him as a point of reference. In later years it becomes difficult to distinguish clearly between followers of al-As̲h̲ʿarī and of al-Māturīdī: although Fak̲h̲r al-Dīn al-Rāzī, al-Dawānī, al-Laḳānī are As̲h̲ʿarīs under the influence of al-Māturīdī, Abu 'l-Barakāt al-Nasafī and al-Taftāzānī may be regarded as belonging primarily to the Māturīdī-Ḥanafī line and only secondarily to As̲h̲ʿarism (they accepted the theory of atoms).

Indeed as compared with As̲h̲ʿarism, Māturīdī-Ḥanafism, as presented by certain manuals (*e.g.*, ʿAbd al-Raḥīm Ibn ʿAlī, *Kitāb Naẓm al-farāʾid*, Cairo, 2nd ed.) puts forward solutions which are more psychological and intellectuallist in character. As to the first: God creates in man the *aṣl*, the "root" of his acts, whatever they may be, but it is human freewill which gives them a good or an evil specification. As to the second (see ALLĀH, p. 413): the divine decree (*ḳadar*) and predetermination (*ḳaḍāʾ*) are no longer related to the divine will (as with the As̲h̲ʿarīs) but to the divine knowledge; and the connexions between the one and the other in time and in eternity are reversed [see AL-ḲAḌĀʾ WA'L-ḲADAR].

E. *Modern period.* The revival (*nahḍa*) of Arabo-Muslim thought, which has taken place from the end of the 19th century, has concerned particularly culture in the general sense, predominantly in the field of literature and under the strong influence of modern Western thought, but it has had its repercussions upon the "religious sciences". We have in mind here the reformism of the *Salafiyya*, and thus in exegesis (*tafsīr*) and in *uṣūl al-fiḳh*. Is it legitimate to speak of a resurgence in *ʿilm al-kalām?* To answer this question we adduce the *Radd ʿala 'l-Dahriyyīn* ("Refutation of the materialists") of D̲j̲amāl al-Dīn al-Afg̲h̲ānī (Cairo 1925), and, still more, the *Risālat al-tawḥīd* of Muḥammad ʿAbduh, and some other writings of the latter. Al-Afg̲h̲ānī's work, attacking contemporary "doubters and deniers" is prompted by a concern for defensive apologia. ʿAbduh's *Risāla* aims at being an attractive exposition of Islam calculated to affect and interest modern man. We may note that it defines *ʿilm al-kalām* as being "the establishment of religious beliefs and the explanation of prophecies", in order to "seek to conserve and establish religion" (Cairo 1353, 5).

The interest of the *Risālat al-tawḥīd* arises from the fact that it claims to reject nothing inherited from the great periods of the past and to put to profit the positive achievements of every school. Muḥammad ʿAbduh adheres primarily, but without rigidity, to As̲h̲ʿarism (divine names and attributes; no "end" to God's actions, etc.). But he does not hesitate to draw inspiration from attitudes customarily regarded as Māturīdī, or even to adopt Muʿtazilī positions. Hence arises his famous declaration: "The Law came to reveal what exists; but it is not the Law which made this good (*ḥasan*)" (*ibid.*, 80). ʿAbduh seeks to pass beyond the disputes of past ages in order to reconcile the various tendencies in *kalām*.

All the same, his rôle was less that of a thinker (or "theologian") than that of a reformer. When he

comes up against the mystery (*ghayb*) of divine Action on the world, he does not attempt to bring to bear on it his intelligence as illuminated by the revealed truth, in the way that such a thinker as Fakhr al-Dīn al-Rāzī felt himself obliged to do. In order to maintain both the affirmations of the faith and of human experience, he prefers to take refuge in an admission of ignorance: "As for going further, seeking to reconcile God's Omniscience and Will (which are proved to us) with man's freedom of action (which are demonstrated by evidence), that is to seek to penetrate the mysteries of the divine Decree; and we are forbidden to plunge into this abyss and concern ourselves with matters that reason is nearly incapable of grasping" (*ibid.*, 61; cf. Fr. tr. by Michel and M. ʿAbd al-Rāziḳ, Paris 1925, 43). The distinction should be noticed between "proof" (by the Ḳurʾānic text) of divine Omniscience and Will, and the (experimental) "evidence" of his freedom which man achieves. It may be said that in giving this reply Muḥammad ʿAbduh is not carrying forward *ʿilm al-kalām* but re-stating in new terms a traditional problem, and leaving it open.

III.—Method and problematic.

A. *Argumentation and types of reasoning.* Thus the solutions advanced and the criteria selected are extremely varied; but they have in common the fact that they always vary according to the doctrine being defended or the adversaries being opposed. We will limit ourselves to a few remarks on the two great "schools". Muʿtazilism sought to valorize, under the attacks of the *zanādiḳa*, the absolute Unity and the absolute Justice of God; but this valorization quite quickly becomes, thanks to the arguments advanced to bring conviction, a "justification": the divine Essence and Action become justified before and through human reason (*ʿaḳl*). It is to counter this reduction of the mystery that the Ashʿarīs take their stand, proclaiming the Omnipotence and the Omniscience of God, rejecting any ontological basis for human freedom of action, but seeking to refute the Muʿtazilīs (using the same weapons as they) and at the same time, on the other flank, anthropomorphists (*mudjassima*) of every shade.

In both cases, for Ashʿarīs as for Muʿtazilīs, the starting point for the dialectical arguments assumes that confidence may be placed in *ʿaḳl*, and that a harmony is to be acknowledged between religious law and the efforts of reasons brought to bear on it. This is, we believe, the primary basis of *ʿilm al-kalām*, that which above all makes of it an autonomous discipline—and not this or that cosmological or noetic theory, whether it is dealing with atoms or with modes. But whereas in Muʿtazilism reason may and should account for its agreement with the Law, in Ashʿarism it is the Law which defines the limits of reason and controls its activity. In both cases, the religious Law is the bearer of absolute truth—delimited, in the view of the Muʿtazilīs, by the criterion of *ʿaḳl*, whereas for the Ashʿarīs it is only because the Law enjoins upon him to do so that man may "reflect upon the signs of the universe".

The method of *ʿilm al-kalām* is thus basically explicative and defensive. It always postulates the existence of an opponent who is to be won over. Not merely the choice of arguments but even the method of presenting them will vary according to the nature of the opponents. It is noteworth that "rational" arguments were often the first to be advanced; they are primarily dialectical, and pursue very subtle lines of reasoning; whereas the "modern" manuals clothe them in a syllogistic guise. Up to al-Djuwaynī, and sometimes also with the "moderns", they are based on logic "with two terms", on the classical Semitic pattern, by way of implication and involution, or concordance, or opposition. A suggestive summary is found in the *Bayān ʿan uṣūl al-īmān* of al-Sumnānī, a disciple of al-Bāḳillānī (cf. Gardet and Anawati, *Introduction à la théologie musulmane*, Paris 1948, 358-61, 365-7).

"Rational" arguments are followed (or sometimes preceded) by "traditional" arguments, or, in other words, arguments from authority. These revolve around citations from the Ḳurʾān, on the one hand those adduced in direct support of an argument and on the other those quoted by opponents whose faulty interpretation of them is attacked. To these may be added *ḥadīth*s, sometimes numerous, sometimes few. This is especially the procedure of the first great Ashʿarīs. Most of them also rely upon texts guaranteed by *idjmāʿ*; "It is agreed that . . ." is a favourite argument. Al-Djuwaynī, among others, gives an important place to *idjmāʿ*. The fact that these "traditional" arguments are in some manuals listed *after* the "rational" arguments indicates that the former are to be regarded as a *confirmatur* to the results of dialectical reasoning. The defensive and apologetic character of *kalām* is thus manifested in its very recourse to the tenets of the faith to supply arguments.

From al-Djuwaynī onwards, the old-style dialectic and its reasoning from two terms yields place (without disappearing) to reasoning in three terms of the syllogistic type, with its universal middle term, and its recourse, implicit or explicit, to the principle of causality [see ʿILLA]. The *falāsifa* now become the usual opponents, as much as or more than the Muʿtazilīs. They must therefore be refuted on their own ground, and Aristotelian logic (with Stoic influences) becomes more and more influential in the arguments of *kalām*. The first manuals of the so-called "modern" tendency (the *Muḥaṣṣal* of al-Rāzī, the *Sharḥ al-Mawāḳif* of al-Djurdjānī, etc.) introduce questions regarding God and His Action with extended and purely rational discussions in which are surveyed the logical, cosmological, noetic and metaphysical themes of the *falāsifa*. Logic is here treated according to the Aristotelian schemas, sometimes with modifications (notably the four or even five figures of the syllogism). Yet the old argumentation from two terms does not entirely disappear; an indication of this may be found in the favourite selection of reasoning by the dilemma: this is probably Aristotelian in manner, but the implicit middle term is often suppressed in favour of the argument from authority (of a fact or of a text) or in favour of the dialectical judgement of existence [see BURHĀN].

The school of the "moderns" may be distinguished from the first generations of the Ashʿariyya by its advancing of more subtle solutions and its posing of some new problems. It is distinguished particularly by its use of the syllogism with a universal middle term and by its recourse to causality, even when, on the ontological plane, the efficacy of secondary causes is denied. Hence, to take a rather summary view, it is possible to re-classify the schools as follows: Muʿtazilī *kalām* and early Ashʿarī *kalām* are opposed in the doctrines they maintain but may share the same attitude to the problems and use the same methods of reasoning; early Ashʿarī

kalām and the Ashʿarism of the "moderns" support practically the same doctrines but differ perceptibly in their approach to the problems (adoption of "philosophical preambles") and more still in their methods of reasoning; finally, "fossilized conservatism" took up again the now classical doctrines and combined the dialectical and the syllogistic approaches, without always distinguishing one from the other.

Early Ashʿarī *kalām* (al-Bāḳillānī, al-Isfarāʾīnī, and al-Ashʿarī himself) professed, according to Ibn Khaldūn in his *Muḳaddima* (Cairo ed., 326, tr. de Slane, iii, 59), the "retroactivity of proofs", *i.e.*, "the nullity of a proof implies the nullity of that which it was sought to prove". It is thus, according to L. Massignon's comment (*Passion d'al-Ḥallāj*, Paris 1922, 550, n. 1), that al-Bāḳillānī declared the atomistic view of the world to be "co-essential" with the text of the Ḳurʾān. Such a procedure, Ibn Khaldūn adds, in which truths to be proved and probative arguments are interwoven, does not "conform to the rules of the art". This remark would be fully justified for a logical statement in three terms, but not in a dialectic of like and like (or its opposite). The "proof" to be adduced is no longer the result of a deduction. It, too, is a *fact*, a witness of truth. For al-Bāḳillānī, the atomistic discontinuity of the thing created "proves" the absolute transcendence and subsistence of God, the sole Agent, in the sense that this is its opposite correlative, its *muḳābal*, and that these two facts, presenting themselves to the spirit in a single apprehension, can only affirm themselves or deny themselves together (cf. Gardet and Anawati, *op. cit.*, 359; L. Gardet, *La dialectique en morphologie et logique arabes*, in *L'ambivalence dans la culture arabe*, by J. Berque, J.-P. Charnay, and others, Paris 1967, 125-30). It is less the strictly logical validity of reasoning by implication and its "conformity with the rules of the art" that is in question here than the degree of universality and probative validity of the two procedures, dialectical (with two terms) and syllogistic (with a universal middle term).

B. *The formulation of problems.* This study of the methods of thought and of argument employed in *ʿilm al-kalām* emphasizes that the struggle of Ashʿarism with Muʿtazilism is part of a continuous process. There is a split as to the chief doctrines professed but not (we cannot repeat too often) as to the type of arguments or the method of reasoning employed, nor as to the general lines or the plans of the treatises. From this point of view, *kalām*, as an established discipline, is greatly indebted to the Muʿtazilīs. Their five *uṣūl* continue, with some variants, to dominate the whole question: so it is in the *Lumaʿ* of al-Ashʿarī, and to a large extent also in the *Tamhīd* of al-Bāḳillānī.

From al-Djuwaynī onwards, however, and particularly from al-Rāzī, three new importations appear: (1) introductions or preliminary remarks, on the character of reasoning (al-Djuwaynī, *Irshād*), on the nature of *kalām* (al-Ghazālī, *Iḳtiṣād*), and finally on the general principles of logic, natural philosophy and ontology (al-Rāzī, al-Īdjī, al-Djurdjānī) become of ever increasing importance until they figure in the actual treatises themselves. (2) In the more strictly "theological" themes, a distinction arises between on the one hand the *ilāhiyyāt*, *i.e.*, the chapters concerning God, which (some attributes excepted) consist of a rational elaboration built up on scriptural bases, and on the other the *samʿiyyāt*, the "traditional" (*ex auditu*) chapters, whose very argumentation depends on positive data. The philosophical chapters and the *ilāhiyyāt* are combined under the term *ʿaḳliyyāt*; the *samʿiyyāt* deal with prophecy, with eschatology, with the decrees and the names (problem of faith) and with the enjoining of good. Some authors (al-Djuwaynī, al-Ghazālī) make prophecy a link between *ilāhiyyāt* and *samʿiyyāt*. (3) Finally, a distinction is made (a matter reconsidered by Muḥammad ʿAbduh) between "that which is necessary in God" (existence and attributes), "that which is possible for God" (visibility, creation of human acts, justification and reprobation, prophecy), "that which is impossible" in God and for God (the contrary of the attributes). These various additions are often intermingled. Al-Djuwaynī, insisting on the tripartite division of the necessary, the possible and the impossible, included prophecy and the creation of acts in the chapter treating of "what God can do", reserving the term *samʿiyyāt* for the other "traditional" chapters.

These new principles of distinction seem to be due to the influence of *falsafa*. It was in order to reply to the *falāsifa* that the preambles and the philosophical chapters became more numerous; the term *ilāhiyyāt* is part of the vocabulary of the *falāsifa*, and the distinction of the necessary, the possible and the impossible was made by them. The formulation of problems of the great Ashʿarī treatises of the "modern" age will therefore derive certainly from the old formulation of Muʿtazilism and its "five bases", but also from the organization of philosophical knowledge characteristic of the *falāsifa* (and in particular as presented by the *summa* or the compendium of Ibn Sīnā).

The richest and most detailed manual, the *Sharḥ al-Mawāḳif* of al-Djurdjānī, still studied in specialist courses of the great teaching-mosques, is arranged as follows: Two-thirds of the work (books-i-iv) treat of logic, natural philosophy and general ontology. The last third is divided between the *ilāhiyyāt* (the divine essence, the unity and unicity of God, His positive attributes, and His "possible" attributes, namely, visibility and cognoscibility), the Actions of the Almighty (creation of human actions), the divine names, and the *samʿiyyāt* (which are relatively short). There is no question here of a distinction between "philosophy" and "theology" in the Western sense and the attempt to harmonize them, but of a reply, which seeks to be exhaustive, to the treatises of the *falāsifa* or of the Muʿtazilīs. Since this reply seeks to use the weapons of the opponents, the vocabulary and the arguments of *falsafa* are found widely incorporated in *ʿilm al-kalām*. It is in a sense through the intermediary of the *mutakallimūn* that the influence of the "philosophers" penetrated Sunnī thought in general.

IV.—The position of *ʿilm al-kalām* in Muslim thought.—*ʿIlm al-kalām* remains one of the officially recognized religious sciences. But in the universities of Muslim countries the faculties of religious sciences are called *kulliyyāt al-sharīʿa*, a term generally rendered by "Faculties of theology"; *fiḳh* is there taught as much as, if not more than, *kalām*. *Kalām*, based as it is upon its function of defensive apologia, does not hold the leading place in Muslim thought that theology does in Christianity. To find an equivalent for "theology" in the Christian sense it is necessary to have recourse to several disciplines, and to the *uṣūl al-fiḳh* as much as to *kalām*. We turn now to establish the limits and results of this fact, and to place it in its historical context.

A. *Three opinions*. (a) In his *Iḥṣāʾ al-ʿulūm*, al-Fārābī groups the sciences according to the schemes of Aristotelian classification, appending to them the strictly Muslim disciplines of *fiḳh* and *kalām*. His summary of the methods of argument employed by the *mutakallimūn* is far from being laudatory; he emphasizes, to put it at its highest, its apologetic character, and seems to make of *kalām* an extension of *fiḳh*: "the *mutakallim* procures the supremacy of the principles which the *faḳīh* uses as bases but without deducing from them any new consequences" (ed. González Palencia, Madrid 1932, 56). (b) In his *Iḳtiṣād*, al-Ghazālī devotes three of the four chapters of his introduction (ed. Ankara 1962, 11-15) to the nature and the role of *ʿilm al-kalām*. This discipline has its place among the religious sciences because it is concerned with curing doubters of their doubts and refuting the denials of those who deny. But its role is essentially "medicinal"; hence the study of it, as the *Iḥyāʾ ʿulum al-dīn* states (ed. Cairo 1325/1933, i, 3), is an obligation upon the community (*farḍ al-kifāya*), but it is not the concern of every individual Muslim, for it could be dangerous for a simple soul firmly anchored in his faith. And the *Munḳidh min al-ḍalāl* (ed. Cairo 1372, 1952, 60) reproaches *kalām* for its insufficiently proved rational principles. (c) The authors of the great "modern" manuals (hence Īdjī-Djurdjānī) on the contrary esteem *kalām* so highly as to define it as the most exalted science of all, since it "proves" the truths known by faith. Some would make the study of it a personal obligation (*farḍ al-ʿayn*) on every Muslim capable of undertaking it. This estimate is repeated *verbatim* by the manuals of "fossilized conservatism". For al-Bādjūrī, for example (*Ḥāshiya ʿalā* (...) *Djawharat al-tawḥīd*, ed. Cairo 1352/1934, 26), faith through *taḳlīd* (meaning here mere acquiescence in what has been handed down) loses all value as compared with faith firmly rooted in science, *ʿan ʿilm*, such as *kalām* can provide.

B. *Opposition*. In fact throughout its history *kalām* had two great lines of opponents: on the one hand the Ḥanbalī (and Ẓāhirī) traditionists, who refused to bring rational arguments to bear on the absolute truths provided by faith; and on the other, the *falāsifa*, who passed from silence, indeed from a concealed opposition (Eastern *falāsifa*), to the most violent attacks (Ibn Rushd), when they themselves were attacked by the *mutakallimūn*.

(a) Ḥanbalī opposition. The great period for Muʿtazilī *kalām* was the reign of al-Maʾmūn, when it rose to the status of official doctrine. It was then that the doctrine of the "created Ḳurʾān" was imposed by the secular arm, the supporters of the doctrine of the "uncreated Ḳurʾān" were persecuted and condemned by the courts, and Ibn Ḥanbal himself was accused and flogged. This period was later called *al-miḥna*, "the testing". The reaction under al-Mutawakkil led Sunnī Islam to deliver a decisive blow against the Muʿtazilīs; they in their turn were dragged before the judges and their works (as we have noted) were destroyed. Now this historical movement, which (with G. Makdisi) we may call "the resurgence of traditional Islam in the 12th century" (*Ibn ʿAqīl*, Damascus 1963), remained at first under the influence of the "pious men of old", condemning any use of the reason, even the dialectic method, in making assertions relating to the faith.

It is true that the Ashʿarī reform at first had acknowledged its respect for Ibn Ḥanbal; but it also sought to overcome the Muʿtazilīs and to reply to them on their own ground. It had ambitions also to become the official doctrine of renascent Sunnism. The struggle between Ḥanbalīs and Ashʿarīs became sometimes sharp, even violent, and some authors were able to speak of a second *miḥna* when, after the death of al-Ashʿarī, his tombstone was destroyed in the cemetery of Baghdād. In the 5th/11th century, the vizier al-Kundurī had Ashʿarism cursed from the pulpits of Nīshāpūr, and al-Djuwaynī was obliged to take refuge in Baghdād (although soon afterwards Niẓām al-Mulk granted his favour to the Ashʿarīs). At about the same time, the Ḥanbalī mystic al-Anṣārī was writing his *Dhamm al-kalām wa-ahlih*, one of the most vigorous attacks we possess. In the 7th-8th/13th-14th centuries, the famous Ḥanbalī Ibn Taymiyya [*q.v.*] was to echo him, and to be himself attacked and condemned (to prison, for a time) under the pressure of the other juridical schools. When he mentions the opinions of the *mutakallimūn*, for whose solution of any problem he denies any validity, he adduces the Ḳadariyya and the Muʿtazila together, opposing to them only the Djabarīs, and thus not distinguishing the Ashʿarīs from them. (We should note that it is through the hearings granted to them by his Shīʿī opponents that he often attacks Muʿtazilī theses). It is true that *ʿilm al-kalām* ended by enjoying official recognition; but at the present day, wherever Ḥanbalism, and especially Ibn Taymiyya, exercise a considerable influence on contemporary movements for reform, the dialectical subleties of the schools and the treatises are regarded with some suspicion.

(b) The quarrel of the *Tahāfut*. Quite early on, the campaign to defend the faith pursued by *kalām* led it to challenge the *falāsifa*. Although it failed to overcome completely Ḥanbalī opposition, it may be said that up to the end of the 19th century, and perhaps even today in some circles of thought, it played its part in branding *falsafa* with a mark of heterodoxy and relegating it to a peripheral position.

The first great *faylasūf*, Abū Yūsuf al-Kindī, had some Muʿtazilī friends and was himself regarded as a *mutakallim*. But al-Fārābī (who made some severe criticisms of the methods of *kalām*) and Ibn Sīnā took their stand in a field of philosophical research which was quite different from that of the *mutakallimūn*. Unlike the Muʿtazilīs, wrote Aḥmad Amīn (*Ḍuḥā 'l-Islām*, iii, 204), "the *falāsifa* were philosophers first and men of religion afterwards; they concerned themselves with religion only when their philosophical speculation was in disagreement with it and in order to harmonize the two". We are now dealing not with a dialectical or apologetic defence of the faith, but with wide philosophical perspectives, which are largely inspired by Greek philosophy, though certainly containing some Muslim influences, and which aim to demonstrate their agreement *a posteriori* with the Ḳurʾān. Rational research holds the first place, and agreement with the doctrines of the faith is achieved often enough by means of a broad interpretation (*taʾwīl*) of the Ḳurʾānic text. The milieu in which al-Fārābī and Ibn Sīnā lived was strongly tinged with or even dominated by Shīʿī influences, and interpretative glosses of the Ḳurʾān were not uncommon. The orthodoxy of the "philosophers" was hardly ever called into question there. But things were different from the 5th/11th century onwards, after the Sunnī revival. Together with the Muʿtazilīs and the anthropomorphists, the *falāsifa* speedily became the opponents attacked by Ashʿarī or Māturīdī *kalām*. After objectively sum-

marizing their thought in the *Maḳāṣid*, al-Ghazālī undertook to refute them in the famous *Tahāfut al-falāsifa* (ed. Bouyges, Beirut 1927). He there denounced twenty of their tenets as erroneous, and branded four of them as incurring infidelity (*takfīr*): the eternity of the world *ante*, the eternity of the world *post*, the symbolic interpretation of the resurrection of the body, and the divine lack of knowledge of the individual as such. The autobiography of the *Munḳidh min al-ḍalāl* in its turn emphasized the errors of the "philosophers" and the danger for the faith which they represented. Some decades later al-Shahrastānī won the nickname of "adversary of the *falāsifa*".

Ibn Rushd's response came in the next century. In his *Tahāfut al-Tahāfut* (ed. Bouyges, Beirut 1930), he applied himself to refute al-Ghazālī and to justify the agreement between *falsafa* and Ḳurʾānic teaching; in the *apologia sua* of the *Faṣl al-maḳāl* (ed. and tr. L. Gauthier, Algiers 1942) and of the *Kashf ʿan manāhidj al-adilla* (*apud Falsafat Ibn Rushd*, Cairo 1313 and 1328), he calls into question even the legitimacy of *kalām*, accusing it of "cutting the Law into pieces" and "dividing people up utterly" (a similarly severe attitude to *kalām* is taken by Maimonides). It is remarkable that Ibn Rushd went so far as to re-employ (but more emphatically and severely) the criticisms which al-Ghazālī had first outlined (see above, IV, A, b). In fact Ibn Rushd, who was to play such a rôle in the history of the Latin Middle Ages, seems (unlike his Eastern predecessors) to have had little influence on Muslim thought.

All the later handbooks of *kalām* summarize and refute unflaggingly the position of the *falāsifa*, above all al-Fārābī and Ibn Sīnā, hence acquiring (as we have noted) their long philosophical introductions. It should be recognized here that although the *Muḥaṣṣal* of al-Rāzī and the *Sharḥ al-Mawāḳif* of al-Djurdjānī continue to condemn as false many tenets of the *falāsifa*, the resumés of them which they give are strongly analytical and aim at objectivity, whereas the refutations proposed are sometimes (especially in the *Muḥaṣṣal*), no more than general affirmations. It is nearly always eastern *falsafa* which is in question and which therefore continued to influence the developments of *ʿilm al-kalām*. We find a kind of mixed genre arising—a sort of *ʿilm al-kalām* impregnated by *falsafa*, or a sort of *falsafa* moving into the field of the problems which belong to *kalām*. This was not always to the advantage of either discipline. Finally we may mention the attitude of Ibn Taymiyya, as violently hostile to *falsafa* as to *kalām*; that of Ibn Khaldūn, who practically repeats, with regard to *falsafa*, the distinctions and criticisms of al-Ghazālī; and a third *Tahāfut*, the work of the Turk Khōdjazāde (9th/15th century), which, adopting al-Ghazālī's title, sought to refute the *Tahāfut al-Tahāfut* of Ibn Rushd.

C. ʿIlm al-kalām *and the juridical schools.* —*ʿIlm al-kalām* presents itself as an explanation and a defence of the faith. It is on these grounds that Muʿtazilism combated the *zanādiḳa* and the literalists of the first centuries, and that the Ashʿarīs challenged the Muʿtazilīs, the literalists and the *falāsifa*. We find however that the Ḥanbalī line or heterodox Ẓāhirism refuses to recognize the legitimacy of this undertaking. Now Ḥanbalism and Ẓāhirism are schools of *fiḳh*, and it is as such that they reject the dialectical argument of the *mutakallimūn* but propose to ensure, by their own procedures, this defence of the faith which *kalām* claimed for itself. Thus one may find in the works of such writers as Ibn Ḥazm or Ibn Taymiyya many expositions on the attributes of God, human actions, prophecy and faith, which convey as many or even more "theological" matters as (for example) some late and stereotyped manuals of Ashʿarism.

The other juridical schools, on the other hand, came to an easy accommodation with *ʿilm al-kalām*, its methods, and its argumentation. We are here dealing with attitudes arising from different families of thought, and the link between *kalām* and *fiḳh*, emphasized already by al-Fārābī, should never be forgotten. It may be said that Ashʿarism developed most easily in a Shāfiʿī, sometimes in a Ḥanafī, and later in a Mālikī climate; and that the so-called Māturīdī tendency was in its early days so closely linked with Ḥanafism that one can justly speak of a "Ḥanafī-Māturīdī" line. Finally, the welcome accorded to Muʿtazilism by non-Sunnī sects, principally Zaydism, is a point of considerable significance.

Thus if one wishes to establish the place of *ʿilm al-kalām* in Muslim thought, it should not be regarded as a discipline developing in a self-sufficient manner; it is linked with the other religious sciences, particularly *uṣūl al-fiḳh*, in a supple cultural unity which more than once dictated both the attitudes of its schools and the battles which it had to fight.

D. *Present-day situation.* Ibn Rushd's attacks failed to shake the legitimacy which *ʿilm al-kalām* was recognized to possess. The attacks of the Ḥanbalīs and the "pious men of old", on the other hand, left a legacy of distrust and suspicion. We find some traces of this at the present day, to the extent that the influence of the "men of old" (*salaf*) inspires the "return to the sources" advocated by modern reform movements. It is true that *ʿilm al-kalām*, as embodied in its most eminent doctors, remains as a venerated achievement of the great cultural centuries of Islam. But if one excepts the attempt of Muḥammad ʿAbduh, it is difficult to point to any modern and living renewal; it might be truer to speak of a certain alienation from *kalām*.

Two reasons may, it appears, be advanced: (1) For too long the teaching of this "religious science" in the great mosques had been given only by means of "fossilized" manuals, without any striking intrinsic merit and without originality. (2) The subject-matter of a defensive apologia for the faith is meaningful only so far as it relates to immediate issues. Now the content of these manuals is dictated by the refutation of adversaries (the Muʿtazilīs of the 3rd/9th century and the *falāsifa* of the 4th/10th century) who have long since vanished from the scene, whereas the burning problems of today are ignored. A defensive apology must be based on new themes. Are the efforts of al-Afghānī and ʿAbduh in this direction to be continued? Interesting as their attempts are, they fall far short of the philosophico-theological standard achieved by the great doctors of the past. Al-Afghānī and ʿAbduh were first and foremost reformers and men of action, not *mutakallimūn*.

We can conclude only with a series of questions. Will anything take the place of *ʿilm al-kalām*, with more widespread perspectives and serving a practical, rather than a speculative, attitude? Or shall we see a renewal, with regard to the tenets of the Muslim faith, in which the great questions raised in the past regarding God and man and the conditions for man's salvation will be taken up again, but this time taking account of the demands of scientific discoveries and present-day thinking? For this the

scholar would require a two-fold objective acquaintance both with the great works of the classical age and with contemporary problems.

It is appropriate to emphasize here the recovery of favour enjoyed today by Muʿtazilism: not directly for its defence of the Unity and the justice of God, but for its assertion of human liberty, in the very *élan* of belief in the One God, the Creator, the Almighty. As͟hʿarism no longer appears to be necessitated by the demands of the faith. Will there take place a synthesis of the different tendencies of *ʿilm al-kalām*, operating through a revised set of philosophical equipment? The study of the text of the Ḳurʾān and a more fully developed anthropology seem here to be called for, not to replace the "questions concerning God" (*ilāhiyyāt*), but to open wider perspectives for their discussion. From the 3rd/9th to the 9th/15th century *ʿilm al-kalām* enjoyed a glorious past and produced works which demand the historian's fullest respect. It may be hoped that a new *kalām*, perhaps quite different from the old in its methods, its arguments and its approach, will one day arise, to play its part in animating a cultural recovery in the religious sciences of Islam.

Bibliography: I.—Some classic works of (or concerning) *ʿilm al-kalām* beyond those mentioned in the text: Aḥmad Ibn Ḥanbal, *al-Radd ʿalā 'l-zanādiḳa wa 'l-d͟jahmiyya*, in *Dār al-Funūn Ilāhiyāt Fakültesi Med͟jmūʿasi*, 1927; Saʿid al-Dārimī, *al-Radd ʿalā 'l-d͟jahmiyya*, ed. (L. GARDET)

ʿILM AL-RID͟JĀL, according to the common technical meaning, is the science devoted to the study of the persons figuring in *isnāds*, with the purpose of establishing their moral qualities (and thus guaranteeing their truthfulness), the bibliographical details which will provide the necessary checks on either the materials transmitted or the *isnāds* themselves, and finally the exact identification of the names, to prevent confusion between persons of the same name. Among the Twelver S͟hīʿis, this science, which also very soon became a means of ideological differentation (in the earliest lists there already

appear the best-known partisans of ʿAlī or of one of the first *imāms*), gradually became confused with *ʿilm al-tarādjim*, which is merely a branch of Islamic historical research and thus in theory different from *ʿilm al-ridjāl* (which forms an integral part of *kalām*), although both of them claim to conform to precise and distinct Ḳurʾānic precepts. Hence there does not seem much point in the distinction made by some authors, which shows as the ancestor of the Twelver authors of *ridjāl* the Rāfiḍī (or perhaps Wāḳifī) Kūfan Abū Muḥammad ʿAbd Allāh b. Djabala b. Ḥayyān (or Ḥannān) Abḥar (or b. al-Ḥurr) al-Kinānī, d. 219/834 and referred to as dead in the *Taʾsīs al-Shīʿa* (p. 232, with many traditions taken from al-Nadjāshī, p. 160, who gives the variants of the name), while, on the other hand, giving as the first author of *tarādjim* (*Taʾsīs, loc. cit.*) the *Munshī* of ʿAlī b. ʿUbayd Allāh b. Abī Rāfiʿ, whose name appears, with others, in al-Nadjāshī (p. 4-5), who took a particular interest in *ridjāl*, and in the *Dharīʿa* (x, no. 84), according to which he is one of the most competent of the early writers in this field. It is therefore not surprising that the meaning of *ridjāl* changed from that of reporters of traditions sometimes tinged with ʿAlid activism, to that of scholars in general (and this means almost entirely Shīʿī scholars, because of the tendentious character of almost all the great Twelver collections of *ridjāl*, which often include persons of undoubted Sunnism); on this reference may be made to vol. i of the *Islamic Shīʿite Encyclopaedia* by Hassan Amin, who, s.v. *Biography*, lists 111 authors who devoted themselves to one or the other science, without distinguishing which.

The strict limitation of the term *ʿilm al-ridjāl* would exclude such works as the *Madjālis al-muʾminīn* or the *Ḳiṣaṣ al-ʿulamāʾ*, without which we should have a confused and inexact idea both of the importance and of the Twelver Shīʿī conception of the biographical science, an interesting expression of a culture pivoted on a precise sense of the need to refer, in every case and in whatever specific context, to the ever present *imāmī* model. To draw up a complete list of the Twelver biographical works, which has not yet been done and which would be very useful, would involve three sorts of difficulty: the enormous quantity of material which it is difficult to classify under one or other of the two genres because of the confusion mentioned above; the fact that many of the works mentioned in the various lists has not been published; and finally the fact that, without a published edition and the necessary comparison of manuscripts, it is not always possible to distinguish, by reference to the title alone, between works which are substantially independent and those which are merely elaborations and adaptations of others.

The first great names which may be mentioned are those of the *Fihrist* of Ibn al-Nadīm and the *Fihrist* of al-Ṭūsī, the second based directly on the former (cf. ʿAbbās Iḳbāl, preface to his ed. of the latter, pp. 2-3, no. 6), and both of a bibliographical character: this explains how, among texts considered as basic for biography, purely bibliographical compilations are often listed. We give here a brief list of some of the most important of the early works:

(1) *Maʿrifat akhbār al-Ridjāl* of al-Kashshī [*q.v.*].

(2) *Fihrist* of *shaykh* Abu ʾl-Faradj Muḥammad b. Isḥāḳ b. Abī Yaʿḳūb al-Nadīm, compiled circa 377/987. It concerns our subject in two places: in *al-fann al-thānī min al-maḳāla al-khāmisa*, in which it deals with the Shīʿī *ridjāl*, *mutakallim* as well as Twelver, and, more specifically, in *al-fann al-khāmis* and in *al-fann al-sādis min al-maḳāla al-sādisa*, devoted to the *fuḳahāʾ* and grammarians and to the traditionists respectively.

(3) *Fihrist kutub al-Shīʿa* (Nadjaf 1937) of the *shaykh al-ṭāʾifa* Abū Djaʿfar Muḥammad b. Ḥasan b. ʿAlī al-Ṭūsī, d. 459/1067; this is the earliest work specifically devoted to this subject and it has been much used by the Sunnīs, who have a high regard for it. Although it is based on material provided by the *Fihrist* of Ibn al-Nadīm, it completes it and adds more precise details on Shīʿī works and writers on *uṣūl*. Among the teachers of al-Ṭūsī on the subject of *ridjāl* mention should be made of Abū ʿAmr al-Kashshī, whose many (according to al-Nadjāshī) inaccuracies he corrected, and Abu ʾl-Ḥasan b. Ḥusayn b. ʿUbayd Allāh b. al-Ghadāʾirī, a famous writer whose work was later taken up by, among others, Ibn Ṭāʾūs.

(4) *Kitāb al-Ridjāl* (Nadjaf 1961) by the above-mentioned al-Ṭūsī; it deals in particular with the *ḥadīths* stemming from the Prophet and the first *imāms* and lists the names in alphabetical order with numbers within each letter.

(5) *Asmāʾ al-ridjāl* by the *shaykh* Aḥmad b. ʿAlī al-Nadjāshī, d. 455/1063. This work, sometimes listed under the title of *Kitāb al-Ridjāl*, is one of the most often quoted and consulted. It first deals briefly with the first Shīʿīs, after which the *ridjāl* follow in alphabetical order. One *bāb* is devoted to each *ism* and a final *bāb* contains the *kunyas*. To judge from the index of the edition by Muṣṭafawī, Tehran n.d., it covers 1226 persons.

(6) *Asmāʾ mashāyikh al-Shīʿa wa-muṣannafātihim*, of Muntadjab al-Dīn Abu ʾl-Ḥasan ʿAlī b. Abi ʾl-Ḥasan b. ʿUbayd Allāh b. al-Ḥasan ... b. al-Ḥusayn ... b. Bābūya al-Ḳummī. This work had been commissioned by the *naḳīb* of Ḳumm, Rayy and Ābah, ʿIzz al-Dīn Yaḥyā b. Abi ʾl-Faḍl Muḥammad al-Sharīf al-Murtaḍā, who, in entrusting the author with this task, informed him that nothing had been done in this field since al-Ṭūsī (which seems to indicate that Muntadjab al-Dīn did not know of the work of his contemporary Ibn Shahrāshūb). The date of this compilation cannot be later than 592/1196, the date when the *naḳīb* died, nor earlier than 573/1178, the date of the death of Ḳutb Rāwandī, mentioned as *marḥūm* in the work; it deals with the authors and *shaykhs* who were contemporary with or later than al-Ṭūsī and who are not found in the *Fihrist*.

(7) *Maʿālim al-ʿulamāʾ* (ed. A. Iḳbāl, Tehran 1934), of Abū Djaʿfar Muḥammad Rashīd al-Dīn b. ʿAlī b. Shahrāshūb al-Māzandarānī al-Sārawī [see IBN SHAHRĀSHŪB], d. 588/1192. This work, like all the above-mentioned, was written in Arabic, and is similarly conceived as a complement to the *Fihrist* of al-Ṭūsī, to which are added 300 brief biographies of *shaykhs* up to the compiler's contemporaries; it must have been compiled before 582/1186, the year during which the author mentions the *Maʿālim* in an *idjāza*. Among the teachers listed are Abū Manṣūr Aḥmad b. ʿAlī Ṭabarsī and Abū ʿAlī Faḍl b. Ḥasan Ṭabarsī, Ḳutb Rāwandī and Abu ʾl-Futūḥ Rāzī, the father of the author, Zayd, and Abu ʾl-Ḥasan Bayhaḳī; these names reveal the Shīʿī aims of the author. In the edition consulted, the number of persons described is 990; the first 874 are arranged in alphabetical order, divided into *bābs* consisting of one or more letters of the alphabet, with subdivisions of *faṣl*; numbers 875 to 962 are given under their *kunya*, and numbers 963-990 under their *laḳab* or a

nisba. The work ends with a bibliographical *faṣl* incorporated in the *bāb al-djāmiʿ*, which is followed by a very short *bāb* devoted to the poets of the *ahl al-bayt*; these are divided into four groups according to the genre of their compositions.

There follows a period of mere compilation until the *Ridjāl* of Taḳī al-Dīn Ḥasan b. ʿAlī b. Dāwūd al-Ḥillī, born in 647/1249-50, a pupil of al-Muḥaḳḳiḳ al-Ḥillī (Tehran .963-4), and until the work of Abū Manṣūr Djamāl al-Dīn Ḥasan b. Yūsuf b. ʿAlī b. Muḥammad b. Muṭahhar al-Ḥillī, d. 725/1325, who was the author, in particular, of a famous new *Kitāb al-Ridjāl* (Tehran 1932-3). These latter represent, at least for their successors, the undoubted masters of the period and they paved the way for the characteristic productions of the Ṣafawid period; in that period, within the framework of the genre of biography, the encyclopaedic spirit which prevailed from then on (as shown in, *e.g.*, the *Madjālis al-muʾminīn*, Tehran 1268/1852 and 1299/1882, written in Persian in 990/1582 by the *sayyid* Nūr Allāh b. Sharīf al-Marʿashī al-Shustarī) showed an interest in the local scholars who proclaimed the victory of Shīʿism in Iran: *Amal al-āmil fī ʿulamāʾ djabal ʿĀmil* (Tehran 1320/1902-3) of Muḥammad b. Ḥasan b. ʿAlī al-Ḥurr al-ʿĀmilī, d. 1097/1686, or *Luʾluʾatay al-Baḥrayn* (Tehran 1269/1853) of Yūsuf b. Aḥmad b. Ibrāhīm al-Baḥrānī, d. 1187/1773-4. These lead directly to the great modern biographical dictionaries, the most important of which are given in the bibliography and which, so far as material on the early Muslims is concerned, consist of a systematized reproduction of the details already collected since the early centuries of Islam rather than original monographs written by specialists.

ʿILMIYYE, the body of the higher Muslim religious functionaries (*ʿulamāʾ* [*q.v.*]) in the Ottoman Empire, especially those administering justice and teaching in the religious colleges [see MADRASA]. Their elaborate hierarchy, unprecedented in Islam, was headed, from the 10th/16th century onwards, by the *muftī* [*q.v.*] of Istanbul called *shaykh al-islām* [*q.v.*].

The organization of the *ḳāḍīs*, who formed the highest order of Ottoman *ʿulamāʾ*, changed over the centuries as a result of Ottoman expansion and withdrawals and of the variations in the relative importance attached to certain posts. Their division into several classes evolved gradually until it assumed a more or less definitive form in the 12th/18th century. The chief positions were the *Ḳāḍī-ʿasker* [*q.v.*], or, after his office was divided into two towards the end of the reign of Sultan Meḥemmed II (d. 886/1481), the *Ḳāḍī-ʿasker* of Rūmeli (*ṣadr-i Rūm*) and that of Anatolia (*ṣadr-i Anadolī*). Both were *ex officio* members of the imperial *dīwān* [see DĪWĀN-I HUMĀYŪN], while the *shaykh al-islām*, until the nineteenth century, was not. They nominated the provincial *ḳāḍīs* with the exception of the higher ones (*mollās*) who, as well as the *müderrises* and the *wāʿiẓes* of Istanbul mosques (see below), were in later centuries appointed on the advice of the *shaykh al-islām*.

Below the *ḳāḍī-ʿaskers* ranked the greater *mollās*, the highest of whom held the judgeships of the principal cities of the Empire with a salary of 500 *aḳče* a day. Later on they were subdivided into several classes. The highest was that of the judge of the capital (*Istanbul ḳāḍīsi* or *efendisi*), whose importance was enhanced by his authority over the guilds and responsibility for provisions and prices in the capital. Moreover, he and the judges of the town suburbs (see below) dispensed justice in the Grand Vizier's *dīwāns*.

Further down in the hierarchy were the judges of the two Holy Cities (*ḥarameyn*), Mecca and Medina. The latter was raised to the status of Mecca in 1135/1722 (Küčük Čelebi-zāde ʿĀṣim, *Taʾrīkh*, Istanbul 1282, 16 f.).

They were followed (since the eighteenth century) by the judges of the Four Cities (*bilād-i erbaʿa*): the two former capitals, Edirne and Bursa, and the two ancient seats of the caliphate, Cairo and Damascus. At a certain period Filibe (Plovdiv) was added as the fifth of the *bilād-i khamse*.

The next lower group included, in varying order, the judges of the suburbs of Istanbul (Galata and, at times, Eyyūb and Üsküdār), Jerusalem, Aleppo, Izmir, Salonika and Yeñishehir (Larissa), as well as, in certain periods, Trabzon, Sofia and Crete. They had the rank of *makhredj mollālari*, since these posts were given to *müderrises* "going out" of their class for the first time.

The judges mentioned so far were, strictly speaking, the only ones to carry the title of *mollā* (also *monlā* or *menlā*, from Arabic *mawlā* [*q.v.*]). In practice, however, this title was also granted to those immediately inferior to them in rank, the leaders of the so-called *dewriyye* posts. These were (since the eighteenth century) the judges of 10-13 important towns—Belgrade, Bosna-Sarāy (Sarajevo), Baghdād, ʿAyntāb, Marʿash, Diyār Bakr and others.

To the highest class of *mollās* also belonged in most periods the preceptor (*muʿallim*, or *khwādja*) of the Sultan, his two private *imāms*, the chief Palace physician (*hekīm-bashī* [*q.v.*] or *reʾīs al-aṭibbāʾ*) and the chief astrologer (*müneddjim-bashī* [*q.v.*]). From the end of the 11th/17th century the office of Dean of the Descendants of the Prophet (*naḳīb al-ashrāf* [*q.v.*]) used also to be bestowed on a *mollā* of this class descended from Muḥammad.

Lower in rank than the greater *mollās* there were, in addition, five special judges (*müfettishes*) for *waḳf* affairs—three in Istanbul (dealing with the

waḳfs under the supervision of the *shaykh al-islām*, the Grand Vizier and the Chief Black Eunuch, respectively), one at Edirne and one at Bursa. Other special judges were the *maḥmil ḳāḍīsi* who accompanied the annual pilgrim caravan to Mecca, the *ordu ḳāḍīsi* who joined the army when the Sultan (and the *Ḳāḍī-ʿasker*s) did not take part in the campaign, and the *donanma ḳāḍīsi*, who sailed with the fleet on its yearly cruise.

The lowest class of administrators of justice according to the *sharīʿa* was that of the *nāʾib*s [*q.v.*]. They either served as deputies of a judge, dealing with minor cases (*bāb nāʾibi*) or were in charge of a sub-division of his district (*ḳaḍā nāʾibi*), or acted as his substitute (*wekīl*) in case he did not come himself to his jurisdiction, the income of which was granted to him as *arpalıḳ* [*q.v.*]. The *nāʾib*s, who often were local *ʿulamāʾ*, held equal rank. Appointed, with the confirmation of the *Ḳāḍī-ʿasker*, by the judge for whom they deputized, they paid him a certain percentage of their income or a fixed monthly sum. In the period of Ottoman decline, the sale of *nāʾib* posts to the highest bidders and their bestowal on unqualified persons seriously corrupted the administration of justice.

In earlier periods the lesser *mollā*s did not rise to the higher grades but were restricted to rotation (*dewriyye*) within their group. Unlike them, a *mollā* of the first order could hope to be promoted according to established rules. Starting with a *makhredj* post, he might become judge of one of Four (or Five) Cities, thereafter of Mecca or Medina, then of Istanbul, and after serving as *Ḳāḍī-ʿasker* of Anatolia and/or Rūmeli he could reach the top, the office of *shaykh al-islām*.

Since the number of these high posts in the judiciary hierarchy was relatively very small, the pressure of the numerous aspirants led in later time to the introduction of intermediate ranks. Henceforth it became customary that before a *mollā* or ex-*mollā* rose to a higher rank he was granted the honorary title (*pāye*) of one of the judgeships of that rank. In the nineteenth century merely honorary ranks (*pāye-i müdjerrede*) were conferred on many *ʿulamāʾ*, officials and notables, who were never to serve as judges.

Completely separate from the greater and lesser *mollā*s became the corps of the ordinary *ḳāḍī*s, who served in smaller towns (*ḳuḍāt-i ḳaṣabāt*) and received a much lower salary (20-150 *aḳče*s a day). Their number, exceeding a thousand in the 11th/17th century, gradually decreased. In the late 12th/18th century there were no more than 456 such *ḳāḍī*s, organized in three groups—Rūmeli, Anatolia and Egypt—each subdivided into a number of classes. While promotion was possible from one class to a higher one, no one could usually pass over to another geographic group. The two most senior members of the highest class (called *sitte*) in each group (*ashrāf-i ḳuḍāt*)—the six *takhta-bashı*s—served as counsellors to their *Ḳāḍī-ʿasker*s in Istanbul.

At first Ottoman judges held a post for many years. To prevent abuse of authority and provide posts for the growing number of candidates, the usual term of office was gradually reduced to one year for *mollā*s and to 24, 20, 18 and finally 12 months for ordinary *ḳāḍī*s. While out of office (*maʿzūl*), they waited in Istanbul for a new appointment, presenting themselves every Wednesday at the *dīwān* of their *ḳāḍī-ʿasker*. While out of office (or in retirement) many *mollā*s resumed teaching at a *medrese*.

Almost all higher judges were recruited from among the professors (*müderris*) of these colleges, who formed the other principal hierarchy of Ottoman *ʿulamāʾ*. In earlier times there existed no strict rules for the promotion of the *müderris*es and their appointment to judicial posts. Later, however, admission to the clan of greater *mollā*s was granted only to the *kibār-i müderrisīn*, *i.e.*, professors at the Istanbul *medrese*s which belonged to one of the four highest of the twelve grades of colleges—Mūṣlle-i Süleymāniyye, Khawāmis-i (khāmise-i) Süleymaniyye, Süleymāniyye and, the highest of all, Dār al-Ḥadīth.

Since every year only eight (later eleven) of them "passed out" into this class of judges, promotions to the higher ranks of *müderris*es were necessarily limited. The main bottleneck was the important sixth grade of *medrese*s, the *Ṣaḥn-i Themān* or "Courtyard of the Eight [Medreses at the Fātiḥ Mosque]". Most of the numerous aspirants to these eight *müderris* posts got stuck in the immediately lower grade of the *Mūṣile-i Ṣaḥn*, therefore called "the bog" (*bataḳ*). To satisfy those waiting for promotion, the number of high *müderris* posts was gradually increased, and many nominal appointments were made at *medrese*s that no longer existed.

*Müderris*es at the lower-ranking *medrese*s of Istanbul and the provinces, including even the ancient colleges at Bursa and Edirne, could in later times apply only for a *dewriyye* post or become ordinary *ḳāḍī*s. In the provinces many *müderris*es served simultaneously as *muftī*s. Students (*softa*, *dānishmend*) who had not graduated from one of the higher-ranking *medrese*s of Istanbul were appointed *nāʾib*s or *muftī*s.

The preachers (*wāʿiẓ*) of the main mosques in Istanbul and other cities of the Empire formed a distinct order of the *ʿulamāʾ*. They were organized in a definite hierarchy, the highest position being that of the *Shaykh* of Ayasofya.

The *ʿIlmiyye*, like the other ruling institutions in the Ottoman Empire, began to decay about the end of the 10th/16th century. Favouritism, corruption and inefficiency increasingly spread among the high-ranking *ʿulamāʾ* charged with the administration of justice in the capital and the provinces (for details see ʿULAMĀʾ). The teaching in the *medrese*s suffered also from the general decline in the religious institution. Dogmatism more and more replaced the creative rationalism developed in the Ottoman *medrese*s under Meḥemmed II and Süleymān. The ignorance of the *ʿulamāʾ* trained in the *medrese*s could not but adversely affect the social and economic life of the Ottoman Empire. However, the *ʿulamāʾ* enjoyed the respect of the common people even in the 12th/18th century, when the abuses in the *ʿIlmiyye* reached their peak. This was probably due to the better conduct of the lower ranking *ʿulamāʾ*, who were in closer touch with the people.

By this time the *ʿIlmiyye* had become a conservative class led by an aristocracy of *Mollā* families, collaborating with the Janissaries to maintain their privileges. But the modernization movement, beginning in the early 12th/18th century, caused a decrease in the influence of the Ottoman *ʿulamāʾ*. The suppression of the Janissary Odjaḳ in 1826 deprived the *ʿIlmiyye* of military support in exerting their power on State affairs and permitted Sultan Maḥmūd II (1808-39) to establish the Ministry of *Ewḳāf* in 1834, thus ending their control over the *waḳf* lands, the main source of their wealth. Furthermore, the institution of the *niẓāmiyye* courts during the Tan-

ẓīmāt period restricted the jurisdiction of the *s̲h̲arʿī* courts to the area of personal law. Similarly, the establishment of secular schools largely took over the function of the *medreses* in the field of education.

Attempts to reform the *ʿIlmiyye* were undertaken from the early years of the eighteenth century. The *ḳānūns* issued by Sultan Selīm III (1789-1807) in the 1790's seem to have had some positive results in restoring order and discipline. Much more effective was the opening in Istanbul of the *Muʿallimk̲h̲āne-i nuwwāb* (1854) to train competent *ḳāḍīs* for the *s̲h̲arʿī* courts. An ambitious reform aiming at the modernization of the Ottoman religious institution took place under the Young Turk regime. Indeed, in 1914 the *Muʿallimk̲h̲āne-i nuwwāb* became the *Medreset al-ḳuḍāt*, and the *Dār al-k̲h̲ilāfe* was established in the same year in Istanbul to train able *müderrises* for the *medreses*. Modern subjects—social and physical sciences—were added to the traditional curricula in these new institutions.

The modernization of the Ottoman *ʿIlmiyye* did not bring lasting results; the newly established Turkish Republic abolished the Caliphate on 3 March 1924 and the suppression of the *ʿulamāʾ* and the laicization of the State followed.

ILS̲H̲ [see ALS̲H̲].

ILTIZĀM, as a term of rhetoric [see LUZŪM MĀ LĀ YALZAM].

ILTIZĀM, a form of tax-farm used in the Ottoman Empire. On the Ottoman *iltizām* in general, see MÜLTEZIM. The immediately following article deals with the *iltizām* in 19th century Egypt. (ED.)

The *iltizām* as an agrarian system was incompatible with Muḥammad ʿAlī's endeavour to establish a centralized bureaucratic régime in Egypt. During the period preceding his rule, *iltizāms* had come to be granted no longer for a year or even for a few years but for the lifetime of the holder, or even as heritable and alienable property. Thus the state was deprived of part of the agricultural revenue. In addition, the hereditary *iltizāms* formed the basis for the emergence of new centres of power. Important *multazims* of that period were tribal *s̲h̲ayk̲h̲s* and *ʿulamāʾ*, who in this capacity amassed considerable riches and achieved great political influence (D̲j̲abartī, iv, 68).

During the French occupation of Egypt an attempt had been made to abolish *iltizām* (cf. El Mouelhy, in *BIE*, xxx (1949), 197-228), but the system had been reinstituted later on. In the early years of his reign Muḥammad ʿAlī imposed a growing burden of direct taxes (*i.e.*, not levied through the *multazims*) on the fellahs, and confiscated part of the *multazims*' *fāʾiẓ* (profit), and in 1808-10 even the entire *iltizāms* of *multazims* who were unable to pay their dues. In March 1811 Muḥammad ʿAlī staged the great massacre of the Mamlūks, and later that year he set up a special *dīwān* which, by collecting information and hearing fellah grievances, undermined the standing of the *multazims* in the country. After the final defeat of the Mamlūks in Upper Egypt in April-May 1812 all *iltizāms* in Upper Egypt were confiscated without compensation. They were not transferred to other *multazims* but remained in the hands of the state under the name of *al-maḍbūṭ*. In February-March 1814 the *iltizāms* in Lower Egypt were likewise confiscated and the land transferred to the state. Here, however, former *multazims* received an annual grant for life (which later became hereditary) equal to their former *fāʾiẓ*. Despite strong pressure from the army and the *ʿulamāʾ* in 1815-6, Muḥammad ʿAlī managed to maintain his reforms and buy off the claimants and rebels with empty promises.

Ūsya land, the part of the *iltizām* granted to the *multazim* for his own use, was confiscated along with the *iltizāms* in Upper Egypt. In Lower Egypt the agitation of the *multazims* resulted in their being allowed usufruct rights on such land. Originally *ūsya* was supposed to revert to the state on the death of the *multazims*, but these latter made a practice of endowing their *ūsyas* as *waḳf ahlī*. In order to forestall this, Saʿīd decreed, in 1855, that whoever possessed rights to *ūsya* was permitted to bequeath them, and that such land would revert to the state only on the extinction of the family's line.

The annual pension of the Lower Egyptian *multazims* was small, because they had in general contrived to reduce payments to the state by declaring a smaller income than they had had in fact; moreover, it was reduced at frequent intervals and paid only in part. Between 1821 and 1835 it declined from 6,000 to 2,500 *kīs*; it was superseded according to laws of the years 1889 and 1894 by a single, once-for-all, payment.

All the foregoing relates to *iltizām* of the land tax only; the farming (*iltizām* or *muḳāṭaʿa*, in European sources *appalto*) of urban taxes, of the sale or production of specified goods and of the supply of certain services persisted until the 1870's. Such *iltizāms*, which were put up for auction (*mazād*), included at different periods the following: customs and octrois, stamp duty, sale of salt, wines and spirits, senna, various seeds, and palm-leaves, the farming of specific markets (the cattle market as late as 1900), hunting and fishing (the Maṭariyya fishing as late as 1893), textile and other factories which had been established by Muḥammad ʿAlī at the time of their decline (in the 1850's and 1860's), the publishing of the Official Gazette (1863), transport on the boats of the Nile, slaughterhouses, weighing in various towns, auctions, and fees on successions. Laws of 1843 and 1855 laid down regulations for the attendance of *multazims* at auctions, prohibited collusion among them and fixed penalties for selling at exorbitant prices, extortion of excessive dues and other offences. *Iltizāms* were abolished as soon as suitable officials and clerks could be found by the

state to take over services or levy dues directly. Their abolition usually resulted in a considerable rise in revenue.

(G. Baer)

ILTUTMISH, B. ĒLAM KHĀN, the greatest of the so-called Slave kings who laid the foundations of Muslim rule in India, came of the Ilberī (or Alprī) branch of the Ḳarākhitāʾī Turks. The third sultan of the Slave dynasty and the founder of the Shamsiyya line of rulers, he ascended the throne of Delhi in 607/1211 after defeating Ārām Shāh, son and successor of his master Ḳuṭb al-Dīn Aybak [q.v.], who had purchased him as a slave in Delhi. Nothing in detail is known about his early life except that he spent a part of it in slavery at Ghazna, Bukhārā and Baghdād. He very soon won the confidence of Aybak, who rapidly promoted him to high offices of state and married his daughter to him. Before his accession to the throne he successively held the governorship of Gwāliyār [q.v.], Baran and Badāʾūn [q.v.], and finally became the commander-in-chief. Historians do not brand him ungrateful, for he occupied the throne only with the approval of the *ʿulamāʾ* and at the invitation of the nobles, who were dissatisfied with the rule of Ārām Shāh. The first three or four years of his reign were spent in preparing to meet the threat posed by Tādj al-Dīn Yïldïz, governor of Ghazna as the suzerain of India. In fact he issued letters patent to Iltutmish as his viceroy. On being driven out from Ghazna by ʿAlāʾ al-Dīn Muḥammad Khwārazmshāh in 611/1214, Yïldïz took refuge in Lahore, seized the city and expelled the governor who held it on behalf of Nāṣir al-Dīn Ḳabāča, the ruler of Multān and also a son-in-law of Aybak. Iltutmish, as Ḳabāča's sovereign, protested, and on Yïldïz's refusal to withdraw marched against him and defeated him in a pitched battle at Tarāʾoṙī in 612/1215. Yïldïz was taken prisoner and despatched to Badāʾūn, where he died in confinement the same year. Thereafter Ḳabāča re-occupied Lahore, and in 614/1217 Iltutmish had to dislodge him forcibly. In 619/1221 Djalāl al-Dīn Khwārazmshāh, fleeing from the Mongols, also sought refuge in Lahore and asked Iltutmish for asylum. Sensing danger to his dominions, Iltutmish diplomatically warded off the threat by diverting the Khwārazmians towards the refractory Ḳabāča whose territory they plundered and on whom they also levied heavy tribute.

Feeling now secure at home, Iltutmish in 622/1225 marched against Bengal, where Ghiyāth al-Dīn ʿIwaḍ Khaldjī had declared his independence. On Iltutmish's approach ʿIwaḍ lost heart, submitted to the sultan and acknowledged his overlordship. Next year Iltutmish turned to Ranthamboṙ and Mandāwar (near Bidjnawr) and captured both places.

Firmly settled on the throne, he now decided to settle old scores with his rival Ḳabāča. He consequently attacked in 625/1227 Uččh [q.v.], the seat of Ḳabāča's government, and invested the town, which surrendered after a heroic resistance of some three months. In the meantime Ḳabāča, who had fled to Bhakkar [q.v.], was drowned in the Indus while trying to escape.

After the defeat of Ḳabāča, Malik Sinān al-Dīn Čanēsar, the ruler of lower Sind and Daybul [q.v.], acknowledged the supremacy of Iltutmish and became his vassal. In 626/1229 an embassy, led by Raḍī al-Dīn Ḥasan al-Ṣaghānī [q.v.], bringing the robes of honour for the sultan, his sons and the nobles, arrived from the ʿAbbāsid caliph, al-Mustanṣir bi'llāh [q.v.] and was received with great pomp. This is the first occasion when an Indian Muslim ruler was recognized by the caliph as the sultan of India. To mark the occasion Iltutmish issued a new silver coin bearing the legend "*Nāṣir Amīr al-Muʾminīn*", showing his allegiance. It was also inscribed in Nāgarī on the billon currency.

Next year (627/1230) Iltutmish had again to march to Bengal, where, on the death of his son and deputy Nāṣir al-Dīn Maḥmūd, confusion prevailed and a certain Balkā Khaldjī had risen in revolt. The rebel was brought to book, peace was restored in the country and the sultan returned to his capital. In 630/1233 Iltutmish after a prolonged siege recaptured Gwāliyār which had reverted to the Hindūs. In 632/1234 he invaded Mālwā, captured the fort of Bhīlsā, sacked Udjdjayn and demolished the sacred temple of Mahākālī, together with the stone image of Rādjā Vikramādityā, after whom the current Hindū era is known.

Soon after his triumphal return from Mālwā a serious religious disturbance broke out at Delhi. The Ismāʿīlīs, who had come to establish themselves at Delhi, after having been driven out from their former stronghold of Multān by Muḥammad Ghūrī, made an attempt on the life of the sultan while engaged in the Friday prayer. The sultan escaped unhurt but the heretics were hunted down and killed. As a measure of retaliation and in order to mop up suspected pockets of Ismāʿīlīs in Multān, Iltutmish in 633/1235-6 mounted an expedition against the Gakkhaṙs [q.v.], who then professed Ismāʿīlism. There was reason to suppose that it was they who were behind the plot against his life. He, however, fell seriously ill on the way, was carried back to Delhi, and after a rule of 26 years, died in Shaʿbān 633/April 1236.

An enterprising, able and efficient monarch, he has been described as the foremost of the slave kings. A deeply religious man, he had great respect for the *mashāʾikh* and *ʿulamāʾ*. Among the literati who adorned his court were Amīr Rūḥānī, the poet and philosopher, who had migrated from Bukhārā, Sadīd al-Dīn Muḥammad ʿAwfī, author of *Lubāb al-albāb* and *Djawāmiʿ al-ḥikāyāt*, and Minhādj-i Sirādj al-Djūzdjānī [q.v.], the celebrated historian. In 629/1231-2 he founded the famous Ḳuṭb Mīnār, in honour of the saint Khwādja Ḳuṭb al-Dīn Bakhtyār Kākī, to whom he was deeply devoted, and in 627/1229 built the Ḥawḍ Shamsī, the water reservoir of old Delhi. For those seeking justice he had a bell with a chain installed on the gate of his palace which anyone could ring (cf. Ibn Baṭṭūṭa, iii, 164). Ably helped by the capable vizier Fakhr al-Dīn ʿIṣāmī, who had served the caliphs in Baghdād, he streamlined the administration, as is reflected in the manual of Fakhr-i Mudabbir, the *Ādāb al-ḥarb wa'l-shadjāʾa*, which was presented to the sultan. The inner circle of *ghulāms*, known as the *čihl-gānī* (Forty), grew very powerful and gained historic significance during his reign. It was they who op-

posed the nomination of his daughter Raḍiyya as his successor to the throne, while Iltutmish lay on his deathbed; they were, however, disbanded by Balban.

(A. S. BAZMEE ANSARI)

ILYĀS is the name given in the Ḳurʾān (VI, 85 and XXXVII, 123, with a variant Ilyāsīn, perhaps prompted by the rhyme, in verse 130), to the Biblical prophet Elijah; the form Ilyās derives from Ἠλίας, a Hellenized adjustment, but attested also in Syrian and Ethiopic, of the Hebrew name Eliyāh (ū): cf. Jos. Horovitz, *Koranische Untersuchungen*, 81, 99, 101. In the Ḳurʾān, the figure of Ilyās scarcely shows any outstanding features, except for one allusion (in XXXVII, 125) to the worship of Baal. In the Muslim legend related by later authors, there may be noted on the one hand the more or less faithful use of the Biblical facts (I Kings XVII to II Kings II), with a genealogical linking, inspired by the Jewish Aggada, of Ilyās to the priestly line of Aaron (Hārūn) through Pinḥas; and on the other hand the confusion of the character of Elijah/Ilyās with al-Khaḍir (-Khiḍr) and Idrīs [*qq.v.*]. The legend of more especially Biblical inspiration therefore reports, with details which vary according to the authorities, the drought caused by the intervention of the prophet to whom God had transmitted His power over the rain, the choice of Elisha (Alīsaʿ [*q.v.*]), confused with the son of the widow of Zarephath, as a disciple, the episodes of the priests of Baal, of Naboth, and of the soldiers sent to arrest the man of God, the ascension on a horse (in the Bible: a chariot) of fire, etc. To this last episode is added the transfiguration of Ilyās into a creature half-human and half-angel; although it is not possible to assign to it a precise source, this speculation reflects Jewish legends. The immortality attributed to Ilyās and to his homologue Khaḍir makes these two characters into supernatural beings, practically guardian spirits, who share, in varying ways according to the various documents, the function of being able to save those in desperate situations, by land and by sea. For the same reason they held and still hold an important role in mystical initiation, as well as in popular beliefs.

The speculations which already appear in the New Testament on the mystical identity of John the Baptist and Elijah are the subject of an allusion in al-Djāḥiẓ, *Tarbiʿ*, ed. Pellat, § 40, cf. index, p. 21.

(A. J. WENSINCK-[G. VAJDA])

ILYĀSIDS, a minor dynasty which ruled in Kirmān in south-eastern Persia during the middle decades of the 4th/10th century. Their establishment there marks the final severance of Kirmān from direct Caliphal control, which had been restored earlier in the century after the collapse of the Ṣaffārid empire.

The founder, Abū ʿAlī Muḥammad b. Ilyās, was a commander in the Sāmānid army and of Soghdian origin. He was involved in the revolt against the Sāmānid Amīr Naṣr b. Aḥmad of his brothers in 317/929, and when the rebellion collapsed in 320/932, he withdrew to Kirmān and seized power there. He withstood Sāmānid forces sent against him, but in 324/936 had to flee temporarily to the Ṣaffārids in Sīstān when a Būyid army under Aḥmad b. Būya (the later Muʿizz al-Dawla) invaded Kirmān from Fārs. The Būyid forces later withdrew and Muḥammad b. Ilyās returned; he was now unmolested in his principality, whilst recognising the nominal overlordship of the Sāmānids. Some sources condemn Muḥammad b. Ilyās as an *ʿayyār* and *ṣaʿlūk, i.e.*, as an adventurer and brigand, and it does seem that he had understandings with the predatory Ḳufṣ and Balūč mountaineers of Kirmān for the division of their spoils. On the other hand, the Arab geographers credit him with considerable activity in building and charitable works throughout the province. During his reign, the capital of Kirmān was transferred from Sīradjān in the west, which had been the chief town in the early Islamic period, to Bardasīr or Gwādasīr (the later city of Kirmān), apparently as a protective measure against the neighbouring Būyids of Fārs.

Muḥammad b. Ilyās died in 356/967, having at some time before this made over Kirmān to his son Ilyasaʿ. Ilyasaʿ maintained his power against his brother and rival Sulaymān. However, he was not long able to withstand the powerful and agressive Būyid Amīr ʿAḍud al-Dawla [*q.v.*]. He was speedily driven out by the latter, and fled to the Sāmānids (357/968). This really marks the end of Ilyāsid rule

in Kirmān, except that further members of the family continued for some years to hover round the borders of Kirmān seeking an opportunity to intervene. Sulaymān and another Ilyāsid, al-Ḥusayn, led armies in Kirmān, aided by the turbulent Ḳufṣ and Balūč, but without success. After 364/975, the Ilyāsids disappear from recorded history, and the Būyid hold on Kirmān was henceforth undisturbed until Ghaznavid times.

Bibliography: The main sources are Miskawayh and Ibn al-Athīr, to be supplemented by ʿUtbī's *Yamīnī*, by scattered notices in the geographers and by the 6th/12th century local history of Kirmān, the *ʿIḳd al-ʿulā* of Afḍal al-Dīn Aḥmad b. Ḥāmid Kirmānī; see also Zambaur, *Manuel*, 216. All these sources are utilized in the study of C. E. Bosworth, *The Banū Ilyās of Kirmān*, in the *Minorsky memorial volume* (*forthcoming*).

(C. E. Bosworth)

ʿIMĀD AL-DAWLA, ʿAlī b. Buwayh (or Būyeh), the eldest by many years, but the least known, of the three Daylamī [*q.v.*] brothers who became the founders of the dynasty of the Buwayhids or Būyids [*q.v.*]. At first in the service, together with a group of his compatriots, of the Sāmānid Naṣr b. Aḥmad (321-9 [*q.v.*]), then of his lieutenant in Iran, Mākān b. Kākī [*q.v.*], he betrayed the latter in favour of his rival Mardāwīdj [*q.v.*], from whom he obtained, in equivocal circumstances (and thanks to his relations with the secretary of the governor of Rayy, the father of the future vizier Ibn al-ʿAmīd), the governorship of Karadj and of the Māh al-Baṣra [*q.v.*]. By means of calculated acts of generosity with funds drawn from the treasuries and storehouses, in particular of the Khurramīs, to which he managed to gain access, he gathered round him there a large number of Daylamīs ready to serve the employer who offered most. This naturally aroused the anxiety of Mardāwīdj, who prepared to attack him. Then ʿAlī, taking the initiative, occupied for a short time Iṣfahān, which he was unable this time to hold, and then, definitively, the citadel of Arradjan [*q.v.*], where he set himself up in open rebellion (321/923). In the following year he drove out from Fārs the caliph's governor Yāḳūt, in spite of the support received by the latter from the independent governor of Baṣra, al-Barīdī [*q.v.*]. Threatened by a combined offensive by all his enemies, he obtained from the caliph's vizier Ibn Muḳla [*q.v.*] his official recognition as *muḳtaʿ* of Fārs, attempted to negotiate with Mardāwīdj, and was finally saved, without apparently being involved himself, by the assassination of Mardāwīdj at the beginning of 323/935. He thus became master of the situation in central Iran, operated a policy of combined force and diplomacy towards the various neighbouring princes or governors, sent his brother al-Ḥasan (the future Rukn al-Dawla, 329/940-1) to occupy Rayy, while the other brother Aḥmad (the future Muʿizz al-Dawla), extended his power over Kirmān and Khuzistān, whence he finally seized Baghdād and brought the caliph under his control (334/945). It was then that the three brothers acquired the honorifics by which they are known in history. At this time, ʿImād al-Dawla, old and grown feeble, was attempting mainly to obtain more peaceful relations with the Sāmānids to the north-east and to ensure a peaceful succession to the man he had chosen to follow him: in the absence of a son of his own, the son of his brother Rukn al-Dawla, Fanākhusraw, the future ʿAḍud al-Dawla. Thus there took place his interview in Ahwāz with his brother Muʿizz al-Dawla, soon after which he died (338/949). All that is known of his governorship is the way he sought out various treasuries in order to distribute them among his army. He had at that time a Christian secretary, Isrāʿīl b. Mūsā, who fell victim to intrigues by Muslim rivals. The establishment of Muʿizz al-Dawla in Baghdād, in spite of the superiority which this conferred on him in the eyes of many Muslims, never prevented ʿImād's considering himself, and being considered by his brothers, as head of the family.

Bibliography: See art. BŪYIDS. Since that article was published there have appeared several important studies on the Būyids in general which, although they mention ʿImād al-Dawla only in passing, may be mentioned here (with the addition of the thesis by Mafizullah Kabīr, now published as *The Buwayhid dynasty of Baghdad*, Calcutta 1964): J. C. Bürgel, *Die Hofkorrespondenz ʿAḍud al-Dawla*, Wiesbaden 1965; C. E. Bosworth, *Military organisation under the Buyids of Persia and Iraq*, in *Oriens*, xviii-xix (1967), 143-67; H. Büsse, *Chalif und Grosskönig, Die Buyiden in Bagdad*, 1968.

(Cl. Cahen)

ʿIMĀD AL-DĪN Muḥammad b. Muḥammad al-Kātib al-Iṣfahānī, famous stylist and historian, born at Iṣfahān in 519/1125 of a distinguished family to which belonged also the famous *kātib* al-ʿAzīz, whose biography is given in Ibn Khallikān, *Wafayāt*, ed. Wüstenfeld no. 77 (cf., concerning him, Houtsma. *Recueil*, ii, preface, XIX ff.). He spent his youth in his native town and at Ḳashān, but studied in Baghdād, in particular *fiḳh*, and made a journey to Mosul and other places. When the Saldjūḳid sultan Muḥammad II laid siege unsuccessfully to Baghdād in 551/1156, ʿImād al-Dīn was in the city and congratulated the caliph on the failure of the siege in a *ḳāṣida* which earned him the favour of the vizier Ibn Hubayra [*q.v.*]. The latter appointed him his *nāʾib* at Wāsiṭ; but after the death of the vizier (Djumādā I 559/March-April 1164), he lost his position and passed the next two years in some poverty. Finally, thanks to the patronage of the vizier al-Shahrazūrī, he turned to the Zangids of Syria, who knew his family, especially his uncle al-ʿAzīz mentioned above. Thus he received a benevolent welcome: he was appointed *kātib* by the sultan Nūr al-Dīn and, later, *mudarris* in a *madrasa* built in his honour. In addition, he was entrusted with a diplomatic mission to the caliph and ended by being appointed *mushrif* of the *Dīwān*. But after the death of Nūr al-Dīn in 569/1173, his enemies succeeded in supplanting him, so that he was forced to abandon his office and to go to Mosul. There he fell ill, but recovered and returned to Syria when he learned that Ṣalāḥ al-Dīn was planning to invade it. When the latter had taken Ḥimṣ (652/1175), ʿImād al-Dīn sent him his greetings in a poem, gained great influence with him and accompanied him on all his expeditions. After Saladin's death (589/1193), he returned to private life and devoted himself to literary work until his death (597/1201).

He produced a voluminous anthology of the Arab poets of the 6th/12th century, the *Kharīdat al-ḳaṣr wa-djarīdat ahl al-ʿaṣr* (part on Egypt, Cairo 1951; on ʿIrāḳ, Bágdad 1955; on Syria, Damascus n.d.; on Maghrib, Tunis 1966), which is a continuation of *Yatīmat al-dahr* of al-Thaʿālibī [*q.v.*]; ʿImād al-Dīn completed his anthology with some notes written, like his other works, in a scholarly and mannered style, in the tradition of the *kuttāb*, the high-ranking secretary-epistolographers of the administration

(notably Hilāl al-Ṣābiʾ and al-ʿUtbī). In the same style and on a wider scale, he wrote the most remarkable of his works, *al-Fatḥ al-Ḳussī fi'l-fatḥ al-ḳudsī* ("Ḳussian eloquence [see ḲUSS B. SĀʿIDA] on the conquest of Jerusalem"; ed. Landberg, Leiden 1886; also Cairo 1322 (French trans. by H. Massé, in the press) beginning, as he says in his introduction (text p. 3) "at the beginning of 583"/ 13 March 1187; while admiring the author's verbal virtuosity, it must be admitted that the complications of style and vocabulary (antitheses, synonyms, phrases with double meanings, conceits, archaic expressions, and allusions, says de Slane, *H.O.C.*, iv, v) often mar this masterpiece, the narrative and documentary merits of which are undoubted; it is the work of an eye-witness—embracing warlike operations, the authority, the activities and the qualities of the sultan, and the role that ʿImād al-Dīn played by the writing of his diplomatic letters (several of which he inserts verbatim in his book). "His account has the value of a first-hand source, by an eye-witness or by an archivist who makes use of chancery documents" (G. Wiet).

In addition to *al-Fatḥ al-Ḳussī*, ʿImād al-Dīn's historical works are as follows: —

1. *Nuṣrat al-fatra*, the first history of the great Seldjūḳs. The nucleus of the work was the lost Persian memoirs of Anūsharvān b. Khālid (d. 738/1137: cf. Browne, ii, 36 and index), which ʿImād al-Dīn rendered into Arabic, with much additional material and stylistic embellishment. Completed in 579/1183, it survives only in an abridgement made in 623/1126 by al-Bundārī [*q.v.*], and published by T. Houtsma in *Recueil*, ii.

2. *al-Barḳ al-Shāmī* (562/1166-589/1193), an autobiographical account of the wars of Saladin, whom he served as secretary. Two parts only survive in manuscript, both in the Bodleian. They are part iii, covering the years 573/1177-575/1179, and part v, covering the years 578/1182-579/1183. An abridgement by al-Bundārī of the first (?) half, entitled *Sanā al-Barḳ al-Shāmī*, exists in a unique manuscript in the Esad Efendi collection in Istanbul, and will shortly be published in an edition by Dr. R. Şeşen. It covers the years 562/1166-583/1187. There are extensive and numerous citations from the *Barḳ*, in an abridged form, in the *Rawḍatayn* of Abū Shāma [*q.v.*].

3. Continuations after the death of Saladin, up to ? 597 are cited as *al-ʿUtba wa'l-Uḳba* (Abū Shāma, ii, 228-31), *Niḥlat al-Riḥla* (*ibid.*, ii, 231-2), *Khatfat al-Bāriḥ waʿaṭfat al-Shāriḥ* (*ibid.*, ii, 233-45). They are also mentioned by al-Bundārī in his introduction to the *Sanā*, as three volumes on three years.

Bibliography: Brockelmann, I, 314-5; S I, 548-9; Ibn Khallikān, no. 715; *H.O.C.*, iv, pp. III-v; Wüstenfeld, *Die Akademien der Araber*, no. 62; H. A. R. Gibb, *Al-Barq al-Shāmī the history of Saladin by the Kātib ʿImād ad-Dīn al-Iṣfahānī*, in *WZKM*, lii (1953), 93-115; J. Kraemer, *Der Sturz des Königreichs Jerusalem (583/1187) in der Darstellung des ʿImād ad-Dīn al-Kātib al-Isfahānī*, Wiesbaden 1952; Lewis and Holt, *Historians*, index. (H. MASSÉ)

ʿIMĀD AL-DĪN ZANKĪ [see ZANKĪ].

ʿIMĀD AL-MULK, GHĀZI 'L-DĪN KHĀN, FĪRŪZ DJANG (III), was named Shihāb al-Dīn after his great-grandfather Ghāzi 'l-Dīn Khān, Fīrūz Djang I [see SHIHĀB AL-DĪN, MIR]. His mother was the daughter of the *wazīr*, Ḳamar al-Dīn Khān (d. 1161/1746). He was eight years old when his father, (Mīr) Muḥammad Panāh [*q.v.*] died suddenly at Awrangābād in 1165/1752 during his abortive attempt to seize the viceroyalty of the Deccan. On his father's departure for the Deccan, Shihāb al-Dīn had been left behind at Delhi in the care of the minister, Abu 'l-Manṣūr Ṣafdar Djang [*q.v.*]. He seems to have been a precocious but cunning child, much older than his years, for he ingeniously obtained, early in life, the office of *Mīr Bakhshī* (Quartermaster-general) with the help of Ṣafdar Djang. Fired with ambition, he turned against his patron and in 1167/1754 called in the Marāṭhās, who deposed and blinded Aḥmad Shāh (1161-7/1748-54) and installed ʿAlamgīr II as emperor of Delhi. A born diplomat, he was well-versed in the art of statesmanship. In 1169/1755, on the death of his maternal uncle Mīr Muʿīn al-Mulk (Mīr Munnū) b. Iʿtimād al-Dawla Ḳamar al-Dīn Khān, who was governor of the Pandjāb, he captured Lahore and made it over to Ādīnā Bēg Khān, the paramour of Mughulānī Bēgam, widow of Mīr Munnū. Aḥmad Shāh Abdālī [*q.v.*], furious at the rise of this upstart, at once marched on Lahore (1170/1756), expelled Ādīna Bēg Khān and soon thereafter went to Delhi with ʿImād al-Mulk in attendance. ʿImād al-Mulk now sided with the Durrani chieftain and took part in the operations against Sūradj Mal Djāt of Bharatpur [*q.v.*] and Shudjāʿ al-Dawla of Awadh [*q.v.*]. His ingratitude earned the displeasure of the Abdālī, who appointed Nadjīb al-Dawla *Amīr al-Umarāʾ* of Hindustan. On Aḥmad Shāh's departure from India ʿImād al-Mulk, seeking revenge, besieged Nadjīb al-Dawla in the fort of Delhi and had the effete emperor ʿĀlamgīr II murdered in 1173/1759. This enraged the Abdālī, who marched out to India and succeeded in inflicting a crushing defeat on the Marāṭhās, allies of ʿImād al-Mulk, at the third battle of Pānipāt in 1175/1761.

ʿImād al-Mulk's game of power-politics was now practically over. Afraid of his powerful adversaries, he sought protection among the Djāts and stayed for a time with Sūradj Mal; on his death in 1177/1763 he went to live with Aḥmad Khān Bangash, Nawwāb of Farrūkhābād (d. 1185/1771). Two years later, he went to the Deccan and received some land in Kālpī from the Marāṭhās in consideration of his past services. Feeling insecure there, he went to Sūrat to live with the British; he was seen by Col. Goddard disguised as a pilgrim and was for a time put into confinement (cf. Mill, *History of India*, ii, 414). After his release he went on the Pilgrimage to Mecca, and was seen in Sind in 1195/1781, having returned to India *via* Baṣra and Ḳandahār. He subsequently sought service with Tīmūr Shāh Abdālī (*reg.* 1187-1207/1773-93) and was in the employ of Zamān Shāh (*reg.* 1207-16/1793-1801) when he invaded the Pandjāb in 1211/1797. He lingered in obscurity for some time and died at Kālpī on 10 Rabīʿ II 1215/1 September 1800, aged 54 years.

A *ḥāfiẓ*, a good scholar and a fine penman, he composed poetry in Persian, Arabic, Urdu and Turkish under the pseudonym (*takhalluṣ*) of "Āṣaf", which he later abandoned for "Niẓām". His Persian *dīwān* (MSS in British Museum and at Leningrad) was published in 1301/1883-4. His other poetical compositions include a poem in praise of ʿAlī b. Abī Ṭālib (*Manḳabat-i Niẓām dar madḥ-i ʿAlī*), a *ḳaṣīda* and some *mathnawī*s on the miracles of the saint Fakhr al-Dīn Čishtī Shāhdjahānābādī, whose life also he wrote under the title *Manāḳib-i Fakhriyya* (ed. Delhi 1315/1897). He had four sons, of whom Ḥamīd al-Dawla entered the service of

Niẓām al-Mulk Āṣaf Djāh II and obtained the rank of "5,000".

Irvine, *Later Mughals*, Calcutta 1922, ii, 141, 295, 300; Storey, i/1, 623, i/2, 1028-30 (where several other references are given).

(A. S. Bazmee Ansari)

ʿIMĀD SHĀHĪ, the title of a ruling family, founded by a Hindu convert to Islam, which ruled over Berar [*q.v.*] for nearly a century from 896/1490 until 982/1574. The founder of the dynasty, Daryā Khān, better known to history by his title Fatḥ Allāh ʿImād al-Mulk, was descended from the Canarese Brahmans of Vidjyanagar [*q.v.*]. He fell as a prisoner of war in 827/1423 into the hands of Khān-i Djahān, the commander-in-chief of the Bahmanī [*q.v.*] forces in Berar, who appointed him to his personal bodyguard. Impressed by his talents and ability Khān-i Djahān quickly promoted him to offices of trust and distinction. After the death of his master, Fatḥ Allāh joined the court at Bīdar [*q.v.*] and through the good offices of the chief minister Khwādja Maḥmūd Gāwān [*q.v.*] received the title of ʿImād al-Mulk from Muḥammad Shāh Bahmanī II (*reg.* 867/1463-887/1482). In 876/1471 he was appointed governor and commander of the forces in Berar, *i.e.*, to the office which his former master Khān-i Djahān had occupied. It appears however that towards the end of his life, although technically owing allegiance to the court at Bīdar, he considered himself the virtual ruler of Berar, as was done by the early Nawwāb-Wazīrs of Awadh [*q.v.*] during the Moghul rule.

Partly because the founder of the dynasty was a convert, who had risen to power through military exploits, and partly because the rulers had little love for literature and art, no history of this dynasty was ever recorded and no man of letters paid any attention to the story of their rise and fall. Were it not for references to this dynasty in the histories of the neighbouring kingdoms, practically nothing would be known about them (Firishta devotes a separate section of his work to this dynasty). No buildings or works of art or public utility constructed during their rule have been discovered; they rather devoted their time to the welfare of their subjects and the prosperity of their state. Another reason for their not finding a historian to record their deeds was that theirs was the only Sunnī kingdom in a cluster of Shīʿī states attracting Iranian men of letters, some of whom settled down in the subcontinent and took to the profession of writing. Consequently even the boundaries of this state are not precisely known. It is known however, to have extended from the Andjādrī hills to the Gōdāwarī, while on the west it bordered on Aḥmadnagar and Khāndēsh [*qq.v.*]. Its eastern limits are uncertain; the region, including the site of the present-day city of Nāgpūr, was covered with jungle.

Soon after his appointment as governor of Berar, Fatḥ Allāh was sent on an expedition against Rāi Vidjay Singh of Vīragadh. He reduced the fort after a siege of six months, compelling the ruler to evacuate his ancestral home "leaving behind his public treasures and hereditary wealth". In 877/1472, along with the chief minister Maḥmūd Gāwān and Yūsuf ʿĀdil Khān, who was later destined to become the founder of the ʿĀdil Shāhī dynasty of Bīdjāpūr, he took part in the expedition against Belgām, which was conquered and added to the *djāgīr* of the chief minister. On the execution of Maḥmūd Gāwān on a charge of treason in 886/1581, ʿImād al-Mulk became apprehensive of his own safety and showed signs of disaffection. Muḥammad Shāh Bahmanī II, fearing an open rebellion, placated him by confirming him in his government of Berar. In 887/1482, on the accession of Maḥmūd Shāh Bahmanī II, a lad of twelve, he was raised to the office of a minister in reward for the slaughter of "foreigners" (*gharībān*), the supporters and adherents of Yūsuf ʿĀdil Khān, the governor of Bīdjāpūr, thus paving the way for Niẓām al-Mulk, a Dakhni nobleman, to usurp all power for himself (the king being a minor). At the same time Shaykh (Firishta purposely uses this word—used in the subcontinent as an honorific for converts to Islam belonging to respectable families—to show their non-Muslim origin) ʿAlāʾ al-Dīn, the eldest son of ʿImād al-Mulk, was appointed his father's deputy in Berar. In course of time ʿImād al-Mulk became so powerful that in conjunction with Niẓām al-Mulk he conducted all the affairs of the government during the minority of the king, enjoying throughout the support of the queen-mother. Maḥmūd Shāh, smarting under the overbearing attitude of the two ministers and provoked by the casual remark of a Ḥabshī [*q.v.*] courtier, ordered their assassination. Both of them, however, managed to escape with their lives, being expert swordsmen. ʿImād al-Mulk retired to his government of Berar, nursing a grudge against the monarch and watching for an opportunity to shake off his yoke.

A few years later he declared his independence in 890/1484, striking his own coins and causing the *khuṭba* to be read in his own name. Yet he refrained from calling himself "Shāh", either out of respect for the royal family whom he had once served or (more probably) out of political expediency. He was not destined to enjoy the fruits of independence long, as in that very year he died. He was succeeded by his son ʿAlāʾ al-Dīn, who, confident that the effete Bahmanī monarch could not assert himself, assumed the title of Shāh in 896/1490; he established his court at Kāvēl, following the example of Malik Aḥmad Baḥrī, son of the late Niẓām al-Mulk and Yūsuf ʿĀdil Khān of Bīdjāpūr, who had earlier in 895/1489 declared their independence, the former founding the city of Aḥmadnagar [*q.v.*].

In 910/1504 Amīr ʿAlī Barīd, son of Ḳāsim Barīd, the regent of Bīdar [*q.v.*], who had won full control over Maḥmūd Shāh Bahmanī, in league with Malik Aḥmad Baḥrī invaded the territories of Yūsuf ʿĀdil Shāh in order to punish him for professing the Shīʿa faith (all the other states around and the entire Muslim population of the Deccan were Sunnī). Yūsuf ʿĀdil Shāh struck back strongly, compelling Maḥmūd Shāh and Amīr ʿAlī Barīd to seek help from others, including ʿImād al-Mulk.

This "aged and experienced statesman" as Firishta describes him, resolved to maintain strict neutrality, and having perceived the intentions of Amīr ʿAlī Barīd, who was exploiting religion only to destroy Yūsuf ʿĀdil Shāh, interceded with the king on behalf of Yūsuf ʿĀdil Shāh. Amīr Barīd, now left practically alone, fled from the field along with the king, leaving the royal camp to be looted by the allies.

Ten years later, in 920/1514, Maḥmūd S͟hāh, whose prestige had suffered considerably and who was now tired of the overbearing behaviour of Amīr ʿAlī Barīd, escaped to Kāvēl and, with the help of ʿImād al-Mulk's troops, marched on Gulbarga [*q.v.*], the capital of Barīd. Barīd decided to give battle and sallied forth from the citadel. Meanwhile, Maḥmūd S͟hāh, who was weak both in body and mind owing to old age, suddenly decided to change sides and join the troops of Amīr ʿAlī Barīd, thus putting ʿImād al-Mulk in a difficult situation. ʿImād al-Mulk immediately repaired to his own country, leaving the fickle king to his fate. After this misadventure, Maḥmūd S͟hāh, unfit to carry on the duties and functions of state any longer, gave himself up to a life of dissipation and debauchery and died soon thereafter.

In 934/1527 Amīr ʿAlī Barīd occupied the forts of Māhūr and Rāmgir; these were in the possession of K͟hudāwand K͟hān, the Ḥabs͟hī minister of Bahādur S͟hāh of Gud͟jarāt. who applied to ʿImād al-Mulk for help. The latter at once marched out with his troops and was able to recover the two forts without a blow and proceeded to annex them to his own kingdom. This act of usurpation aroused the hostility of Burhān Niẓām S͟hāh I [see NIẒĀM S͟HĀHĪS]. Consequently, frequent battles were fought between the two ruling houses, who were also related to each other, resulting in the defeat of ʿAlāʾ al-Dīn ʿImād S͟hāh.

In 930-1/1524-5, ʿAlāʾ al-Dīn joined hands with Burhān Niẓām S͟hāh I, his former enemy, to recover the fort of S͟hōlāpūr, which Ismāʿīl ʿĀdil S͟hāh had promised to give to his sister Maryam as part of her dowry when she was given in marriage to Burhān Niẓām S͟hāh. Ismāʿīl ʿĀdil S͟hāh stoutly opposed this joint invasion and finally ʿImād al-Mulk fled.

Yet he continued to smart under the insult that he had suffered at the hands of Burhān Niẓām S͟hāh. Consequently in 933/1527 he occupied the fort of Pātrī, belonging to Burhān Niẓām S͟hāh, at the instigation of Ismāʿīl ʿĀdil S͟hāh and Sulṭān Ḳulī Ḳuṭb S͟hāh of Golconda [*q.v.*]; it was recovered after a siege of two months by Burhān Niẓām S͟hāh, who later completely destroyed it. Flushed with his victory Burhān S͟hāh proceeded to reduce some other places in Berar, spreading panic in the land. ʿImād al-Mulk, finding himself unable to withstand alone the onslaught of the Aḥmadnagar troops, fled to Burhānpūr [*q.v.*] and sought the help of its ruler Mīrān Muḥammad S͟hāh Fārūḳī in repelling the invasion. The allies, however, suffered a crushing defeat at the hands of Burhān Niẓām S͟hāh, losing their guns and elephants. Mīrān Muḥammad S͟hāh, burning for revenge, appealed to Bahādur S͟hāh (*reg.* 932/1525-943/1537) of Gud͟jarāt, who was also his maternal uncle, to come to their relief. Bahādur S͟hāh readily agreed and marched in 934-5/1527-8 towards the Deccan with a large army. When he reached D͟jālnapūr his intentions changed and he thought of seizing Berar. ʿAlāʾ al-Dīn ʿImād S͟hāh, sensing his intentions, lost no time in satisfying his vanity and readily acknowledged his supremacy by having the *k͟huṭba* read in his name. By this act of expediency he not only saved his own territory but induced Bahādur S͟hāh to attack Aḥmadnagar and humble its sovereign. Burhān Niẓām S͟hāh, being unable to resist such a powerful monarch as Bahādur S͟hāh, had to submit to the invader. Bahādur S͟hāh reached Aḥmadnagar unopposed and took up his residence in the palace of Burhān Niẓām S͟hāh I, where he regaled himself for forty days. Burhān Niẓām S͟hāh I, however, continued to harass the Gud͟jarāt troops by frequent skirmishes until he was obliged to sue for peace and to promise to return the forts and elephants he had captured (although he later broke his word). The object being achieved, both ʿImād al-Mulk and Mīrān Muḥammad S͟hāh returned jubilantly to their respective capitals.

Two years later, in 937/1532, ʿAlāʾ al-Dīn ʿImād al-Mulk died and was succeeded by his eldest son Daryā ʿImād S͟hāh. He was married to K͟hadīd͟ja, a sister of Ismāʿīl ʿĀdil S͟hāh of Bīd͟jāpūr (and not to his daughter as inadvertently stated by Firis͟hta in another place, cf. Brigg's trans., iii, 488), and born of a Hindu princess, whom Yūsuf ʿĀdil S͟hāh had married. A consummate statesman, he was well-versed in the art of diplomacy, as was shown on the occasion when he found himself in a difficult situation as a result of the march of Bahādur S͟hāh against Aḥmadnagar, whose ruler, although his close relative, did not scruple to engage in an armed conflict with ʿImād S͟hāh, and who had to pay for his fault by submitting to the Gud͟jarāt monarch.

The history of the reign of Daryā ʿImād S͟hāh is so dispersed throughout the pages of Firis͟hta that it requires patient research to piece it together. His account is extremely meagre; nevertheless, it is from the work of this author supplemented by the *Burhān-i maʿāt͟hir*, that a readable account of his reign can be gleaned. The story is so involved and entangled that even a clear-headed and experienced historian like Firis͟hta confused Daryā ʿImād S͟hāh with his father ʿAlāʾ al-Dīn ʿImād S͟hāh in describing the events after 939/1532 (although on Firis͟hta's own showing ʿAlāʾ al-Dīn ʿImād S͟hāh had died in that year). He admits that he failed to obtain any written account of the ʿImād S͟hāhīs and hence had to depend on oral traditions and hearsay (cf. Brigg's trans., iii, 500).

In 949/1542 Burhān Niẓām S͟hāh along with his ally Amīr Barīd, taking advantage of a serious rift between Ibrāhīm ʿĀdil S͟hāh and his able minister Asad K͟hān Lārī, marched against Bīd͟jāpūr and besieged it. Ibrāhīm ʿĀdil S͟hāh, deprived of his experienced minister's advice and finding himself unable to oppose the invaders single-handed, approached Daryā ʿImād S͟hāh, his kinsman (here Firis͟hta confuses him with his father. cf. Brigg's trans., iii, 92) for help, who readily acceded to his request; the combined forces of Berar and Bīd͟jāpūr compelled the invaders to raise the siege and to sue for peace. This successful military adventure raised the ʿImād S͟hāhī prestige high and the ruling prince came to be looked upon as a powerful monarch whose voice counted in the Deccan. To strengthen his position further, ʿImād S͟hāh married his sister Rābiʿa to Ibrāhīm ʿĀdil S͟hāh in 950/1543. This naturally aroused the jealousy of Burhān Niẓām S͟hāh, the old enemy of his house, although Daryā ʿImād S͟hāh soon after his accession had tried to placate him by marrying his daughter Bībī Dawlat to Ḥusayn Niẓām S͟hāh, a son of Burhān S͟hāh by his wife Amīna, who was later to succeed him. The very next year (951/1544) some differences cropped up between Ibrāhīm ʿĀdil S͟hāh and Daryā ʿImād S͟hāh, which provided Burhān S͟hāh with an opportunity to invade Bīd͟jāpūr. He formed an alliance with Sadās͟hivarāy (Rāmarād͟ja of the Muslim historians), the Hindu ruler of Vid͟jyanagar [*q.v.*], and the S͟hīʿī ruler of Golconda. It is not known what role was subsequently played by the ʿImād S͟hāhīs in the battles that took place between the combined Muslim forces and the troops of Vid͟jyanagar. It is hard to believe

that while the combined Muslim states were closed in a fierce struggle against the Hindus, the state of Berar, professing the orthodox faith, should have remained aloof. It is probable that personal grievances, such as the murder of Djahāngīr Khān, rather than religious motives were responsible for the estrangement between the kingdoms of Aḥmadnagar and Berar. Soon after Ḥusayn Niẓām Shāh's accession, his full brother ʿAbd al-Ḳādir fled from Aḥmadnagar and sought asylum in Berar. Earlier, such a prominent noble as Sayf ʿAyn al-Mulk, who held the rank of commander-in-chief under Burhān Niẓām Shāh I, had similarly sought refuge in Berar from the oppression of Ḥusayn Niẓām Shāh. Firishta places this event in 959/1551—which is puzzling, as Burhān Niẓām Shāh I was still alive in that year. The authorities agree that he died in 961/1554 (corroborated by the chronogram *zawāl-i khusrawān*), the year in which also died Maḥmūd Shāh III of Gudjarāt and Islām Shāh Sūr [*qq.v.*]. In any case, we find him on the side of Ibrāhīm ʿĀdil Shāh, his brother-in-law, who was then espousing the cause of Shāh ʿAlī, his nephew, a son of Burhān Niẓām Shāh and his sister Maryam. He was a pretender to the throne of Aḥmadnagar against his step-brother Ḥusayn Niẓām Shāh, the ruling prince. Daryā ʿImād Shāh seems to have been drawn against his will into this struggle for power, inasmuch as we find him playing only a passive rôle, most probably out of regard for his sister's son. Here Firishta's account is both perplexing and confusing. He places the insurrection of prince ʿAlī, while describing the events of the reign of Ibrāhīm ʿĀdil Shāh, in 959/1551 (cf. Brigg's trans., iii, 106), yet while writing the history of his father Burhān Niẓām Shāh he says that the latter was still alive in 961/1553 (cf. Brigg's trans., iii, 235). It is difficult to reconcile the dates.

However, in the engagement that took place at Shōlāpūr between the ʿĀdil Shāhī forces and the Niẓām Shāhī forces, Daryā ʿImād al-Mulk was put in charge by Ibrāhīm ʿĀdil Shāh of the right flank (*maymana*), while he commanded the centre in person. At a critical juncture Ibrāhīm ʿĀdil Shāh lost heart and fled from the field, wrongly believing that his ally Sayf ʿAyn al-Mulk had crossed over to his former master's son and successor Ḥusayn Niẓām Shāh. The fate of ʿImād al-Mulk is not known, but it may be assumed that he too returned to his capital unmolested. Thereafter he is not heard of any more, and in the words of Firishta seems to have enjoyed a reign of great tranquillity and peace till his death in 969/1561 (cf. ʿAbd al-Ghafūr, *Taʾrīkh-i Dakan*, ii, 79).

He was succeeded by his son, Burhān ʿImād al-Mulk, who was then only three years old. Tufāl Khān Dakhnī, his minister, began to rule as regent. An ungrateful and ambitious man, he usurped all power in 976/1568 and placed the young king in confinement. This usurpation was much resented by the people of Berar, who began to seek an opportunity to restore the boy-king to the throne.

In 973/1565 Murtaḍā Niẓām Shāh, taking advantage of the minority of the king, invaded Berar in conjunction with ʿAlī ʿĀdil Shāh of Bidjāpūr. They laid the country waste, and on the approach of the rainy season returned to their capitals. Soon afterwards Berar was invaded by Mīrān Muḥammad Shāh, the ruler of Khāndēsh. Burhān ʿImād Shāh appointed Djagdev Rāʾu, the disaffected minister of Golconda, to command the forces of Berar, and he defeated the Khāndēsh troops in several engagements. In 980/1572 Murtaḍā Niẓām Shāh, who had been planning for some time to subjugate Berar again marched out with a large army with the intention of overthrowing the usurper and annexing the kingdom to his own dominions. Tufāl Khān, unable to withstand the Aḥmadnagar troops, ultimately shut himself up in the hill-fastness of Narnāla and appealed to Akbar, the Moghul emperor, for help. Akbar asked Murtaḍā Niẓām Shāh to hold his hand and withdraw, and henceforward Berar was his responsibility. Murtaḍā Niẓām Shāh, however, paid no heed to the warning and proceeded to reduce all the principal forts in Berar, including Narnāla. During the operations Tufāl Khān, along with his prisoner Burhān ʿImād al-Mulk and some followers, was captured and confined in one of the fallen forts. Shortly thereafter they were all found dead one morning while still in confinement; some say they were poisoned while others maintain that they were suffocated, the room being too small to contain all of them. With the death of Burhān ʿImād Shāh in 982/1574 the ʿImād Shāhī dynasty came to an end, after ruling over Berar for nearly a century. A pretender Fīrūz, claiming to be a natural son of Daryā ʿImād al-Mulk, marched out at the head of a considerable force against Berar, actively supported by Muḥammad Shāh Fārūḳī of Khāndēsh. He was, however, routed and his adherents were dispersed by the Niẓām Shāhī troops. Berar henceforward ceased to exist as an independent principality.

ʿIMĀDĪ, 6th/12th century Persian writer of *ḳaṣīdas*, generally known by the names of ʿImādī Ghaznawī and ʿImādī Shahriyārī. He began his career as a soldier in the army of Sulṭān Masʿūd III

of Ghaznīn (d. 508/1114), and later migrated to the court of ʿImād al-Dawla Farāmarz at Rayy, in whose praise he composed the largest number of odes. Some time before ʿImād al-Dawla's death, ʿImādī made a second migration to the Court of the Saldjūḳid Sulṭān Tughrul b. Muḥammad b. Malik Shāh (d. 529/1134). Among his many patrons, the following may be mentioned:

Malik Arghun b. Alp Arslān (d. 489/1096); Malik Tughān b. Alp Arslān; ʿImād al-Dawla Farāmarz (d. 530/1135); Sulṭān Tughrul b. Muḥammad; Ḳawām al-Dīn Abu 'l-Ḳāsim, chief minister of Tughrul (d. 527/1132); Abū Manṣūr al-Muẓaffar ʿAbbādī (d. 547/1152); Amīr ʿAbd al-Raḥmān Tughāyrak (d. 541/1146). ʿImādī's original *Dīwān* has been lost. Taḳī Kāshī claims to have seen four thousand verses of ʿImādī. The extant *Dīwāns* are four: three in the British Museum and one in the ʿAligarh University MSS. Section. MS. Or. 3,500 of the British Museum Library contains the largest number of ʿImādī's extant verses, namely 1734. ʿImādī's reputation as a poet is indicated by the fact that several notable contemporary poets, namely Sayyid Ḥasan-i Ghaznawī, Adīb-i Sābir b. Ismāʿīl Tirmidhī, Falakī Shirwānī, Ḳawāmī Rāzī, Saʿd al-Dīn Asʿad b. Shihāb of Bukhārā, Madjd al-Dīn b. ʿAdnān, Yūsuf b. Naṣr al-Kātib, took his verses as a model. He is highly praised by most of the notable biographers of poets.

ʿImādī's death took place between 530/1135 and 550/1155, probably nearer the former than the latter.

(M. SHAMOON ISRAELI)

IMĀLA, "inflection" (verbal noun of fourth form, *amāla*), a phonetic phenomenon. It consists in "*alif*'s tending towards *yāʾ* and *fatḥa*'s tending towards *kasra*" (Ibn al-Sarrādj, *Mūzadj*, 139). Modern phonetics regards it as a palatalization, produced by a rising movement of the tongue towards the prepalatal region. Depending on the extent of this movement, the vowel *a* shifts from its zone of articulation to that of *ę* or to that of *e* (or even to that of *i*). Arab grammarians distinguish an *imāla shadīda*, "strong" (probably a > *e*) and an *imāla mutawassiṭa*, "medium" (probably *a* > *ä*). The question arises particularly with regard to long *ā*, and it is this that will be considered here.

Arab grammarians speak of *imāla* as a phenomenon conditioned by the presence of a *kasra* (*i*) or a *yāʾ* (*y*) in the neighbourhood of the *alif* (*ā*); these draw the *alif* towards themselves, in order to make it more like them. Chapter 477 of Sībawayhi deals with the *imāla* of *alif* when there is a *kasra* in the syllable that immediately follows or precedes it, such as: *ʿālim* "knowing", *masādjid* "mosques", *kilāb* "dogs", *shimlāl* "swift (she-camel)"; similarly *bayyāʿ* "seller", *kayyāl* "measurer of grain". The following, however, are without *imāla* (ii, 280, lines 2, 4-6): *ādjurr* "bricks", *tābal* "condiment", *djamād* "mineral", *al-balbāl* "the great disturbance", *djummāʿ* "reunion of people of all kinds". One says: *raʾaytu Zaydā*, but *raʾaytu ʿAbdā* ("I saw Zayd ... ʿAbd") (ii, 282, lines 6-7). Chapter 480 of the same author mentions, rightly, the *ḥurūf* that inhibit *imāla*. This kind of inhibition may be found, whether or not the *imāla* is conditioned, but Sībawayhi here considers it from the point of view of the conditioning indicated.

These *ḥurūf* are the seven *mustaʿliya*: the four emphatics, the velars *gh* and *kh* and *ḳāf*, whether they are the first, second or third consonants of the root, for example, as first: *ṣāʿid* "going up", *ghāʾib* "absent", *ḳāʿid* "sitting"; as second: *ʿāṭis* "sneezing", *nāḳid* "criticizing (a written work)", *nākhil* "sieving"; as third: *nāhiḍ* "rising", *nāfikh* "blowing", *nāfiḳ* "selling well (merchandise)", *maʿālīḳ* "straps", *maḳārīḍ* "scissors". An *i*, however, in the syllable preceding that which contains the long *ā* (provided that an emphatic does not open the latter syllable) restores the operation of the *imāla*, thus: *ṣiʿāb* pl. of *ṣaʿb* "difficult", *ḳibāb* "domes", *khibāth* pl. of *khabīth* "bad", *miṣbāḥ* "lamp, torch".

All this clearly points to a conditioned *imāla*, and there are other clear examples in chapter 478 of the *Kitāb* (ii, 283, lines 6-7, 10, 12-3); there are, however, also a number of cases that are less clear: *imāla* of: *ramā* (radicals *r m y*) "he threw", *daʿā* (r. *d ʿ w*, passive *duʿiya*) "he called", *khāfa* (r. *kh w f*, 1st pers. *khiftu*) "he feared", *nāb* (pl. *niyāb*) "canine (tooth)", *ḥublā* (dual *ḥublayāni*) "pregnant (woman)". Arab grammarians adduce the influence of morphological associations [see the data given in the parentheses] where they find the *kasra* or the *yāʾ* that they require. They can find no arguments, however, in the cases of *Ḥadjdjādj* (proper name), *bāb* "door", *māl* "money, wealth".

In the writer's opinion, in addition to a conditioned *imāla*, which is widely used, there exists an unconditioned *imāla*, which Arab grammarians have not recognized as such and have forced into the framework of the first, without, however, leaving us the means to discriminate precisely between the two. Furthermore, they have not answered all the questions; for example, what was the situation with *alif mamdūda* from this point of view? At all events, we cannot follow J. Cantineau when he states (*Cours*. 98): "*Imāla* must be considered as an *unconditioned phenomenon*, which affects every long *ā* (however with a possible distinction between an internal *ā* and a final *ā*), provided that no preservative action is brought to bear on them".

Imāla was not general among the Arabs; it appears to have been the practice of the Easterners: Tamīm and others, as opposed to the Ḥidjāzis (cf. Sībawayhi, ii, 280, line 1, 281, line 5, 283, line 16). It is, however, received in Ḳurʾānic recitation (see al-Dānī, *Taysīr*, 46-68, *Bibl. Isl.* 2). It was a simple realization of the phoneme *ā*. In modern dialects it comes to acquire a distinctive value; thus at Kfarʿabîda (M. T. Feghali, *Le parler de Kfarʿabîda (Liban-Syrie)*, 96): *rājeʿ* "returning" and *rājeʿ* "begin again", *jāre* "flowing" and *jāre* "my neighbour".

Remarks: (a) Sībawayhi (ii, 284, lines 1-5) stresses the diversity that is to be found in the practice of *imāla*, and it is probable that he does not produce all the facts concerning this phenomenon. When one has experience of modern dialects with *imāla*, as for example the Lebanese vernaculars, one can only agree with Sībawayhi; each region has its own system, and indeed the system may differ from village to village. That of Kfarʿabîda (94-5), for example, is not free from "exceptions" (see 95, 3°).

(b) The case of *ṭāba* "he was good" (Sībawayhi, ii, 281, line 13), *ṣāra* "he became" (*ibid.*, line 14) is separate. Either it is a matter of non-velarized emphatics, of a type compatible with *imāla*, or one should read: *ṭēba, ṣēra*, forms comparable with those of Ethiopic, such as *kēda* "he walked", *shē*

without wishing to go back to an ancient phoneme *ē* (see H. Fleisch, *Traité philol. ar.*, i, § 7 j-k).

Bibliography: in the text; in addition: chapters 477-82 of Sībawayhi (Paris, ii, 279-94- Cairo, ii, 259-81) are essential; the case of *r* is dealt with in chapters 481-2. Arab grammarians reworked the data; see: the "six causes" of Ibn al-Sarrādj, *Mūzadj*, Beirut 1385/1965, 139-40; verses 899-913 of the *Alfiyya* of Ibn Mālik (*Sharḥ* of Ibn ʿAḳīl, ii, 407-13, 6th ed. by Muḥyī al-Dīn ʿAbd al-Ḥamīd); §§ 626-39 of the *Mufaṣṣal* of Zamakhsharī (2nd ed. J. P. Broch) (*Sharḥ* of Ibn Yaʿīsh, 1252-68, ed. G. Jahn); Raḍī al-Dīn al-Astarābādhī, *Sharḥ al-Shāfiya*, iii, Cairo 1358/1939, 4-30. On the Arab grammarians: M. T. Grünert, *Die Imāla, der Umlaut im Arabischen* (in *SB Ak. Wien*, phil.-hist. Cl., lxxxi, 447-542); J. Cantineau, *Cours de phonétique arabe* (reissued, *Memorial J. C.*, Paris 1960) deals (96-100) with the *imāla* in Classical Arabic and the situation in the modern dialects, and gives the modern bibliography (97).

IMĀM AL-**ḤARAMAYN** [see AL-DJUWAYNĪ].

IMĀM AL-**HUDĀ** [see ABU 'L-LAYTH AL-SAMARḲANDĪ].

IMĀM-BĀRĀ, literally "enclosure of the Imāms", is a term used in India for the buildings where the Shīʿis assemble during Muḥarram and recite elegies on the martyrdom of Ḥasan and Ḥusayn and in which the *taʿziyas* [*q.v.*] are stored. The *Imām-bārā* is an Indian institution, whose beginnings may be traced to the 18th century, when many of the Shīʿī institutions and practices took their ritualistic form. Ṣafdar Djang (1708-54) constructed a building in Delhi for the purpose of the Muḥarram rituals; it was not known as *Imām-bārā*, but may well be considered its forerunner. An almost similar building constructed by his grandson Āṣaf al-Dawla in Lucknow, however, became known as "Imām-bārā-i Āṣafī". After that it became a practice with the Nawwābs of Awadh to build *Imām-bārās*, which came to be used also as the final resting-places of the heads of the families to which they belonged. The *Imām-bārā* of Ḥusaynabād built by Muḥammad ʿAlī Shāh (1837-47) shows the influence of European architecture. According to Djaʿfar Sharīf, the *ʿĀshur-khāna* of Southern India is replaced in the north by the *Imām-bārā*.

(K. A. NIZAMI)

IMĀM SHĀH, IMĀM AL-DĪN ʿABD AL-RAḤĪM B. ḤASAN (b. 856/1452; d. 919/1513), was a saint (*pīr*) of an Ismāʿīlī sect known as Imāmshāhīs, and better known as *sat-panthīs* (followers of truth). *Sat-panth* (the true path) was a term applied originally to Eastern Ismāʿīlism in India. Later the *sat-panthīs* denied all connection with the Khodjas, although there is a great similarity in their doctrines. His tomb is at Pīrāna (near Aḥmadābād, Gujarat), where Imām Shāh lived and taught. It is greatly venerated by his followers, who are also to be found in Madhya Pradesh, near Burhānpūr, where a sizeable community still exists. Their doctrines and ritual are mostly Hindu; they believe in *karma* (incarnation) and although they confess to faith in the Ḳurʾān, they hold that their Imām is the tenth incarnation of the Hindu God, Vishnū. ʿAlī was the first of the Imāms and the possessor of the Divine Light. The Ḳurʾān was in 40 *pāras* (parts), of which only 30 are preserved. The true interpretation (*taʾwīl*) of the faith is called *alankār*. The Imāmshāhīs are generally vegetarians. Their devotional poetry, known as *gnāns*, of which there are several collections, is beautiful and touching, and fully deserves study and publication. The *gnāns* are greatly revered by the sectarians, who pay greater reverence to them than to the Ḳurʾān. The best account of the sect is by W. Ivanow, *The Sect of Imām Shāh in Gujarat*, in *JBBRAS*, xii (1936), 19-70.

(A. A. A. FYZEE)

IMĀMA, the imāmate in the meaning of "supreme leadership" of the Muslim community after the death of the Prophet. The present article will deal with the theological and judicial theory. For the institutional development see KHILĀFA.

Early development. The establishment of Abū Bakr after the death of Muḥammad as *Khalīfat Rasūl Allāh*, "Vicar of the Messenger of God", affirmed the continued unity of the Muslim community under a single leader. It favoured a preferential right to the imāmate for the early Meccan, Ḳurayshite Companions of the Prophet and implicitly denied any right on the basis of blood relationship with him. Although these principles did not remain unchallenged from the beginning, broad theoretical discussion of the imāmate was opened by the crisis of the caliphate beginning with the rebellion against ʿUthmān. At the end of the civil war, which left Muʿāwiya as *de facto* ruler, the community remained deeply divided in its beliefs concerning the rightful imāmate. The upholders of ʿUthmān as a just caliph, commonly known as the ʿUthmāniyya, repudiated the revolt and the caliphate of ʿAlī resulting from it. The ʿUthmāniyya comprised besides the partisans of Muʿāwiya the upholders of the principles of the early caliphate, *i.e.*, in particular the right of the families of the non-Hāshimite early Companions of the Prophet, now mostly living in Medina. Although criticism of ʿUthmān had been wide-spread among the latter during his caliphate, they had not looked with favour upon the succession of ʿAlī, and accepted the verdict of the arbitrators appointed at Ṣiffīn that ʿUthmān had been killed unjustly. They did not favour Muʿāwiya, since he did not belong to the early Companions, but accepted him for the sake of unity. The partisans of ʿAlī, commonly called his *shīʿa*, upheld the justice of the revolt against ʿUthmān, who in their view had lost his title to the caliphate by his unjust acts. As against the claim of Muʿāwiya to the caliphate as the avenger of the murdered ʿUthmān, they looked for leadership from the clan of Muḥammad, especially among the sons of ʿAlī, in order to re-establish the rightful imāmate. Their support of the claims of the family of the Prophet (*ahl al-bayt* [*q.v.*]) to the imāmate did not imply a repudiation of the first two caliphs Abū Bakr and ʿUmar. The belief that

ʿAlī was the divinely appointed heir of the Prophet and was endowed with supernatural powers, commonly attributed by the sources to the largely legendary figure of ʿAbd Allāh b. Sabaʾ [*q.v.*], was at most marginal. The Khāridjīs, seceders from the ranks of the partisans of ʿAlī, shared the views of the latter concerning ʿUthmān and the rising against him and upheld the initial legitimacy of the caliphate of ʿAlī. They repudiated ʿAlī from the time of his agreeing to the arbitration of his conflict with Muʿāwiya and equally repudiated Muʿāwiya as a rebel against the initially legitimate caliphate of ʿAlī.

The second civil war beginning after the death of Muʿāwiya and resulting in the definite establishment of Umayyad rule on a dynastic basis, further sharpened the fronts between these parties. The supporters of the traditions of the early caliphate, after the failure of ʿAbd Allāh b. al-Zubayr's attempt at restoring it, lost all hope. They came to idealize the period of the first three caliphs. Although they supported Umayyad rule and were opposed to revolt, they did not, in contrast to the Syrian supporters of the Umayyads, consider this rule as part of the genuine caliphate, which had ended with ʿUthmān. The violent death of al-Ḥusayn, grandson of the Prophet, at the hands of the supporters of the Umayyad regime, increased radical trends among the partisans of ʿAlī. In the movement of al-Mukhtār, the radical elements came to the forefront and broke with the conservative wing of the Shīʿa. They held that the community had gone astray by denying the divine right of ʿAlī to the succession of the Prophet and by accepting the caliphate of Abū Bakr and ʿUmar. They expected the restoration of justice on earth through the triumph of their Imām Muḥammad b. al-Ḥanafiyya, to whom they attributed the messianic role of the Mahdī. In the face of this radicalization of the Shīʿa, the movement of the Murdjiʾa, initiated by al-Ḥasan b. Muḥammad b. al-Ḥanafiyya, attempted to close the gap between the moderate Shīʿa and the ʿUthmāniyya. The early Murdjiʾa affirmed the superiority of Abū Bakr and ʿUmar over the later caliphs and deferred the case of ʿUthmān and ʿAlī and the other participants in the civil war to the judgment of God. They accepted the caliphate of the Umayyads as being decreed by God, without necessarily justifying their conduct, and were opposed to any breach of the peace of the community. The Khāridjīs, after failing to win ʿAbd Allāh b. al-Zubayr to their views, declared uncompromising war on the community at large and began to choose their own imāms. Disagreement concerning the treatment of non-Khāridjī Muslims and other matters increasingly divided their ranks.

Elaboration of the classical doctrines: Sunnism. Sunnī doctrine on the imāmate was basically determined by the aim, common to the ʿUthmāniyya and the Murdjiʾa, of defending the unity and the internal peace of the Muslim community under the historical caliphate against the threat posed by the claims of the opposition movements. This did not imply unqualified support of the record of the historical caliphate. Sunnī doctrine commonly drew a sharp distinction between the early caliphate of the Rightly Guided (*rāshidūn*) Caliphs, the Vicariate of Prophecy (*khilāfat al-nubuwwa*), and the later imāmate, which had the character of worldly kingship (*mulk*) and admittedly comprised unjust and oppressive imāms. Only the *Rāshidūn* completely fulfilled the conditions of the true imāmate. Their acts and rulings were binding *sunna*. In the controversies with the opposition parties the legitimacy of their rule and the justice of their acts were regularly defended against any criticism.

This distinction is most clearly represented in Sunnī traditionalist doctrine as it was formulated in canonical *ḥadīth* and was elaborated in the Ḥanbalī creeds and by al-Ashʿarī. In early ʿAbbāsid times traditionalist opinion in Medina, Baṣra, Baghdād, and Syria generally upheld the view of the ʿUthmāniyya restricting the caliphate of the *Rāshidūn* to the first three caliphs and rejecting the caliphate of ʿAlī. However, Kūfan traditionalist opinion firmly endorsing the inclusion of ʿAlī among the *Rāshidūn* spread rapidly. It was eventually favoured by Aḥmad b. Ḥanbal, who originally had supported the doctrine of the ʿUthmāniyya. By the 4th/10th century the caliphate of the four *Rāshidūn* became indisputable Sunnī dogma. Ḥanbalī and Ashʿarī doctrine strongly insisted that the four *Rāshidūn* ranked in excellence according to their sequence in the caliphate. This agreed with the view implied in the Ḥanbalī creeds and expressly affirmed by al-Ashʿarī, that only the most excellent (*al-afḍal*) in the Muslim community could be the rightful caliph. The imāmate of the less excellent (*al-mafḍūl*) in the view of al-Ashʿarī is worldly kingship. Though in the traditionalist view individual caliphs after the *Rāshidūn* might come close to fulfilling the ideal conditions of the caliphate, as was often affirmed for the pious Umayyad ʿUmar b. ʿAbd al-ʿAzīz, there was no expectation that the Vicariate of Prophecy could ever be restored after the passing of the thirty years which it was to last according to a famous *ḥadīth*. For the later imāmate there were only minimal conditions. The imām had to be a Muslim and a Ḳurayshite. The imāmate could become binding without any act of recognition by the Muslim community. Aḥmad b. Ḥanbal specifically affirmed the validity of the imāmate by usurpation (*ghalaba*). While the Muslim must not get involved in a civil war when there is no imām, absolute obediance and active support of the established imām, whether he be just or oppressive, pious or depraved, are incumbent upon him, except on violation of the *sharīʿa*. The imāmate could be forfeited only through apostasy or by neglecting the duty of the imām to provide for the communal prayer, as affirmed by a *ḥadīth*.

Ḥanafī and early Māturīdī doctrine was close to the traditionalist views. Abū Ḥanīfa, belonging to the Murdjiʾa, did not express a preference between ʿUthmān and ʿAlī, while ranking them below Abū Bakr and ʿUmar. This view was admitted as legitimate in some Ḥanafī creeds, but the majority upheld the hierarchical ranking according to the order of succession. According to an early source Abū Ḥanīfa also stipulated the imāmate of the "most excellent". This accords with the endorsement of the *ḥadīth* restricting the caliphate to thirty years in some Ḥanafī creeds. In contrast to the Ḥanbalī creeds, Ḥanafī creeds rarely mentioned the imāmate after the *Rāshidūn* at all. The obligation to obey the ruler was rather implied in the prohibition of drawing the sword against fellow Muslims.

A different doctrine developed in Shāfiʿism and the *kalām* school of the Kullābiyya associated with it and increasingly also influenced Ashʿarism after al-Bāḳillānī (d. 403/1013). The Shāfiʿī doctrine did not restrict the rightful imāmate to the most excellent in the community. It admitted the imāmate of the less excellent, especially if discord could be avoided

by choosing him. Al-Shāfiʿī and some prominent early Shāfiʿī scholars reportedly ranked ʿAlī in excellence above ʿUthmān (though below Abū Bakr and ʿUmar). ʿUthmān's imāmate thus was that of the "less excellent". This less rigid approach permitted the Shāfiʿīs to treat the post-*Rāshidūn* caliphate as a basically sound imāmate which could be judged by standards derived from the ideal early caliphate. A comprehensive legal system, strongly influenced by Muʿtazilī theory, was elaborated concerning the qualifications, investiture, and functions of the imām. This development reached its climax in al-Māwardī (d. 450/1058), whose work *al-Aḥkām al-Sulṭāniyya* became widely accepted as an authoritative exposition of Sunnī doctrine concerning the imāmate. The book, written at the time of the resurgence of the ʿAbbāsid Caliphate in the late Būyid period, aimed at strengthening the foundation of the contemporary caliphate in the divine law. For the first time discussing also the wazīrate and the amīrate, which had usurped much of the authority of the caliphate, it legitimized this development, while maintaining the full sovereignty of the caliph over these offices. Al-Māwardī's work was immediately imitated by the Ḥanbalī Abū Yaʿlā al-Farrāʾ (d. 458/1066), who accepted al-Māwardī's exposition, modifying it only in some points in accordance with Ḥanbalī tradition. Against al-Māwardī he reaffirmed the validity of the imāmate by usurpation and denied the forfeiture of the imāmate by immorality, injustice, or heterodoxy. Among the Māturīdī Ḥanafīs, Abu 'l-Yusr al-Bazdawī (d. 493/1099) discussed many of the Shāfiʿī doctrines, modifying them from the point of view of Ḥanafī tradition. The rise of Sunnī valuation of the post-*Rāshidūn* caliphate in this time is reflected by the endeavour of the Ḥanbalī Abū Yaʿlā and the Ashʿarī Abū Bakr al-Fūrakī (d. 478/1085-6) to prove the legitimacy of the imāmate of Muʿāwiya in addition to that of the four *Rāshidūn*.

Major points in the fully developed Sunnī doctrine were the following: The establishment of an imām is permanently obligatory (*wādjib*) on the community, according to the common doctrine on the basis of his functions under the revealed law, not on rational grounds. There can be only a single imām at any time. The view that two countries separated by a sea preventing mutual military aid might each have an imām was exceptional. Specifically the doctrine of the Karrāmiyya that ʿAlī and Muʿāwiya were imāms at the same time was rejected. Qualifications for the imāmate were: Ḳurayshite descent, knowledge of the law as required for the judgeship, probity (*ʿadāla*) as required for legal testimony, majority, physical fitness, capability of carrying out the political and military duties of the office. The imām may be invested either through appointment (*ʿahd*) by his predecessor or by election (*ikhtiyār*). While the common view held that Abū Bakr was elected to the caliphate, the opposite view, that he had been appointed by the Prophet, was upheld by such prominent Sunnī scholars as al-Ḥasan al-Baṣrī, Ibn Ḥazm, and Ibn Taymiyya. Any Muslim of probity, with knowledge concerning the nature of the imāmate, and discernment in choosing a proper candidate, qualified as an elector. Views concerning the number of electors or "people of loosing and binding" (*ahl al-ḥall wa l-ʿaḳd* [*q.v.*]) necessary for the election to become binding on the community varied from a single one, the common Ashʿarī doctrine, to the "generality" (*djumhūr*) of the electors, stipulated by Abū Yaʿlā. The election was not conceived as a free choice between candidates, but as a selection of the "most excellent". Though the election of the less excellent, if qualified, was binding, it was considered permissible only for proper cause. The imāmate was invalidated through loss of mental or physical fitness or loss of liberty. According to many Shāfiʿīs it was forfeited by loss of probity through immorality, injustice, or heterodoxy, but this was denied by others and by Ḥanbalī and Ḥanafī doctrine. The duties of the imām were defined as: guarding the faith against heterodoxy, enforcing law and justice between disputing parties, dispensing legal punishments (*ḥudūd*), protection of peace in the territory of Islam and its defence against external enemies, conducting the *djihād* against those resisting the supremacy of Islam, receiving the legal alms, taxes, and the fifth of the booty, distributing the revenue in accordance with the law, and the appointment of reliable and sincere men in delegating authority.

Muʿtazilism. The movement of the Muʿtazila arose in the late Umayyad age with the aim of reuniting the Muslim community on a compromise solution of the disputes among the politico-religious parties. Concerning the imāmate, Muʿtazilism, in agreement with Khāridjī doctrine, emphasized the need for a just imām and the obligation of the community to remove an unjust imām, if necessary by force. Justice in the imām implied correct belief in accordance with Muʿtazilī theology and compliance with the divine law in private life and government. Muʿtazilism was opposed, however, to the Khāridjī condemnation of ʿUthmān, ʿAlī, Ṭalḥa, al-Zubayr, and their supporters as infidels. Early Muʿtazilīs held slightly varying views concerning the conflict between ʿUthmān and the rebels against him as well as the conflict between ʿAlī and his opponents in the Battle of the Camel. While it was generally agreed that one side in these conflicts must have been in the wrong, judgment as to which side this was was commonly suspended. Even if one party was definitely judged to have been in the wrong, there was hesitation to condemn it as sinning (*fāsiḳ*). Later Muʿtazilī doctrine exculpated ʿUthmān and ʿAlī from any fault and condemned the rebels against ʿUthmān. It held that ʿĀʾisha, Ṭalḥa, and al-Zubayr had repented of their rebellion against the rightful imām before their death and condemned their unrepentant followers. Muʿāwiya was nearly unanimously condemned as *fāsiḳ* or even as an infidel. Although the Umayyad caliphate was generally viewed with abhorrence, it was not rejected on principle. The Umayyads ʿUmar b. ʿAbd al-ʿAzīz and Yazīd b. al-Walīd were commonly considered as rightful imāms. The attitude to the early ʿAbbāsid caliphs was divided. While some viewed them favourably, others supported ʿAlid revolts. Later Muʿtazilī doctrine became increasingly pro-ʿAlid. The imāmate of ʿAlī's son al-Ḥasan was common doctrine after Abū ʿAlī al-Djubbāʾī (d. 303/915-6). The Ḳāḍī ʿAbd al-Djabbār (d. 415/1025) in his *K. al-Mughnī* argues for the imāmate of the ʿAlids al-Ḥasan, al-Ḥusayn, Zayd b. ʿAlī, Muḥammad b. ʿAbd Allāh (al-Nafs al-Zakiyya), and his brother Ibrāhīm. The early Baṣran Muʿtazilīs ranked Abū Bakr in excellence highest after the Prophet and generally maintained that the rightful imāmate is restricted to the most excellent in the community. The Baghdādian school, which developed some half century after the Baṣran school, ranked ʿAlī above Abū Bakr and accordingly affirmed the legitimacy of the imāmate of the less excellent. The Baṣrans Abū ʿAlī al-Djubbāʾī and his son Abū Hāshim, chief

authorities of later Muʿtazilism, left the question of the superiority of Abū Bakr or ʿAlī open and held the imāmate of the less excellent to be permissible for proper cause. Abū ʿAbd Allāh al-Baṣrī (d. 367/977) and ʿAbd al-Dj̲abbār in his later doctrine upheld the superiority of ʿAlī.

Early Muʿtazilism, in agreement with K̲h̲āridj̲ī doctrine, generally did not restrict the imāmate to members of the Ḳurays̲h̲. While the eccentric Muʿtazilī Ḍirār b. ʿAmr held that of two otherwise equal candidates a non-Ḳurays̲h̲ite should be preferred to a Ḳurays̲h̲ite, the common opinion preferred the Ḳurays̲h̲ite in this case. Later Muʿtazilī doctrine maintained that no non-Ḳurays̲h̲ite could become imām if a qualified Ḳurays̲h̲ite was available. The establishment of an imām was considered obligatory on the community except by a group of early Muʿtazilīs inclined to asceticism, who held that the community should choose leaders for the *dj̲ihād* and officials for other necessary functions on a temporary basis so as to frustrate any ambitions for worldly power. The majority rejected the view that the establishment of an imām was obligatory on rational grounds, which was admitted by al-Dj̲āḥiẓ, Abu 'l-Ḳāsim al-Balk̲h̲ī, and Abu 'l-Ḥusayn al-Baṣrī. The common doctrine insisted that there could be only a single imām at any time. Only Abū Bakr al-Aṣamm held that because of the wide expansion of Islam it was preferable for each town to choose its own imām. In all other respects the Muʿtazilī doctrine agreed substantially with Sunnī doctrine.

S̲h̲īʿism: Zaydiyya. The Zaydiyya, supporters of the revolt of Zayd b. ʿAlī in 122/740, unlike the Imāmiyya did not recognize a hereditary line of imāms but were prepared to support any member of the *ahl al-bayt* who claimed the imāmate by "rising" (*k̲h̲urūdj̲*) against the illegitimate rulers. While some Zaydīs as late as the 4th/10th century considered all descendants of ʿAlī's father Abū Ṭālib as eligible for the imāmate, the prevalent doctrine restricted it to the descendants of al-Ḥasan and al-Ḥusayn. During the 2nd/8th century, Zaydism was doctrinally divided into two major groups, the Batriyya and the Dj̲ārūdiyya. The Batriyya, following the traditions of the moderate wing of the Kūfan S̲h̲īʿa, upheld the imāmate of Abū Bakr and ʿUmar and of ʿUt̲h̲mān during the first six years of his rule on the basis that ʿAlī had pledged allegiance to them. They repudiated ʿUt̲h̲mān during the last six years of his rule, just as they repudiated all opponents of ʿAlī. Considering ʿAlī the most excellent of men after the Prophet they permitted the imāmate of the less excellent. The Dj̲ārūdiyya, adopting the more radical views of the Imāmiyya, rejected the imāmate of the first three caliphs and held that the Prophet had invested ʿAlī as his executor (*waṣī*) by designation (*naṣṣ*). Holding that the great majority of the Companions of the Prophet had gone astray by following Abū Bakr and ʿUmar, they, unlike the Batriyya, rejected the tradition of the law handed down by them and relied for religious knowledge on the descendants of al-Ḥasan and al-Ḥusayn as a whole, not merely those recognized as imāms. From the 3rd/9th century onwards the tendencies of the Dj̲ārūdiyya came to prevail in Zaydism.

The major points of Zaydī doctrine, as it was fully developed during the 4th/10th century in discussions with representatives of Muʿtazilī and Imāmī doctrine, were: the establishment of an imām is obligatory on the community, according to the common view because of his functions under the revealed law, not on rational grounds. The first three imāms, ʿAlī, al-Ḥasan, and al-Ḥusayn were invested by the Prophet through designation (*naṣṣ*). This designation was obscure (*k̲h̲afī, g̲h̲ayr dj̲alī*), so that its intended meaning could be discovered only by investigation. Through this doctrine the Zaydiyya, in contrast to the Imāmiyya, tended to alleviate the sin of the early community in disobeying the order of the Prophet. After al-Ḥusayn the imāmate belongs to any qualified descendant of al-Ḥasan or al-Ḥusayn who calls to his allegiance and rises against the illegitimate rulers. The imāmate becomes legally valid through the formal "call" to allegiance (*daʿwa*) and "rising" (*k̲h̲urūdj̲*), not through election (*ik̲h̲tiyār*) and contract (*ʿaḳd*). The qualifications of the imām were, aside from his descent, essentially the same as in Sunnī and Muʿtazilī doctrine, with special emphasis on knowledge in religious matters, ability to render independent judgment (*idj̲tihād*) in law, piety, moral integrity, and courage. The imāmate is forfeited by the lack of any of the qualifications, in particular by moral offences. Only the most excellent can be the rightful imām, and if a candidate excelling the imām rises and claims the imāmate, the excelled imām must surrender his position to him. This qualification of the imām was rejected by some later Zaydī authorities. The prevalent doctrine admitted only a single imām at any time. The existence of two separate Zaydī communities in the coastal areas south of the Caspian Sea and the Yaman in some instances led to a later recognition of two contemporary claimants as imāms, but the formal admission of the legitimacy of two contemporary imāms was exceptional. There must be someone qualified for the imāmate at any time. Knowledge of the imām after he has issued his call to allegiance is incumbent on every Muslim.

The list of recognized Zaydī imāms has never been absolutely fixed, though there was a consensus on many of them. The high requirements for the imāmate, in particular in respect to religious learning, excluded many ʿAlid pretenders and rulers. These could be recognized as restricted imāms (*muḥtasibūn* or *muḳtaṣida*) or „callers" (*duʿāt*), in contrast to the full imāms (*sābiḳūn*). Only late Yamanī Zaydism developed a formal doctrine concerning the *iḥtisāb* imāmate. The functions of the *muḥtasib* imām were defined as "ordering the proper and prohibiting the improper", defending the community against external aggression, and protecting the rights of the weak. He was not authorized to lead the communal prayer, to collect alms and taxes, to wage offensive war, and to carry out legal punishments.

Imāmiyya (Twelver S̲h̲īʿa). Imāmī doctrine on the imāmate in its basic conceptions was formulated in the time of Imām Dj̲aʿfar al-Ṣādiḳ (d. 148/765). It founded the imāmate on the permanent need of mankind for a divinely guided, infallible leader and authoritative teacher in religion. The imāmate was thus raised to the level of prophecy. The only difference between the messenger prophet (*rasūl*) and the imām was that the imām did not transmit a divine scripture. To ignore or disobey the divinely invested imām was infidelity equal to ignoring or disobeying the prophet. The conception that the imām must be fully immune (*maʿṣum*) from sin and error was fundamental to Imāmī thought. The imām might, however, practice dissimulation (*taḳiyya*) in case of fear for his own or his followers' safety. Although the imām was entitled to political leadership as much as to religious authority, his imāmate did not depend on his actual rule or any attempt to gain it. Following the traditions of the radical wing

of the early Shīʿa, the Imāmiyya repudiated the caliphates of Abū Bakr, ʿUmar, and ʿUthmān and maintained that the Prophet had appointed ʿAlī as his *waṣī* by designation. The great majority of the Companions had apostatized by ignoring this designation. The imāmate after al-Ḥasan and al-Ḥusayn was to be handed down among the descendants of the latter by designation from father to son until the Mahdī. The succession of the seven year old Muḥammad al-Djawād in 203/818 raised the question whether minority suspended or restricted the imāmate, and how the imām received his perfect knowledge. The majority asserted that a minor could fulfil all the functions of the imāmate, and that he was endowed by God with integral knowledge in religious matters. The crisis caused by the death of the eleventh imām without an apparent son was resolved by the affirmation of the existence of a son and the doctrine of the absence, *ghayba* [*q.v.*]. The twelfth imām, though in concealment, continued to live on earth and could fulfil the essential functions of the imāmate. He was identified with the Mahdī, whose return before the end of the world is expected.

Authoritative Imāmī *ḥadīth* embodies these beliefs concerning the imāms: The world cannot exist for a moment without a *ḥudjdja* (proof, guarantor = imām) of God. There can be only a single imām at any time, though there may be a silent (*ṣāmit*) imām (his successor) besides him. The imāms are referred to in many passages of the Ḳurʾān by such terms as the "light of God", His "witnesses" (*shuhadāʾ*) among mankind, His "signs" (*ʿalāmāt*), those "firm" (*rāsikhūn*) in knowledge etc. They are the "vicegerents" (*khulafāʾ*) of God on earth, the "gates" (*abwāb*) through which he is approached, the heirs of the knowledge of the Prophet. The imāms are in possession of all revealed books. Only they have perfect knowledge of the Ḳurʾān in both its exoteric (*ẓāhir*) and esoteric (*bāṭin*) meaning. They have been given the "greatest name of God" (*ism Allāh al-aʿẓam*). They have inherited the arms of the Prophet and the books *Ṣaḥīfa*, *Djafr*, *Djāmiʿa*, and the *Muṣḥaf* of Fāṭima containing secret knowledge. The knowledge of every imām is identical with the knowledge of the Prophet. Though the imāms are not endowed with a native faculty of knowing the hidden (*ghayb*), they know "what has been and what will be". They have perfect knowledge of all crafts and all languages. God gives them knowledge of anything they desire to know. The imām receives the perfect knowledge of his predecessor in the last moment of the latter's life. In the night of *al-ḳadr* of every year the imām receives the judgments of God concerning every event in the following year. The imām is spoken to (*muḥaddath*) and informed (*mufahham*) by an angel, but unlike the *rasūl* does not see him. The imām is endowed with the holy spirit (*rūḥ al-ḳuds*).

Imāmī theologians defended the following positions in the *kalām* discussions of the imāmate: The imāmate is obligatory on rational grounds. Establishment of an imām is incumbent upon God by virtue of his benevolence (*luṭf*), not upon mankind. The imām must be designated by God through the Prophet or another imām. ʿAlī has been named by the Prophet as the imām after him by clear designation (*naṣṣ djalī*). The imām must be immune from sin and error. He must be the most excellent of all the people in his time. The imām is capable of performing miracles. He can intercede with God for the sinners among his followers.

Ismāʿīliyya. Ismāʿīlism, branching off from Imāmism after the death of Imām Djaʿfar, retained the fundamental conceptions of Imāmī doctrine concerning the permanent need for a sinless and infallible imām as the political and religious leader of mankind. On these conceptions inherited from the Imāmiyya early Ismāʿīlism superimposed a cyclical view of history [see ISMĀʿĪLIYYA]. In each prophetic era seven imāms followed the speaker-prophet (*nāṭiḳ*) and his *waṣī* or *asās*. The seventh imām in this heptade would rise to the position of speaker-prophet of the next era. In the sixth era, which was inaugurated by Muḥammad as the speaker-prophet and ʿAlī as the *asās*, the seventh imām was Muḥammad b. Ismāʿīl b. Djaʿfar. Muḥammad b. Ismāʿīl in pre-Fāṭimid Ismāʿīlism was expected to return after his disappearance as the seventh speaker-prophet, who was identified with the *Ḳāʾim* or Mahdī opening the eschatological seventh era. This belief was modified in Fāṭimid doctrine by the recognition of the Fāṭimids as imāms of the sixth era, removing the eschatological expectations further and further into the future. The efforts to explain the continuity of the imāmate between the disappearance of Muḥammad b. Ismāʿīl and the rise of the Fāṭimids, commonly referred to as the time of "occultation" (*satr*), the eschatological significance of the seventh imām, and irregularities in the succession of the Fāṭimid caliphs led to constant readjustments of the doctrine, which cannot be followed here in detail. Deviations from the strictly linear descendance in the succession to the imāmate were often explained in terms of a "depositary" (*mustawdaʿ*) imāmate which had to be returned to the line of "permanent" (*mustaḳarr*) imāms. Thus al-Ḥasan was sometimes considered as a depository imām, since the imāmate was carried on among the descendants of al-Ḥusayn, the *mustaḳarr* imām. This theory served, however, rather as an explanation of the irregularities of the succession in the past than as a pattern for the future.

In the esoteric (*bāṭin*) Ismāʿīlī doctrine, the imām represents a grade (*ḥadd*) in the religious hierarchy below the *nāṭiḳ* and the *asās* and above the *ḥudjdja*. The imām in his time assumes the function of the *nāṭiḳ* in expounding and preserving the exoteric (*ẓāhir*) meaning of the revealed law, while his *ḥudjdja* succeeds to the role of the *asās* in revealing its esoteric interpretation (*taʾwīl*). The imām as the head of the hierarchy in his time also is the mediator between the believer and the principles of the spiritual world.

Khāridjism. Khāridjī doctrine most radically tied the legitimacy of the imām to his justice (*ʿadl*). By any infraction of the divine law the imām loses his legitimacy and must be removed, if necessary by force. The unjust imām and his supporters are considered infidels, unless they repent. Thus both ʿUthmān and ʿAlī became infidels, although their imāmate had initially been legitimate. Any Muslim who does not dissociate himself (*tabarraʾ*) from them, shares their state of infidelity. Similarly, any Muslim who does not declare his solidarity (*tawallā*) with the just imāms, like Abū Bakr and ʿUmar, is an infidel.

The establishment of an imām is obligatory according to the common Khāridjī doctrine. Only the Nadjadāt reportedly held that the Muslims were not obliged to establish an imām if they acted justly among themselves. The imām is to be elected. His imāmate is legally contracted through the pledge of allegiance of two just Muslims. Only the most excellent in the community is entitled to the imāmate. At times Khāridjīs imposed the condition (*sharṭ*) on their imām that he must surrender his position if

a more excellent candidate appears. The imposition of conditions on the imām was, however, considered illegal by others. Khāridjī doctrine unanimously rejected the prerogative of the Ḳuraysh to the imāmate and held any qualified Muslim, even of slave origin, to be eligible. Exceptional was the view of the followers of Shabīb b. Yazīd in the time of al-Ḥadjdjādj, who considered women eligible for the imāmate. There can be only a single imām at any time according to the prevalent view, though some splinter groups admitted the legitimacy of more than one contemporary imām. The other qualifications and functions of the imām are substantially the same as in Sunnism. Special emphasis is placed on his moral austerity as well as his duty of "commanding the proper and prohibiting the improper" and of leading the *djihād* against the non-Khāridjī Muslims.

Of the many Khāridjite sects the Ibāḍiyya [*q.v.*] is the only one whose doctrine can be studied through its own writings. A systematical investigation has not yet been undertaken. The Ibāḍiyya, while agreeing with the general Khāridjī doctrine, recognized different types of imāms corresponding to the four states or "ways" (*masālik*) in which the community of true believers could face its enemies: the state of manifestation (*ẓuhūr*), when the community was strong enough to overcome the enemy; the state of defence (*difāʿ*), when it could merely resist a powerful enemy; the state of self-sacrifice (*shirāʾ*), when a small group of believers chose to rise against the enemy seeking martyrdom; and the state of concealment (*kitmān*), when the believers were forced to live under the rule of the enemy and to practise dissimulation. Only the imām of the state of manifestation can exercise all the functions of the imāmate, such as the execution of legal punishments, the collection of the tithe and the *djizya* of the non-Muslims, and the distribution of booty. Against the doctrine of the splinter group Khalafiyya, the common doctrine affirms that there cannot be more than one imām belonging to the same "way" at any time.

Later development. Sunnī thought on the imāmate, having been closely tied to the contemporary ʿAbbāsid caliphate in the time of al-Māwardī, continued to react to its changing fortunes. Already al-Ghazālī (d. 505/1111), under the impression of the powerful Saldjūḳ sultanate, was prepared to view the caliph as merely the representative head of Islam, established by the pledge of allegiance of the effective ruler, whose rule in turn is legitimized by his formal recognition on the part of the caliph. This recognition of the legitimacy of the actual political institutions was motivated, as al-Ghazālī noted, by the overriding necessity of preserving the legality of the acts of governors and judges throughout the empire. The preservation of this legality in the execution of the *sharīʿa* became a fundamental concern after the fall of the caliphate of Baghdād. In the east, which for decades fell under the rule of non-Muslims, al-Taftāzānī (d. 791/1389) affirmed that the legality of judicial acts could not depend on the presence of a qualified Ḳurayshite imām at a time when it was impossible to establish such an imām because of the predominance of error and tyranny. The ʿAbbāsid shadow caliphate established in Cairo by the Mamlūk sultanate was practically ignored even by Sunnī jurists writing under the Mamlūk regime like Ibn Taymiyya (d. 728/1328) and Ibn Djamāʿa (d. 732/1332). Considering the actual exercise of power as essential to the imāmate, they implicitly vested its functions with the actual ruler. In contrast to al-Ghazālī, they no longer tied his legitimacy to a nominal recognition by the caliph. The *ḥadīth* restricting the caliphate to thirty years, after which worldly kingship would take its place, was commonly quoted again and dominated Sunnī thought. Since kingship belonged to the holder of power irrespective of qualifications, the qualifications of the imām stipulated in the classical doctrine could be ignored or expressly waived by the doctrine of necessity (*ḍarūra*). The classical doctrine was nowhere revised, but rather treated as being in abeyance. Following al-Djuwaynī and al-Ghazālī, later Sunnī scholars often emphasized that the imāmate properly belonged to the derived legal matters (*furūʿ*), not to the fundamentals of religion (*uṣūl al-dīn*), even though traditionally it was discussed in the *uṣūl* works rather than the expositions of the law. This consideration, originally meant to counter the Shīʿī view placing the imāmate at the core of religion, now served to mitigate the impact of the realization that the imāmate in fact no longer existed. Late Sunnī creeds commonly did not refer to the imāmate at all or mentioned only the caliphate of the *Rāshidūn*.

The modernist Sunnī attitude toward the question of the imāmate has varied. The need for an imāmate defined by religion was sometimes completely denied, as by the tract on the caliphate endorsed by the Turkish Grand National Assembly in support of the abolition of the Ottoman sultanate in 1922 and by the Egyptian ʿAlī ʿAbd al-Rāziḳ in his treatise *al-Islām wa-Uṣūl al-Ḥukm* (1925). Others have advocated the restoration of a universal imāmate modelled upon the ideal caliphate of the *Rāshidūn*. Most notable were the detailed proposals of the Syrian Rashīd Riḍā [*q.v.*] set forth in his book *al-Khilāfa aw al-Imāma al-ʿUẓmā* (1923). Basic in modernist thinking on the imāmate and Islamic government is the emphasis on government by consultation (*shūrā* [*q.v.*]) and on election as the sole way of establishing the imām. These principles are viewed as the traits which distinguished the righteous caliphate of the *Rāshidūn* from the despotism of the later caliphate.

Imāmism fully retained its classical concepts of the imāmate in later expositions of the creed. Beginning with the 7th/13th century Imāmī esoteric doctrine was greatly elaborated, partially under Ṣūfī and Ismāʿīlī influence. The eternal reality of the imāmate, now commonly termed *walāya* (quality of a *walī*, "friend of God"), was defined as the esoteric aspect of prophecy. The imām thus was viewed as the initiator into mystical truths by virtue of the theophanic quality of his essential nature as well as by his teaching as expressed in the transmitted logia of the imāms.

Ismāʿīlism survived the Fāṭimid caliphate mainly in two branches, which developed substantially different esoteric thought. Ṭayyibī Ismāʿīlism recognized al-Ṭayyib, the infant son of the Fāṭimid al-Āmir (d. 524/1130), as imām and denied his death. Ṭayyibī doctrine affirms that the Imām al-Ṭayyib, though in concealment (*satr*), is in touch with his community and specifically rejects the Imāmī notion of the *ghayba* of the imām. The concealed imām is not identified with the eschatological *Ḳāʾim*. In its esoteric doctrine Ṭayyibī Ismāʿīlism discusses in particular the cosmological nature and role of the imām. The divine nature (*lāhūt*) of the imām, as distinct from his human nature (*nāsūt*), is viewed as a temple of light (*haykal nūrānī*). After the passing (*naḳla*) of the imām the light temple,

in which the souls of his followers are gathered, rises to the horizon of the Tenth Intellect, the demiurge, and takes his place.

Nizārī Ismāʿīlism, which had branched off from Fāṭimid Ismāʿīlism after the Fāṭimid al-Mustanṣir (d. 487/1094) by recognizing his son Nizār as imām, has continued to recognize a line of present imāms. In the elaboration of the doctrine of the Resurrection (*ḳiyāma*), proclaimed in 559/1164 [see ISMĀʿĪLIYYA], the imām, revealer of the esoteric truths, came to be ranked above the *nāṭiḳ*, enunciator of the law. The imām in his eternal essence was defined as a manifestation (*maẓhar*) of the Word (*kalima*) or Command (*amr*) of God, cause of the spiritual world. The believer attains his spiritual birth, or resurrection, through the recognition of the essence of the imām.

ʿIMĀMA [see LIBĀS].

IMĀMIYYA [see IMĀMA, ITHNĀ ʿASHARIYYA].

IMĀMZĀDA is used to designate both the descendant of a Shīʿī *imām* and the shrine of such a person (with which this article is mainly concerned). The *imāmzādagān* are thus sayyids [*q.v.*], but all sayyids are not accorded the title of *imāmzāda*. In common usage it is given to the sons and grandsons of the *imāms*, but excluding those who themselves became *imāms*, and also to those of their descendants distinguished by special sanctity or by suffering martyrdom. It is not normally accorded to the female descendants of the *imāms*. The lives of many of the *imāmzādagān* are recorded in biographical and hagiographical works; the details of the lives of many others are obscure, and there is sometimes doubt over the actual descent of some of those who are revered and whose tombs are visited by pilgrims.

The first movement of *imāmzādagān* in any number into Persia was probably to Ḳumm. The *Taʾrīkh-i Ḳumm* of Ḥasan b. Muḥammad al-Ḳummī mentions the coming of various descendants of the *imāms* Ḥasan, Ḥusayn, Mūsā b. Djaʿfar, and others to Ḳumm. He also states that some of them settled in Āba and Kāshān (ed. Sayyid Djalāl al-Dīn Tihrānī, Tehran 1934, 191 ff.). After Maʾmūn's declaration of the Imām Riḍā as his *walī ʿahd*, many of the *imāmzādagān* came to Persia. On the death of the Imām Riḍā, they were dispersed. Although many of them were buried within the precincts of the shrines of the *imāms*, notably at Mashhad and Nadjaf, the tombs of others and the tombs of their descendants, or what are believed to be their tombs, are to be found through the length and breadth of Persia. Many of these have become centres of pilgrimage. From early times it was common for both Sunnīs and Shīʿīs to visit the tombs of holy men, including those of the *imāmzādagān*. Muḥammad Bāḳir Madjlisī states that the custom was sanctioned by the learned doctors of the faith although it was doubtful if traditions from the *imāms* themselves could be cited as giving authority for pilgrimages to the tombs of their children (*Tuḥfat al-zāʾirīn*, lith. Tehran 1857, 420, quoted by D. M. Donaldson in *The Shi'ite Religion*, London 1933, 258). He recommends, however, that such pilgrimages should be made. "In all cities", he writes, "there are many tombs attributed to the imamzadehs and other relations of the Imams. The graves of some of them are not marked, however, and in case of others there is nothing in particular that is known of their lives. It is advisable to visit all of them whose tombs have been identified. Honour shown to them is the equivalent to honouring the imams. While no separate instructions are given for these pilgrimages, it is well that their tombs should be visited in the same manner as those of other believers. If a distinction is made in the mode of addressing them let the salutation to them be the same as to the Imams, with whatever words flow to the tongue to show them honour. Any written salutations that the learned doctors have included in books are also acceptable" (*ibid.*, 423, quoted by Donaldson).

Many of the *imāmzādas* are only of local interest

and some of those which are popularly considered to be *imāmzādas* are in fact the tomb of some holy man, as for example the tomb of Shaykh Aḥmad Ghazālī in Ḳazwīn, which is known as the Imāmzāda Aḥmad (Sayyid Muḥammad ʿAlī Gulrīz, *Minūdar yā Bāb al-djinnat-i Ḳazwīn*, Tehran, 1958, 672. Cf. Ibn Karbalāʾī, *Rawḍat al-djinān wa-djannāt al-djanān*, ed. Djaʿfar Sulṭān al-Ḳarāʾī, Tehran 1965, 176, who mentions a tomb in Tabrīz wrongly described as an *imāmzāda*. Cf. also the story of how the alleged burial place of an *imāmzāda* was discovered in the *andārūn* of one of Nāṣir al-Dīn's palaces in Tehran related by Dūst ʿAlī Muʿayyir al-Mamālik in *Yād-dashthāʾī az-zindagī-i khuṣūṣī-i Nāṣir al-Dīn Shāh*, Tehran n.d., 43).

There are special *ziyārat-nāmas* for many of the *imāmzādas*. The place where the shrine first comes into the pilgrim's view is known as the *salāmgāh*. In some country districts, especially in the tribal districts of southern Persia, heaps of stones, placed there by generations of pilgrims, mark these spots. Pilgrimage to some of the *imāmzādas* is associated with a special season of the year, as for example the annual pilgrimage to the shrine of the *imāmzāda* Sulṭān ʿAlī, a descendant of the Imām Muḥammad Bāḳir, who was killed at the village of Mashhad-i Ḳālī, near Ardahāl, near Kāshān. According to tradition his body was carried in a carpet to where the shrine now stands. An annual fair is held at the shrine on the seventeenth day of autumn when the carpet, followed by a procession, is taken from the shrine and washed, with much ceremony, in the near-by stream and returned to the shrine. (ʿAbd al-Raḥīm Ḍarrābī, *Taʾrīkh-i Kāshān*, Tehran 1956, 300 ff. and A. Houtum Schindler, *Eastern Persian Irak*, London 1898, 88, note). This practice is still current. In many other shrines relics of the *imāmzāda* over whose remains the shrine has been raised are alleged to be preserved. For example at the shrine of Sayyid Djamāl al-Dīn, reputed to be a descendant of the Imām Mūsā b. Djaʿfar, near Ārūn and Nāzmakān, what is claimed to be the sword of Sayyid Djamāl al-Dīn is in the keeping of the *mutawallī*.

Miracles and special properties are attributed to many *imāmzādas*. Like mosques they became, by custom, places in which asylum or *bast* [*q.v.*] could be taken. Criminals and fugitives from justice frequently had recourse to them. Nāṣir al-Dīn Shāh [*q.v.*] made abortive attempts to limit the practice. One of the best known *imāmzādas* is that of Shāh ʿAbd al-ʿAẓīm near Tehran (see Donaldson, *op. cit.*, 260). Owing to its proximity to the Ḳādjār capital, those who were protesting against the actions of the government frequently took refuge there in the late nineteenth and early twentieth century. Djamāl al-Dīn Afghānī [*q.v.*] sought asylum there in 1891, but after some seven months his sanctuary was violated and he was seized by government troops. During the struggle which ended in the grant of the Constitution the supporters of the movement took refuge at Shāh ʿAbd al-ʿAẓīm in the spring of 1905, while in the summer of 1907 a number of *mullās* supporting the despotism retired there.

Many of the more famous *imāmzādas* have *awḳāf* for their upkeep; some others have small *awḳāf*, while the more obscure often dispose of no funds at all except what pilgrims may give. There is often a strong hereditary tendency in the office of *mutawallī* (see Mīrzā Rafīʿā, *Dastūr al-Mulūk*, ed. Muḥammad Taḳī Dānishpazhūh, in *Revue de la Faculté des Lettres*, University of Tehran, xvi, no. 1-2, 68-9 for the office of *mutawallī* of the shrines at Ardabīl and Shāh ʿAbd al-ʿAẓīm; and H. Busse, *Untersuchungen zum islamischen Kanzleiwesen*, Cairo 1959, 157-75).

Many local histories have information on *imāmzādas* situated in the regions with which they deal.

(A. K. S. LAMBTON)

ĪMĀN (A.), faith (in God), *maṣdar* of the 4th form of the root *ʾmn*. The root has the connotations of "being secure, trusting in, turning to"; whence: "good faith, sincerity" (*amana*), then "fidelity, loyalty" (*amāna*), and thus the idea of "protection granted" (*amān*). The fourth form (*āmana*) has the double meaning of "to believe, to give one's faith" and (with *bi*) "to protect, to place in safety". The root *ʾmn* is one of those most frequently found in the vocabulary of the Ḳurʾān, where *īmān* means sometimes the act and sometimes the content of faith, sometimes both together. It may be said that the Ḳurʾān continually teaches the necessity of faith and proclaims its demands.

I. Elements and conditions of the act of faith. What is "to believe"? The schools of *ʿilm al-kalām* and of *fiḳh* very soon posed this question and continually returned to it. Three principal elements concur in an act of faith: the internal conviction, the verbal expression, the performance of the prescribed works (*iʿtiḳād* [or *taṣdīḳ*] *bi ʾl-ḳalb*, *iḳrār bi ʾl-lisān* [or *ḳawl*], *ʿamal*). There follow now the main solutions, which sometimes overlap, but according to different perspectives. It should be added that each term of the definitions proposed must be considered in relation to the schools or tendencies which use it, and to their ideas.

(1) The Ashʿarī school stresses conviction or internal judgement. We find in al-Ashʿarī himself two ideas of faith: (a) that of the *credos* of the *Ibāna* (Cairo ed. 1348, 11) and of the *Maḳālāt* (ed. ʿAbd al-Ḥamīd, Cairo n.d., i, 327), which defines faith (in the Ḥanbalī tradition) as "words (*ḳawl*) and works"; (b) that of the *Lumaʿ* (ed. with Engl. tr. by R. J. McCarthy, *The Theology of al-Ashʿarī*, Beirut 1953, 75/104) which states: "faith is *taṣdīḳ* in God", *taṣdīḳ* being understood as an internal judgement of truthfulness, which gives its adherence to God. The vocabulary may vary, al-Ghazālī will speak of *ʿaḳd*, "pact", agreement of the heart, and al-Djurdjānī (*Taʿrīfāt*, ed. Flügel, Leipzig 1845, 41) prefers *iʿtiḳād*; but the school as a whole considers the "pillar", the formal constituent of faith, to be the conviction of the heart (or of the intellect, *ʿaḳl*): the verbal profession of this is, unless it is impossible, the condition required, and the "actions of the limbs" (the accomplishment of the prescribed works) inter-

vene to perfect it. When therefore the electicism of al-Ghazālī (*Iḥyā' ʿulūm al-dīn*, Cairo ed. 1325/1933, i, 103) unites the three elements to define faith as *taṣdīḳ* (or *ʿaḳd*), plus *ḳawl*, plus *ʿamal*, it cannot be said that he is diverging from Ashʿarī tradition.

(2) In the Ḥanafī-Māturīdī tendencies, the stress moves from *iʿtiḳād* to *ḳawl*, without omitting *taṣdīḳ* and joining to it the "knowledge of the heart (*maʿrifa*)". "Faith", says article 1 of the *Waṣiyyat Abī Ḥanīfa*, "is confession (*iḳrār*) by the tongue, internal conviction (*taṣdīḳ bi-'l-djanān*) and knowledge of the heart (*wa-maʿrifa bi 'l-ḳalb*)". More briefly, the *Fiḳh Akbar II* (article 18) states: "faith is *iḳrār* and *taṣdīḳ*". The profession of faith expressed in words (as it is formulated, essentially, by the "two members of the *shahāda*") thus appears here as the constituent of the act of faith: and the conviction which is given to it becomes the condition of it. In some manuscripts of the *Waṣiyya*, sometimes *taṣdīḳ* and more often *maʿrifa* are missing. It remains that an appeal to the "knowledge of the heart" is characteristic of the Ḥanafī-Māturīdī tendencies. In his *Maḳālāt al-Islāmiyyīn*, al-Ashʿarī saw in it even the first of the elements of faith according to Abū Ḥanīfa. As Wensinck points out (*The Muslim creed*, Cambridge 1932, 132), it is possible that there is here a certain continuity with the Murdji'ī definition of faith, which considered it to consist in the knowledge of God, of the Prophet and of his teaching. The *Maḳālāt* (i, 197-8) mention in this connexion Djahm b. Ṣafwān and the Djahmiyya. Al-Ashʿarī describes the Ḥanifiyya as a Murdji'ī sect (*ibid.*, 202), while recognizing that they (unlike the Djahmiyya) include in faith *iḳrār* with—and after—*maʿrifa* (*ibid.*, 203). However, the brief article of the *Fiḳh Akbar II*, mentioning only the verbal confession and internal conviction, was to be the main theme of the Māturīdī line (*e.g.*, ʿAbd al-Raḥīm Ibn ʿAlī, *Kitāb Naẓm al-farā'id*[2], Cairo n.d., 49 ff.). It appears that al-Djurdjānī, in his *Taʿrīfāt* (*loc. cit.*) agreed with this opinion.

(3) As we have seen, various Ashʿarī texts mention the "works of the limbs" (in contrast to the Murdji'īs, for whom works are only "ways", *sharā'iʿ*). They do not exclude them from faith, but do not consider them to be a formal constituent of it, nor even an obligatory condition. An earlier attitude, which was later challenged by Sunnism and in which Khāridjīs, Shīʿīs, Ḳadarīs and Muʿtazilīs joined, saw "works" as an integral part of faith, even as faith itself. By *ʿamal* (and its plural *aʿmāl*) should be understood the "pillars of Islam" (including the profession of faith), and with them the works prescribed by the Ḳur'ān. If the unrepentant sinner is doomed to hell, this is because, through his acts of "disobedience", he has abandoned his faith. We need not here study the differences between the Khāridjīs and the Muʿtazilīs, or the "intermediate state" accorded by the latter to the "believing sinner" [see FĀSIḲ]; we may say in short, for both of them, that "works" are not only the sign or the perfecting of faith, they *are* themselves faith and acts of faith; but, for the Khāridjīs, faith and works are interchangeable, whereas, for the Muʿtazilīs, the works are the witness which constitutes faith, itself a witness rendered to God. Thenceforward "faith (*īmān*) and religion (*dīn*) are one single and identical thing", according to the *ḳāḍī* ʿAbd al-Djabbār (*Sharḥ al-uṣūl al-khamsa*, ed. ʿAbd al-Karīm ʿUthmān, Cairo 1384/1965, 808). Al-Djubbā'ī and his son Abū Hāshim defined faith only as the fulfilling of the "prescribed" obediences (*ṭāʿāt*); but according to Abu 'l-Hudhayl al-ʿAllāf, who was followed in this by ʿAbd al-Djabbār, the performance of supererogatory works (*nawāfil*) also formed part of faith (*op. cit.*, 707-8). Deliberately to omit the performance of a prescribed duty is to cease to bear witness to the faith; whereas deliberately to fail to fulfil a secondary commandment is (merely) to tarnish the purity of the witness.

(4) The Ḥanbalī line insists on faith. It is vehemently opposed to the Murdji'īs; and, without making "works" the only pillar of the act of faith, it gives them a place in its definitions. According to Ibn Ḥanbal (*ʿAḳīda*, i, 24), "faith consists of words, works, the right intention (*niyya*) and attachment to the *Sunna*". And according to Ibn Baṭṭa, "To believe [in the message of the Prophet] is to state it with the tongue, to adhere to it (*taṣdīḳ*) with the heart (*djanān*), and to fulfil the pillars of Islam" (cf. H. Laoust, *La profession de foi d'Ibn Baṭṭa*, text and Fr. tr., Damascus 1958, 47/78). Thus *taṣdīḳ* is here less "judgement of veracity" than the synonym, to a certain extent, of *niyya*, the "right intention". Al-Kālabādhī turned this Ḥanbalī list into the "doctrine of the Ṣūfīs": "faith is word (*ḳawl*), act (*ʿamal*) and right intention (*niyya*)" (*Kitāb al-Taʿarruf*, ed. Arberry, Cairo 1352/1933, 51; Eng. tr., Cambridge 1935, 67). However, many Ḥanbalī texts (among them *ʿAḳīda II* and *ʿAḳīda III*) prefer to mention only words and works, *ḳawl* and *ʿamal*. We find again the same terms as those of the *credos* of al-Ashʿarī (*Ibāna* and *Maḳālāt*); and it is thus also that the Wahhābī *credo* defined faith (cf. Fr. tr. of H. Laoust, *apud Doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad b. Taimīya*, Cairo 1939, 623). Thus the emphasis is on visible and audible witness. But the witness is valid before God only when it is rooted in the heart. This is the import of the *Kitāb al-Īmān* of Ibn Taymiyya (Cairo ed. 1325). The *Kitāb al-Furḳān* repeats the main argument of it (*apud Madjmūʿat al-rasā'il al-kubrā*, Cairo 1328, i, 28). Faith must not only be expressed by words and by "the works of the limbs", but it should arouse in the heart of the believer the virtues of the fear of God (*khawf*), of submission to God (*tawakkul*), of humility (*dhill*), and of patient endurance (*ṣabr*). H. Laoust is right in saying, in his summary of these theses, that "la foi, dans la doctrine d'Ibn Taymiyya, est totalitaire" (*op. cit.*, 470).

(5) It is not impossible that Ibn Taymiyya accepted certain influences of the Shīʿī thought to which in fact he was opposed: but he separated them from their gnostic tendencies, and re-situated them in a Sunnī context. If we refer for example to the moderate Ismāʿīlism of the Ikhwān al-Ṣafā' (*Rasā'il Ikhwān al-Ṣafā'*, Cairo 1347/1928, iv, 128-129) we find again the distinction between external (*ẓāhir*) faith and internal (*bāṭin*) faith. The first is verbal affirmation; the second, which is the true faith, is defined as the innermost thoughts of the heart brought to bear, with experienced certainty, upon the truths professed by the tongue. Thus it is no longer a case of *iʿtiḳād*, firm adherence, or of *taṣdīḳ*, judgement of veracity, but of the "idea" of intellectual conception (*iḍmār*) which "realizes" the certainty (*yaḳīn*) of the object of faith (cf. the *yaḳīn* preached by al-Ghazālī, who goes so far as to call "the reality of faith" an experienced taste of internal evidence). The following chapters of the Ikhwān al-Ṣafā' combine with this "certainty" the religious sentiments of *tawakkul*, *ikhlāṣ*, *ṣabr*, etc. (*op. cit.*, iv,

129 ff.), according to a procedure which, though starting from different basic ideas, is not without an analogy with the interiorization sought by Ibn Taymiyya.

II. The content of faith. It was against the Murdji'is and the Djahmis that the Ḥanbali school had insisted on a faith which is expressed: thus affirming that faith is not only knowledge (*maʿrifa*), but must be made alive by the intention (*niyya*) or the adherence (*taṣdīḳ*) of the heart, and render witness by words and the fulfilment of the prescribed works. Certainly knowledge, understood as the object of faith, is not ignored, but it is not sufficient; knowledge alone, even if experienced, does not constitute faith, but faith implies a certain knowledge: the distinction is established between the act of faith and its content. "Faith in God", says Ibn Baṭṭa (cf. H. Laoust, *op. cit.*, 47/77-8), "is to give one's adherence to all that God has said, to all that He has ordered, to all the duties which He has prescribed, to all the prohibitions which He has laid down, to all which He instructed His prophets to transmit, to all that He has revealed in His books". It may be said more briefly that the content of faith is the Ḳur'ān itself, summed up in the "two limbs of the *shahāda*": the Unity of God and the mission of Muḥammad, the Prophet of God.

The manuals often distinguish between "the necessary beliefs", and those which a man may ignore without ceasing to be a Muslim. It is readily stated that the "essential beliefs" are listed in the famous verse of the Ḳur'ān (II, 285, tr. Arberry): "The Messenger believes in what was sent down to him from his Lord, and the believers; each one believes in God and His angels, and in His books and His Messengers" (and "in the Last Day", LX, 6). A no less famous *ḥadīth* repeats: "Faith is that thou shouldst believe in God, in his angels, in the future life, in the prophets, in the resurrection" (cf. the *ḥadīth* known as that "of Gabriel", al-Bukhārī, *Īmān*, 37). Another, often quoted, adds: "and that thou shouldst believe in the divine Decree for good and evil, the sweet and the bitter"; and a third: "The Prophet said: man has not faith unless he believes in four things: unless he bears witness that there is no divinity but God; that I am the messenger of God charged to teach the truth; unless he believes in the resurrection after death; and believes in the divine decree for good and evil, for the sweet and the bitter".

The precise list of the essential beliefs varies somewhat according to the schools, and sometimes the authors. It always refers however, in essentials, to the Ḳur'ānic verse and the three *ḥadīths* quoted above.

It should also be noted that the essential content of the Shīʿī conception of faith remains close to that of the Sunni concept. There are added to it some points of doctrine peculiar to Shīʿism, and, especially in Ismāʿīlism, an interpretation of the nature of angels and of prophecy conforming to a emanatist and monist view of the order of the world (cf. *Rasā'il Ikhwān al-Ṣafā'*, iv, 129).

III. The value of faith. There should be mentioned three problems.

(1) *Faith and freedom*: "Let whosoever will believe, and let whosoever will disbelieve" (Ḳur'ān, XVIII, 29). How should this verse be understood? The degree of freedom recognized in the act of faith is linked with the problem of the freedom of human action; the assessment of it thus varies according to the schools. The Muʿtazilis consider the act of faith to be "created" by man by virtue of a power created in him by God; the Ashʿaris consider it to be directly created by God within the human heart, thanks to that *tawfīḳ* which is itself "the creation in man of the power to obey" (al-Taftāzānī, *Maḳāṣid*, Instanbul n.d., 118). This definition, although given by al-Taftāzānī, is more Ashʿari than Māturīdī. Indeed, in general, the Māturīdī Ḥanafis consider the root (*aṣl*) of every human act to be created by God, whereas its qualification arises from the judgement of man. Applied to faith, this attempt at conciliation is aimed at reconciling the ideas both of God's creation of actions and man's freewill as recognized by the Ḳur'ān, XVIII, 29.

(2) *Faith and salvation*: All the schools state that faith ensures salvation. Their divergencies on the conditions of salvation arise from their divergencies concerning the formal constituents of the act of faith: for the Ashʿaris it is centred on internal *taṣdīḳ*, for the Māturīdi-Ḥanafis on the expressed profession of faith and the adherence of the heart, for the Muʿtazilis on the performance of the "prescribed duties", for the Ḥanbalis and the Wahhābis on the profession of faith and the performance of the basic duties. If a common denominator is sought for all these various opinions, it might be said *īmān*, summed up in *shahāda*, is the witness made to God, the affirmation that He is Lord, according to the terms of the "pact", of the *mīthāḳ* of pre-eternity: "'Am I not your Lord?' ... 'Yes, we testify'" (Ḳur'ān, VII, 172). In this way agreement can be reached on the well-known *ḥadīths*: "No one shall enter hell who has an atom of faith in his heart" (in the *Ṣaḥīḥ* of Muslim) and again: "Hell will not welcome anyone who has in his heart an atom of faith" (second part of a *ḥadīth* of al-Bukhārī, 81, 51). But the interpretations of these traditional texts diverged in their turn. For the person who regards the performance of the prescribed works as an integral part of faith, the sinner guilty of grave acts of disobedience is no longer truly a believer. For the person who regards works as merely the perfection of faith, the believing sinner remains a believer; he may be punished for a time in hell, but in the end he will be one of the "guests of paradise". The first opinion is that of the Khāridjis and, with the nuance of the "intermediate state", of the Muʿtazilis. The second opinion is professed, generally speaking, by the Sunnis. An extra point: the Māturīdis consider that the believing sinner will certainly undergo temporary punishment, while the Ashʿaris consider that he may be pardoned immediately and in full.

(3) "*Uncreated faith*": The insistence of tradition on "an atom of faith" leads us to the problem of "uncreated faith". The schools which put the emphasis on *iʿtiḳād* or *taṣdīḳ* in general make this internal adherence an immutable nucleus, the created response to the "uncreated faith" of God. This may seem a rather surprising idea. However, the Ashʿari authors insist on it. They regard the "uncreated faith" of God as the attestation which He gives to Himself: "Verily I am God; there is no god but I" (Ḳur'ān, XX, 14). And it is thus that, in the list of the "99 most beautiful names" [see AL-ASMĀ' AL-ḤUSNĀ], al-Īdjī and al-Djurdjānī (among others) give a *first* explanation the divine name of al-Mu'min (Ḳur'ān, LIX, 23). God is *mu'min*, says al-Īdjī (*Mawāḳif*, *apud* al-Djurdjānī, *Sharḥ al-Mawāḳif*, Cairo 1327/1907, viii, 212), inasmuch as He adheres to Himself and to His prophet", and al-Djurdjānī, in commenting on this, refers to

Ḳur'ān, XX, 14. This first meaning, which is the basis of the idea of "uncreated faith", by no means excludes the second meaning of *mu'min*: one who gives security and protection. *Allāh mu'min* means therefore: God, the source of security (and thus, of faith), the Protector. While refering to the first meaning, Fakhr al-Dīn al-Rāzī (*Lawāmi'*, Cairo 1323, 143-5) seems to prefer the second one.

Nevertheless, for the majority of the Ash'arīs, the "atom (*dharra*) of faith" which *makes* salvation, is readily considered as a created participation in the "uncreated faith" of God, placed in the heart of man at the time of the *mīthāḳ*.

IV. Questions concerning faith. Very many related questions are raised by the consideration of faith. We give here a list which is not exhaustive: (1) the "status" (*ḥukm*) of *mu'min* in this world and the next; (2) the relation between faith and unbelief (*kufr*); (3) the relation between *īmān* and *islām*; (4) may a person "hide" his faith? (the problem of *taḳiyya*); (5) should the proviso "if it pleases God" be added to the statement "I am a believer"? (6) can faith increase and decrease? (7) the degrees of faith. (Cf. L. Gardet, *Les grands problèmes de la théologie musulmane: Dieu et la destinée de l'homme*, Paris 1967, 308-90.) The first five questions will be treated in the articles MU'MIN, KUFR, ISLĀM, TAḲIYYA, IN SHĀ' ALLĀH, respectively. We discuss here only the last two.

(1) *Can faith increase and decrease?* This question appears at a very early stage in the enquiries of the schools; it is related to the definition accepted for the act of faith. The Kur'ān mentions many times the possibility of an increase of faith (thus, III, 173; XLVIII, 4; LXXIV, 31). Certain opinions, however, present it as immutable. Two examples are: (a) The Khāridjīs and the Karrāmiyya consider that faith is given as a whole and is retained or lost in its entirety, according to whether obedience to the Law is maintained or lost; it cannot vary. (b) The Murdji'is and the Māturīdī-Ḥanafīs consider faith to be immutable, but not as this is understood by the Khāridjīs. "Faith", says article 2 of the *Waṣiyyat Abī Ḥanīfa*, "cannot grow or decrease. In fact its weakening can be conceived only in connexion with an increase of unbelief (*kufr*); and its progress in connexion with a weakening of *kufr*. This would imply the possibility of being at the same time both a believer and a non-believer: and how could this be possible?" (cf. Wensinck, *op. cit.*, 125, 138). This thesis was to be defended, against the Ash'arīs, by the later Māturīdī manuals (cf. 'Abd al-Raḥīm Ibn 'Alī, *op. cit.*, 52-4, which appeals to Abū Ḥanīfa and al-Māturīdī). It implies a radical distinction between "faith" and "works". To omit an obligatory work is an act of disobedience, but it does not affect faith, either in itself or in its state of perfection.

But a very early tradition, in conforming with the Ḳur'ān, admitted possible variations of faith. Al-Bukhārī and Ibn Mādja, citing the Companions, stated this thesis in their introductions to the chapter on faith. And this was to be the opinion followed by the majority of the schools. Thus: (a) the Mu'tazilīs consider that faith *is* the witness of works: hence it can vary in itself; it increases according to the accomplishing of the prescribed works and decreases according to their omission. (b) Ibn Ḥanbal ('*Aḳīda*, i, 24) regards faith, defined by word and works, as being susceptible to growth and to decrease. Ḥanbalī thinking is unanimous on this point. Ibn Baṭṭa: "Interior adherence (*taṣdīḳ*) grows with the works and the words of goodness (*iḥsān*); it decreases with disobedience (*ma'ṣiya*). It has a point of departure and a beginning; then it is possible for it to progress and to increase endlessly" (*op. cit.*, 48/78). The same opinion is found in Ibn Taymiyya and the Wahhābīs. This thesis (we may note) was found also in the *credos* of the *Maḳālāt* and of the *Ibāna* of al-Ash'arī. (c) The whole of the Ash'arī school was to uphold this theory of the growth and decrease of faith, but at the same time stressing that it was a matter of the degree of perfection brought to it (or not) by works accomplished. Hence (cf. al-Bādjūrī, *Ḥāshiya 'alā... Djawharat al-tawḥīd*, Cairo 1352/1934, 30): the "uncreated faith" of God and the faith of the angels can neither increase nor diminish; the faith of the prophets may grow according as the mission is faithfully accomplished, but it cannot decrease, because of the '*iṣma*, the prophetic "infallibility"; the faith of common men alone can increase or decrease. But the formal constituent of *īmān* being defined, following the *Luma'* of al-Ash'arī, by the interior *taṣdīḳ*, the school habitually distinguished, at the root of faith, an immutable nucleus (the "atom of faith" of the *ḥadīths*) created by God in the heart: it can be lost entirely by an act of unbelief, but it cannot vary. Thus the Ash'arīs admit both the immutability of faith in its main nucleus (cf. Māturīdī-Ḥanafīs), and its variability in its degree of perfection (cf. Ḥanbalīs).

(2) *The degrees of faith*: This question, to a certain extent connected with the last, is nevertheless different from it. It is no longer a matter of lower or upper levels of faith within the same subject, according to "obediences" or "disobediences". It is a matter of the degrees of faith according to its intrinsic nature in different subjects.

The Ash'arī and Shāfi'ī lines, which consider *taḳlīd* to be an unreasoning imitation and a passive acceptance, were severe on "faith through *taḳlīd*" as being valid only for a person incapable of rising to anything higher. The Ḥanbalīs, on the other hand, who defined *taḳlīd* as an intentional and conscious imitation of the Prophet, of the Companions and of their successors, regarded it as a fundamental attitude of the believer (cf. H. Laoust, *Ibn Baṭṭa*, 7, n. 2, and 9, n. 1). Ibn 'Aḳīl, however, was suspicious of it, fearing that recourse to *taḳlīd* would substitute imitation for the seeking of proofs (cf. G. Makdisi, *Ibn 'Aqīl et la résurgence de l'Islam traditionaliste au XIe siècle*, Damascus 1963, 524-5).

The majority of the manuals of *kalām* regard as much superior to "faith by *taḳlīd*" faith based on knowledge (or science), *īmān 'an 'ilm*: an enlightened faith, which "proves" its object. The "proof" in question being understood as arising from the arguments and reasonings of the *mutakallimūn*, the "scientific" faith thus lauded was exposed to attacks by opponents, both Ḥanbalīs and *falāsifa*. Al-Ghazālī (*Iḥyā'*, i, 107-8) mentioned a third degree, higher than the preceding one, the "faith of certitude" (*yaḳīn*). There is probably to be seen here an influence of both Shī'ism and Ṣūfism: this higher degree based on the *yaḳīn* is for al-Ghazālī the only true faith, as was the "interior faith" for the Ikhwān al-Ṣafā'. The same influences are very probably present in Ibn Taymiyya. After defining faith through *islām*, that is through the proclamation of the *shahāda* and the performance of the basic duties (*Kitāb al-īmān*, 32), and after enumerating the feelings of experience which it produces in the heart of the believer (cf. above), he distinguishes in ascending order the faith of the *walī* (one "close" to God), that of the *ṣiddīḳ*

(the most truthful, the just), and that of the prophet. Starting from a "conformist ritualism" (H. Laoust), faith, according to Ibn Taymiyya, ends as *iḥsān* (virtuous conduct), *ikhlāṣ* (sincerity and unadulterated purity), and in the annihilation (*fanā'*) of the created will in a total submission to the divine Commandment.

Bibliography: in the article. A complete bibliography would be immense; in it there would need to be mentioned the "professions of faith" of the various Sunnī schools and of the *firāḳ*, almost all the manuals of *ʿilm al-kalām* and of *uṣūl al-dīn*, and many Ṣūfī spiritual works.

(Ḥādjdjī) **IMDĀD ALLĀH** al-Muhādjir al-Hindī al-Makkī b. Muḥammad Amīn al-Fārūḳī, the spiritual guide and preceptor of a number of leading religious personalities of India (including Muḥammad Ḳāsim al-Nānawtawī, founder of the Dār al-ʿUlūm at Deōband [*q.v.*], Rashīd Aḥmad al-Anṣārī of Gaṅgōh (d. 1323/1905), a well-known *muḥaddith*, *faḳīh*, divine and scholar of his days and Ashraf ʿAlī Thānawī [*q.v.*]), was born at Nānawta (dist. Sahāranpūr, India) in 1231/1815.

A *ḥāfiẓ* of the Ḳur'ān, he was moderately well educated in Persian, Arabic grammar and syntax and jurisprudence, but was never regarded as an *ʿālim* in the traditional sense. He spent his youth in gaining a good knowledge of *taṣawwuf* and soon established himself as a *shaykh* in a mosque in his home-town of Thāna Bhawan (18 miles N.W. of Muzaffarnagar), which later came to be known as the Khānḳāh-i Imdādiyya, the seat of his *silsila*. It was burnt down as a reprisal in 1857, following the insurrection of the local people, but was rebuilt and in course of time produced such great figures as Ashraf ʿAlī Thānawī, one of whose disciples was Sulaymān Nadwī, the celebrated Urdu biographer of the Prophet.

He performed his first pilgrimage to Mecca in 1261/1845, thus gaining the honorific of "Ḥādjdjī", which became an inseparable part of his name. During the Indian Mutiny of 1274/1857 Imdād Allāh and his colleagues also declared *djihād* against the British, following the execution of a certain ʿAbd al-Raḥīm, a leading citizen of Thāna Bhawan, who was accused of being in league with the mutineers. After establishing parallel government in the town they attacked Shamlī, a small neighbouring place, but were routed by the British. Imdād Allāh succeeded in making good his escape but the other ring-leaders of the rebellion were arrested and treated rather leniently. Apprehensive of being arrested, the Ḥādjdjī succeeded in leaving the country incognito and reaching Mecca (1276/1860), where he permanently settled. As a stranger, not esteemed very highly by the local population, he passed some very difficult days in the beginning owing to poverty. Besides his other activities he delivered lectures on Djalāl al-Dīn Rūmī's *Mathnawī* in the Ḥaram al-Sharīf. Gradually his fame as a *ṣūfī* spread and he began to attract many followers. People from India, mostly scholars from Deōband, went all the way across the seas to contract his *bayʿa*, Ashraf ʿAlī Thānawī being one of them. While in Mecca he married three times at a fairly advanced age, but none of the wives bore him children.

He is the author of: (1) *Ḍiyā' al-ḳulūb* (in Persian; ed. Delhi 1877) composed in 1282/1865, on the *adhkār wa-ashghāl* (formulas and practices) of the Čishtiyya order [*q.v.*]; (2) *Ghidha-yi rūḥ* (in Urdu), containing strange tales and parables in verse warning against the wiles of Satan; (3) *Djihād-i akbar*, a long poem in Urdu composed in 1268/1852 on the virtues and merits of *ḳitāl*, in fact a translation of some anonymous treatise in Persian, which shows that even before the Mutiny of 1857 he had been cogitating on the subject of *djihād* which led to his military setback at Shāmlī in 1857 (see above); (4) *Tuḥfat al-ʿushshāḳ* (also a *mathnawī* in Urdu composed in 1281/1864), on gnosis and divine cognition and on *al-ḥaḳīka wa 'l-madjāz*; (5) *Dard-nāma-i ghamnāk*, a small poem in Urdu composed as a plaintive dirge of a forlorn lover; (6) *Irshād-i murshid* (again a poem in Urdu composed in 1293/1876) on spiritual and esoteric experiences, also containing his moral exhortations and apophthegms; (7) *Waḥdat al-wudjūd* (in Persian) composed in 1299/1883; a brief treatise on the doctrine of the Unity of Being as propounded by Ibn al-ʿArabī; (8) *Fayṣala-i haft mas'ala*, a treatise on seven controversial topics of the day, such as *simāʿ*, the visiting of graves, the celebration of the death anniversary of a saint etc., which led to a rift among his own followers; (9) *Gulzār-i maʿrifat*, a collection of his Persian and Urdu verse on spiritual and mystic matters; (10) A *Ḥāshiya* in Persian on the *Mathnawī* (ed. Cawnpore 1314-1321/1896-1903), partly published posthumously; (11) *Maktūbāt-i Imdādiyya* (ed. Ashraf ʿAlī Thānawī, Lahore 1966), a collection of 50 of his Urdu letters written from Mecca during the closing years of his life (the last letter is dated 1317/1899); (12) *Marḳūmāt-i Imdādiyya*, 61 letters in Persian published as an appendix to *Imdād al-mushtāḳ* (ed. Ashraf ʿAlī Thānawī, Lucknow 1915); (13) *Kulliyāt-i Imdādiyya*, a collection of his poetical works, repeatedly published in India and Pakistan (ed. Cawnpore 1315/1898, Shāhkōṭ, dist. Sheikhūpūra, n.d.). Most of these compositions are in verse but he never claimed to be a great poet. These books have been published repeatedly in India and Pakistan with the exception of the *Ḥāshiya* on the *Mathnawī*.

He died in 1371/1899 in Mecca widely acclaimed as a great spiritual teacher, at the ripe age of 84, and was buried in al-Maʿlā, the historic graveyard wherein also lie buried Khadīdja, the first wife of the Prophet, and his uncle Abū Ṭālib.

IMMOLATION [see DHABĪḤA].

IMPIETY, IMPIOUS [see KĀFIR].

ĪMRĀLĪ, ĪMRʿĀLĪ [see EMRELI].

ʿIMRĀN (Hebrew ʿAmrām, modified to an authentically Arabic name, cf. Horovitz, *Koranische Untersuchungen*, 128), name given in "Israelite" history as related by Muslim authors to two persons: the first appears in the Bible but not in the Ḳurʾān; the second vice versa. The first is the father of Mūsā, Hārūn and Maryam [*qq.v.*], the son of Ḳāhith (Kohath), the son of Lāwī (Levi) according to the Biblical genealogy (Exodus, VI, 20) followed by al-Yaʿḳūbī, ed. Houtsma, 31 (tr. G. Smit, *Bijbel en Legende*, 39) and al-Masʿūdī, *Murūdj*, i, 92, tr. Pellat, i, § 85; others, for example al-Ṭabarī, i, 443, and the *Kitāb al-Badʾ wa ʾl-taʾrīkh*, iii, 81/83 insert between ʿImrān and Ḳāhith, Yiṣhar, who according to the Bible was the brother and not the father of ʿAmrām. Rabbinical legend referred to ʿAmrām as an important person in Egypt. In the fabulous version of al-Kisāʾī, ʿImrān is promoted to the rank of vizier and bodyguard of Firʿawn [*q.v.*], with the result that, by a miraculous intervention of Providence, Mūsā came to be conceived actually within the tyrant's palace and thus escaped the destruction of the male children of the Israelites which the latter ordered.

The second ʿImrān (the son of Māthān according to the historians) was, according to the Ḳurʾān, III, 31/35 (cf. LXVI, 12), the father of Maryam, the mother of ʿĪsā (Jesus), and also, according to the historians, of Ashbaʿ (Elizabeth), the mother of Yaḥyā b. Zakariyyāʾ [*q.v.*]/John the Baptist: cf. *Murūdj*, i, 120, tr. Pellat, i, § 117; *Badʾ*, iii, 116/120, 118/123. The genealogy given in the Ḳurʾān was disputed by the Christians (a controversy summarized by R. Blachère, *Le Coran*, note to XIX, 29/28, Paris 1949, ii, 229 = 1957 ed., p. 331).

(J. EISENBERG—[G. VAJDA])

ʿIMRĀN B. ḤIṬṬĀN, AL-SADŪSĪ AL-KHĀRIDJĪ, an Arab sectarian and poet. He hailed from the Banu ʾl-Ḥārith b. Sadūs, a clan of the Banū Shaybān b. Dhuhl. He was first a Sunnī, and is mentioned by Ibn Saʿd (vii/I, 113) in the second class of the "followers" (*tābiʿūn*) of Baṣra; he is named as a transmitter in the collections of Bukhārī, Abū Dāwūd, and Nasāʾī. It is said that he was converted by his wife to the doctrines of the Khāridjīs [*q.v.*] and became the leader of their moderate wing, the Ṣufriyya [*q.v.*], who rejected indiscriminate political murder (*istiʿrāḍ* [*q.v.*]) and were lenient towards those Khawāridj who sometimes abstained from fighting and stayed at home (*al-ḳaʿad*). They were interested in theological problems, and ʿImrān had no equal as their *muftī* and the expounder of their doctrines. Of his life very little is known. When the great revolts of the Khawāridj started in the reign of ʿAbd al-Malik, ʿImrān was persecuted by order of al-Ḥadjdjādj and had to leave Baṣra. Under a false name he found refuge with Bedouin chiefs in the desert, but had to move on as soon as his whereabouts was discovered. For a year he stayed in Syria with Rawḥ b. Zinbāʿ al-Djudhāmī, a favourite of ʿAbd al-Malik, who inadvertently led the caliph to detect his guest's identity. So ʿImrān fled to Zufar b. al-Ḥārith al-Kilābī, the leader of the Ḳays ʿAylān. This happened apparently before Zufar was besieged and subdued by the caliph in 71/691. ʿImrān then fled to Oman, where were living many followers of Abū Bilāl [see MIRDĀS B. UDAYYA]; they received him kindly, but he was again betrayed and went to the Azd in Rūdh Maysān near Kūfa or according to others (Yāḳūt, iii, 889) in Farīth in the district of Wāsiṭ. He died there in 84/703.

ʿImrān had a great reputation as a poet; according to Farazdaḳ (*Aghānī*[3], vii, 232) he would have been counted the greatest poet of his time, had he not devoted all his verses to the cause of the Khawāridj. His *dīwān*, mentioned by Yāḳūt, *Udabāʾ* vi, 139, 1, is lost. He lamented (*Kāmil*, 550, etc.) the death of Abū Bilāl, who was killed in battle in 61/680; he eulogized (*Aghānī*[1], xvi, 153, etc.—the whole poem is extant in *al-Ḥamāsa al-Baṣriyya*) Ibn Muldjam [*q.v.*], the murderer of ʿAlī. In other poems he praises his hosts Zufar (*Kāmil*, 532 f.; *Aghānī*[1], xvi, 254), Rawḥ (*Aghānī*[1], xvi, 153) and the Azd (*Aghānī*[1], xvi, 154; see also Yāḳūt, i, 451). Some of his verses contain pessimistic reflexions on life and death.

Bibliography: Ibn Saʿd, vii/I, 113; Djāḥiẓ, *Bayān*, ii, 132, 136; Mubarrad, *Kāmil*, 530-8 (relying on information obtained from members of the Ṣufriyya, 527, 7); Ashʿarī, *Maḳālāt*, 120, 5; *Aghānī*[1], xvi, 152-7; Āmidī, *Muʾtalif*, 91; Dhahabī, *Mīzān*, ii, 276; Ibn Ḥadjar, *Iṣāba*, iii, 178; idem, *Tahdhīb al-Tahdhīb*, viii, 127 ff.; ʿAynī, *Maḳāṣid*, on the margin of the *Khizāna*, ii, 229 f.; Suyūṭī, *Sharḥ Shawāhid al-Mughnī*, 313; ʿAbd al-Ḳādir al-Baghdādī, *Khizānat al-adab*, ii, 436-41; Madāʾinī wrote a book on ʿImrān (*Fihrist*, 104, 7; cf. *Aghānī*[1], xvi, 155).

(J. W. FÜCK)

ʿIMRĀN B. SHĀHĪN, one of the best known of the bandit-lords who, from the marshes of the *Baṭāʾiḥ* [*q.v.*] where they were entrenched, periodically defied and even threatened the authorities of Baghdād itself. A native of al-Djāmida, a place between Wāsiṭ and Baṣra, ʿImrān was obliged to go into hiding following a crime which he had committed, and from then on led the life of a brigand, for which the region where he dwelt was very suitable. He next entered into relations with Abu ʾl-Ḳāsim al-Barīdī [see AL-BARĪDĪ], who saw in him the man he needed to defend the marshes against his enemies. But as his banditry was threatening the security of the road to Baṣra, the Būyid Muʿizz al-Dawla was several times obliged to send troops against him; this however, because of the local conditions, produced no result, and the government soldiers were usually lured into some place from which they could not escape. Muʿizz al-Dawla was reduced to appointing ʿImrān officially governor of the region, which did not however prevent him and his band on occasion from continuing to pursue his favourite occupation.

Repeated attempts by Muʿizz al-Dawla and his successor Bakhtiyār to put an end to his situation by force were no more successful than formerly; Bakhtiyār was in fact reduced to asking ʿImrān's help to fight against ʿAḍud al-Dawla, the bandit receiving the official *laḳab* of Muʿin al-Dawla. He remained master of the marshes until his death in 369/979 and passed on his power to his son Ḥusayn, with whom ʿAḍud al-Dawla had the same experience as his predecessors had had with his father; however in 372/982-3, Ḥusayn was killed by his brother Abu 'l-Faradj, who himself suffered the same fate the following year at the hands of the *ḥādjib* al-Muẓaffar b. ʿAlī [*q.v.*], who had been a general under the rule of his father, and who then proclaimed as ruler a son of Ḥusayn (a minor) named Abu 'l-Maʿālī; but soon afterwards he established himself in his place, basing his authority on a forged title of investiture bearing the signature of the Būyid Ṣamṣām al-Dawla. On one other occasion, in 412/1021, a son of ʿImrān, Abu 'l-Haydjāʾ Muḥammad, attempted to seize power, but he failed.

Bibliography: See especially Miskawayh and ʿAbd al-Malik al-Hamadhānī, *Takmila*; see also BŪYIDS. (ED.)

AL-ʿ**IMRĀNĪ**, MUʿĪN AL-DĪN AL-HINDĪ, distinguished theologian and scholar of Delhi, whom Shaykh ʿAbd al-Ḥaḳḳ Muḥaddith calls *ustād-i shahr*, "teacher of the (whole) town". He wrote commentaries on *Kanz al-daḳāʾiḳ*, *al-Manār*, *al-Miftāḥ*, *al-Talkhīṣ*, *al-Ḥuṣāmī* and *Talwīḥ* (for MSS, Zubaid Ahmad, cited below). Muḥammad b. Tughluḳ (725-52/1324-51) held him in high esteem on account of his erudition and sent him to Shīrāz to persuade Ḳāḍī ʿAḍud al-Dīn to come to India. The ruler of Shīrāz received him with respect, but persuaded the Ḳāḍī to decline the invitation from Delhi. ʿImrānī was at first critical of the *ṣufīs*, but his pupil Mawlānā Khwādjgī gradually drew him to the mystic path, and he developed a devotion to Shaykh Naṣīr al-Dīn Čirāgh [*q.v.*]; according to the author of the *Maʿāridj al-walāyat*, he received *khilāfat* also from him.

IMROZ, Ottoman name of the island of Imbros in the Aegean Sea, some 15 km off the southern end of the Gallipoli peninsula (Thracian Chersonese), and thus of strategic importance as commanding the entrance to the Dardanelles, Čanaḳ-ḳalʿe Boghazī [*q.v.*]. In 1444, when it was visited by Cyriacus of Ancona, it was still Byzantine (although the neighbouring islands of Thasos and Samothrace were in the hands of the Gattilusio family). When news of the fall of Constantinople (857/1453) reached the island, many of its leading men fled, but the prominent Imbriot Critoboulos (the historian) procured from the Turkish admiral Ḥamza the temporary immunity of the island and sent a deputation to the Sultan at Edirne. However, there was at the Ottoman court at the same time a delegation from the Gattilusi lords of Lesbos and Aenos, and the Sultan granted Imbros to Palamede Gattilusio of Aenos in return for an annual tribute of 1200 ducats. In 860/1456, when the Sultan moved against Aenos [see ENOS] and the admiral Yūnus was sent to annex its maritime dependencies, Critoboulos was appointed governor of Imbros, in which capacity, in the autumn of 1456, he managed to dissuade the commander of the Papal fleet from occupying the island. It was at his prompting too that in the winter of 1458-9 Demetrius Palaeologus, the Despot of Mistra, asked the Sultan to grand him Lemnos and Imbros; so that in 1460 Demetrius (by now expelled from the Morea) was granted these two islands, together with Aenos, Thasos and Samothrace. Although the Venetians took Imbros in 1466, they lost it to a Turkish fleet in 1470, and from then until 1912 it remained in Ottoman hands.

During the First Balkan War, Imroz, with the other Aegean islands, was taken by the Greek fleet (November-December 1912); Greece maintained possession of the island, which was formally ceded to her by the Treaty of Sèvres (August 1920). By the Treaty of Lausanne (July 1923) it was returned to Turkey, with the stipulations that it be demilitarized and that its predominantly Greek population be excluded from the proposed exchange of populations [see MÜBĀDELE]. It is now an *ilçe* of the province of Çanakkale, pop. (1960) 5776.

IMRUʾ AL-ḲAYS (slave of [the god] Ḳays), by-name of several Arab poets. Al-Āmidī mentions ten of them (*al-Muʾtalif wa-'l-mukhtalif*, Cairo 1961, 5-9), while Fīrūzābādī list eleven of them (*al-Ḳāmūs al-muḥīṭ*, Cairo 1913, ii, 244) and al-Suyūṭī fifteen (*Muzhir*, Cairo 1958, ii, 456). Taking account of all the variants in their genealogies, Ḥ. Sandūbī has drawn up a list in which their number reaches twenty-five (*Akhbār al-Marāḳisa wa ashʿāruhum fi 'l-djāhiliyya wa-ṣadr al-Islām*, printed as a continuation of *Sharḥ dīwān Imruʾ al-Ḳays* [4]Cairo 1959, 223-368). The most famous of all these poets is Imruʾ al-Ḳays b. Ḥudjr [see next art.]. Mention should also be made of the two following: Imruʾ al-Ḳays ʿAdī b. Rabīʿa al-Taghlibī, best known under the name of al-Muhalhil, who was the maternal uncle of the Imruʾ al-Ḳays b. Ḥudjr and, according to some, the creator of the form of the classical *ḳaṣīda* (Ibn Ḳutayba, *Shiʿr* 164-6; *Aghānī*, viii, 63; *Khizānat al-adab*, i, 302-4; Fuʾād Bustānī, *Rawāʾiʿ*, and references there given; Sandūbī, *op. cit.*, 231-303); Imruʾ al-Ḳays b. ʿĀbis al-Kindī, who is included among the Companions of the Prophet (Sandūbī, *op. cit.*, 339-47 and references there given). (S. BOUSTANY)

IMRUʾ AL-ḲAYS B. ḤUDJR, name of a pre-Islamic Arab poet, who is generally considered to have died circa 550 A.D. Unfortunately the biographical details on the poet come mainly from Kūfan writers of the second half of the 2nd/8th century, who practically never give their sources and who very often contradict one another. As little as two centuries later, authors collecting these contradictory facts had denounced them as untrustworthy. Hence the portrait of the poet, so far as it emerges from the existing information, is that of an obscure and semi-legendary personality.

His personal name is reported as ʿAdī or Mulayka or Ḥundudj. In addition to that of Imruʾ al-Ḳays ("slave of the god Ḳays"), he is said to have had the by-names of Dhu ʾl-ḳurūḥ ("the man covered with ulcers") and al-Malik al-ḍillīl ("the wandering king"); there are also attributed to him three *kunyas*: Abu ʾl-Ḥārith, Abū Wahb and Abū Zayd.

On his genealogy the sources disagree. The chain of ancestors given by the Baṣran al-Aṣmaʿī differs on several points from those provided by the Kūfan Ibn al-Aʿrābī, the Baghdādī Muḥammad b. Ḥabīb or other sources which the *Aghānī* cites without naming them. There is even disagreement over the name of the father of Imruʾ al-Ḳays (Ḥudjr or al-Simṭ), that of his grandfather (al-Ḥārith or ʿAmr or Imruʾ al-Ḳays), and that of his mother (Fāṭima bint Rabīʿa or Tamlik bint ʿAmr).

The most usual version of his life may be summarized as follows: as a child he had lived at the court of Ḥudjr, the last king of the Kinda, of whom he was the youngest son; but soon his passion for poetry, and especially erotic poetry, led to his being expelled from his father's house. Here there comes an episode which has all the characteristics of a romanticized addition: the father, in his anger, instructs his freedman Rabīʿa to put the young poet to death and to bring him his eyes; Rabīʿa, seized with pity, merely kills a young antelope and takes its eyes to the hasty father. Later, the father repents, learns of the substitution, summons his son and is reconciled to him. Once again however, and for the same reasons, Imruʾ al-Ḳays was expelled from his father's house and began to lead the life of a carefree vagabond. At the head of a band of roughs, he began to wander in the desert, dividing his time between hunting, drinking and song. In order to enliven his libations he had taken with him his singing slave-girls.

It was during a drinking session that he received the news that his father had been assassinated. The Banū Asad had revolted against their ruler and had succeeded in having him killed. From then on Imruʾ al-Ḳays's only aim was to avenge his father.

Helped by the Banū Bakr and the Banū Taghlib, he succeeded in inflicting heavy losses on his enemies and in putting them to flight. His allies, considering that he was sufficiently avenged, refused to continue the fight and abandoned him. It was then that he began to wander among the tribes, at first in search of allies, then, after the king of Ḥīra had sent troops in pursuit of him, seeking a refuge. It was thus that he arrived at the court of al-Samawʾal, prince of Taymāʾ, who gave him refuge in his castle al-Ablaḳ. Al-Samawʾal next recommended him to the Ghassānid al-Ḥārith the Lame, who helped him to reach the court of Justinian in Constantinople. Justinian is said to have received him well and agreed to give him the command of an army whose task was to restore his throne to him and to avenge his father's death. Imruʾ al-Ḳays then set off on the return journey, and he was already near to Anḳara when he was met by an emissary bringing him a present from the emperor: this was a shirt of Nessus which poisoned him, covering his body with ulcers and finally killing him. He was thus punished, it is related, for having, while in Constantinople, seduced Justinian's own daughter (though in fact history does not mention that Justinian had a daughter). But neither the crime nor its punishment seems to have destroyed the poet's glory, since it is said that the emperor erected a statue to him on the actual site where he was buried, a statue which was seen by al-Maʾmūn.

This is of course not the only version of the biography of Imruʾ al-Ḳays. The available sources contain other variants, all equally romanticized and agreeing only on the most important points. Furthermore, the facts reported about the poets said to have been in direct contact with him, such as ʿAlḳama, ʿAbīd b. al-Abraṣ and ʿAmr b. Ḳamīʾa, are just as imprecise and suspicious; they throw no light at all on his life. Of the same order are the statements of Nonnosus and Procopius, in which certain modern authors have thought to find a reliable historical basis which would confirm the statements in the Arab traditions. In fact it is now established that the two historians are not referring to Imruʾ al-Ḳays (Amorkesos) but to Kaisos, *i.e.*, Ḳays b. Salama b. al-Ḥārith; by the same token, the arguments which some have thought they found in them to prove that Imruʾ al-Ḳays was a Christian are valueless, and this remains a pure hypothesis. It should moreover be pointed out that the Kaisos of whom the two Greek authors were writing was converted by Justinian himself and that he returned home with honour after having been appointed Phylarch of Palestine. Neither of these two sources mentions his death on the way.

The poems which bear the name of Imruʾ al-Ḳays were collected towards the end of the 2nd/8th century by the Kūfans Abū ʿAmr al-Shaybānī and Khālid b. Kalthūm, the Baṣran al-Aṣmaʿī and, later, the Baghdādī Muḥammad b. Ḥabīb. Based on these collections, two definitive recensions were established during the 3rd/9th century, one by Ibn al-Sikkīt and the other by al-Sukkarī. Ibn al-Nadīm mentions also a partial recension made by Abu ʾl-ʿAbbās al-Aḥwal.

On the authenticity of these poems, we have the testimony of one of these authors, al-Aṣmaʿī, who says: "All the poems which have survived under the name of Imruʾ al-Ḳays have been transmitted by Ḥammād al-Rāwiya except for some poems communicated by Abū ʿAmr ibn al-ʿAlāʾ". But it is known that the Baṣrans considered Ḥammād a forger. There is found in al-Marzubānī another judgement of al-Aṣmaʿī which agrees with that of the first and a similar judgement attributed to al-Riyāshī. Thus we have the insoluble problem of the attribution of the poems which pass under the name of Imruʾ al-Ḳays. This would explain also why Ibn Sallām draws all his quotations from Imruʾ al-Ḳays from only two of his poems, and why the number of the other poems to which he alludes in his study on the poet is no more than two—this in spite of the fact that in his day at least one of the two great recensions of the *dīwān* had already been made.

If, in spite of this doubt over the authenticity of the greater part of his work, Imruʾ al-Ḳays has acquired the reputation of a master, this is probably thanks to the cult devoted to him by some great scholars of Baṣra and to two traditions, the one attributed to the Prophet and the other to ʿAlī. The

former, in terms which vary according to the transmitters, expresses high regard for Imru' al-Ḳays and makes him the "leader and standard-bearer" of the poets; the latter praises his ingenuity, affirms his superiority, and stresses the disinterested driving-power which lay behind his poetic production.

Those who have proclaimed his superiority have admired above all the ingenuity of his metaphors and his concise and skilful treatment of various traditional forms and poetic themes. They state also that he was the creator of the classical form of the *ḳaṣīda* (whereas others consider that this was the work of his maternal uncle Muhalhil, and the Banū Bakr consider it to have been ʿAmr b. Ḳamīʾa, said to have been his companion on his journey to Constantinople). It should however be noted that in spite of the two traditions just mentioned and the arguments of his admirers, the majority of the scholars of Kūfa continued to prefer al-Aʿshā to him, those of the Ḥidjāz preferred Zuhayr, and certain important Baṣrans, such as al-Aṣmaʿī, sometimes hesitated to prefer him to al-Nābigha.

His *dīwān* was first published by de Slane, in Paris, in 1837. This edition consisted of the 28 poems forming the recension of al-Aṣmaʿī. Next there appeared the edition of Ahlwardt (London 1870), which contained 68 poems and which reproduced the recension of al-Sukkarī with some additions drawn from various literary sources.

The section edited by de Slane was reprinted in various editions appearing later in Egypt, Iran and India. There have been other more scholarly oriental editions, the most important of which were that of al-Sandūbī (Cairo 1930) and that of Beirut (1958). The most complete edition remains that of Muḥammad Abu 'l-Faḍl Ibrāhīm (Cairo 1958; 2nd ed. 1964). In it there appears the recension of al-Aṣmaʿī, another attributed to al-Mufaḍḍal al-Ḍabbī and approved by his pupil Ibn al-Aʿrābī (it cannot be very different from that of Abū ʿAmr al-Shaybānī, another pupil of al-Mufaḍḍal, to which the author of the recension refers for certain corrections), as well as the recension of al-Sukkarī (67 poems), and some additions which could have originated from the other collections mentioned by Ibn al-Nadīm. The total number of verses in this edition is 1399, only 485 of which come from the recension of al-Aṣmaʿī.

Among the poems in this *dīwān*, it is the *muʿallaḳa* which has aroused the most interest. Appearing in the collection of the *muʿallaḳāt*, it was edited and translated, with all the other *muʿallaḳāt*, into Latin by L. Warner (Leiden 1748), into English by W. Jones (London 1782), Clouston (Glasgow 1881) and Johnson (London 1881), into Swedish by B. M. Bolmeer (Lund 1824), into French by S. de Sacy (*Mém. de l'Acad. des Insc.*, 1, 411), Caussin de Perceval (*Essai sur l'hist. des Arabes*, ii, 326-32), and by Raux, into German by A. T. Hartmann (1802), Nöldeke (1899) and Gandz (1913), and into Russian by Murkes. It appears also in the various editions of the commentary of al-Zawzanī (1st ed. by Hengstenberg, Bonn 1823), of that by Naḥḥās (Leiden 1748 and Halle 1876), of that by Tabrīzī (Calcutta 1894) and of the Turkish commentary by Farsaḳ (Istanbul 1316 A.H.).

(S. BOUSTANY)

IMTIYĀZĀT, commercial privileges, capitulations.

i.—The earliest documentary evidence for commercial privileges emanating from Muslim chanceries in the Mediterranean world dates from the 6th/12th century. While it is unlikely that these documents represent the earliest manifestation of that diplomatic and commercial activity between rulers of Islam and Christendom which culminated in the Ottoman Capitulations, it is probably useless to speculate upon either the form or the language of chancery instruments before that date. The extant documents, ranging from Muslim Spain to Egypt and Syria, are internally designated *fuṣūl*, *shurūṭ*, *marsūm*, *amān*, *kitāb amān*, and occasionally *ṣulḥ*. They are, with very few exceptions, unilateral and, from a juridical point of view, represent decrees (*marāsīm*) rather than documents of certification (*ḥudjadj*). From the point of view of chancery practice, the commercial privileges were derived from the type of document embodying the principle of *amān*, and more especially from a subdivision of that category designated *amān ʿāmm* in the formularies. The consequence of this classification was to restrict the role of originator of such documents to the head of the community (*imām*) or his representative (*nāʾib*). The retention of the technical term *amān* is to be understood as an attempt at the rhetorical concealment of juridical innovation.

All of the commercial privileges included, either explicitly or implicitly, the following provisions with respect to the status of non-Muslim, non-*dhimmī* merchants in *dār al-islām*:

1. General security of person and property, including:
 A. Testamentary rights, freedom of worship, burial, and dress.
 B. Repairs to ships, emergency rations, aid against attack by corsairs, and abolition of the *lex naufragii*.
 C. Permission to address complaints to the head of the Muslim community.
2. Exterritoriality, including:
 A. Consular jurisdiction.
 B. Consul's salary and other exemptions.
3. Abolition of collective responsibility.

Swearing an oath and affixing an attestation appear to have been limited to such of these privileges as constituted an *instrumentum reciprocum*, or which were negotiated in *dār al-ḥarb*. The period of validity is occasionally specified in the North African documents, seldom in the Levantine ones, though source material external to the documents themselves would seem to indicate either indefinite duration or renewal for two year periods coincident with the appointment of consular representatives for a particular merchant community.

The evolution of the commercial privileges is characterised by the conflicting principles of *ius soli* and *ius sanguinis*, exhibited in the fluctuating application of exterritoriality in the sectors of public and private law, respectively. If the consul retained the right of jurisdiction in matters of intestacy and other litigation internal to his community, he could also be held responsible for debts contracted by members of that community. The appearance of a differentiated concept of *kafāla* [*q.v.*] lent reality to the originally theoretical concept of *amān ʿāmm* as a collective instrument, and as such is analogous to the evolution of *procuratio* in European merchant law. The notion of consul as hostage (*rahīna*) was a practical proposition. There was thus a logical consistency in the issue of commercial privileges as unilateral decrees, which suited well the exigencies of an economy based to a great extent upon regalian monopolies and the rules of a chancery procedure symbolised by the introductory convention *rusima*. Exceptions to this state of affairs were few, and are perhaps best illustrated by the Mamlūk-Venetian *treaty* of 913/1507, which was, in the event, never ratified by the Sultan.

The question of cross-fertilization between the merchant law of Islam and of medieval Europe is a vexed one, and may eventually be answered by recourse to linguistic rather than juridical evidence. There is a distinct possibility that the contemporary European "translations" of such Arabic documents as are preserved are in fact the "originals" of the (admittedly paraphrastic) Arabic versions, themselves but roughly adapted to the conventions of Muslim chancery practice. In this respect one need only remark the numerous and consistent deviations in the extant documents from the prescriptions set out in the *inshāʾ* manuals.

Bibliography: See the articles, AMĀN, CONSUL, ḌAMĀN, DIPLOMATIC, DJIWĀR, KAFĀLA; and J. Wansbrough, *The safeconduct in Muslim chancery practice*, in *BSOAS*, xxxiv (1971), 20-35.

(J. WANSBROUGH)

ii.—THE OTTOMAN EMPIRE

A. Character and content of the "capitulations". In the granting of concessions to *ḥarbīs*, the Ottomans always endeavoured to conform to the prescriptions of *fiḳh* (of the Ḥanafi *madhhab*, see Ibrāhīm al-Ḥalabī, *Multaḳāʾ al-abḥur*, T. tr. Mevḳūfātī, Istanbul 1320, i, 347-9). The Shaykh al-Islām was consulted when new capitulations were proposed, (cf. G. F. Abbott, *Under the Turk* . . ., 149; Charrière, iii, 92), and if a new problem arose involving a *mustaʾmin* and a Muslim, a *fatwā* on the point was obtained (see, *e.g.*, a *fatwā* of 1046/1637 ruling that a Muslim could not break a sale-contract unilaterally, Istanbul, Başvekâlet Arşivi, DHY, Françalu no. 26/1).

The precondition for granting to a *ḥarbī* the guarantee of *amān* [*q.v.*] was that he should make application for it with a promise of friendship and peace —a point which is stated in the first lines of every *ʿahdnāme*; and it is in return for this undertaking that the *imām* binds himself to guarantee *amān*, the *amān* being confirmed by an *ʿahd*, "covenant"; the document drawn up to embody the covenant is called *ʿahdnāme*, and the items in it *ʿuhūd* or *shurūṭ*. The Ottomans maintained this terminology; but the *ʿahdnāme*, like all documents conferring a privilege, was drawn up in the form of a *berāt* (also called *nishān*). The oath in the document (for the formula see V. L. Ménage, in *Documents from Islamic chancelleries*, Oxford 1965, 94) is the element binding the Sultan before God and hence guaranteeing his promise to the *mustaʾmin*. The character of the *ʿahdnāme* as a unilateral and freely-made grant or concession is well described by J. Porter (*Observations*, London 1771, 362). The Sultan retains authority to decide unilaterally when the *mustaʾmin* has broken the pledge of "friendship and sincere goodwill (*ikhlāṣ*)" and when in consequence the *ʿahdnāme* is rendered void. It is for this reason that in firmans etc. sent to Ottoman officials there always appears the phrase that the *mustaʾmin* has undertaken to behave "in friendly and faithful fashion" (*dostluk ve ṣadāḳat üzere*). Like all *berāts*, *ʿahdnames*, being granted by the individual Sultan personally, had to be confirmed by his successor.

In conceding an *ʿahdnāme*, the Ottoman authorities kept in view (1) the principles of *fiḳh*; (2) the political advantages to be expected from the applicant state; (3) the economic and financial interests of the Empire; the determining factors were usually the opportunity of acquiring a political ally within Christendom, of obtaining scarce goods and raw-materials such as cloth, tin and steel, and especially of increasing customs revenues, the principal source of hard cash for the Treasury. The European power, after consulting its consul or its merchants, would attempt to procure the inclusion in the *ʿahdnāme* of the guarantees it felt to be desirable—often attempting to impose its will by threatening to boycott Ottoman ports. If, after the conclusion of the *ʿahdnāme*, new questions arose needing regulation, these were settled by a supplementary *khaṭṭ-i sherīf*, which was usually incorporated in the renewed *ʿahdnāme* in the form of supplementary articles (*e.g.*, the English capitulations of 1086/1675). The *ʿahdnāme* overrode, in cases of conflict, *ḳānūns*, firmans and regulations having only local application: several firmans survive which order the cancellation of earlier orders found to be contrary to the *ʿahdnāme* (*e.g.*, London, Public Record Office, SP 105/216, firman of 1111/1699). After an *ʿahdnāme* was made, the Sultan would send firmans to the relevant officials informing them of the articles and commanding them to obey them.

It was tacitly understood that reciprocal advantages were expected in return for the privileges conceded, and that if these advantages failed to materialize, the Muslim ruler could claim that the

precondition of "friendship and sincerity" had been broken (cf. Mas Latrie, *Traités de paix*, 114-5). When the Venetians were unable to guarantee secure passage by land and sea for Muslim merchants operating in Venice (for whom see A. Sagredo-F. Berchet, *Il Fondaco dei Turchi in Venezia*, Milan 1860; Ş. Turan, *Venedik'te Türk ticaret merkezi*, in *Belleten*, xxxii/126 (1968), 247-83), the Ottoman government warned them to remember their obligations to give reciprocal protection (letter of Rüstem Pasha, publ. by T. Gökbilgin in *Belgeler*, i/2, 161; Turan, *op. cit.*, 276). In the capitulations granted by Türkmen princes of Anatolia (see below) and in Ottoman *ʿahdnāmes*, the principle of reciprocity was expressly stated in such matters as compensation for damage inflicted at sea, individual (and not collective) responsibility for debt, the seizing of fugitive debtors, and the protection of the lives and goods of victims of shipwreck (cf. the Venetian capitulations of 947/1540, publ. Gökbilgin, *Belgeler*, i/2, 248-50). This principle of reciprocity enabled especially *dhimmī* Ottoman subjects (Jews, Armenians, Greeks and Slavs) to engage in business operations in Europe. In Eastern Europe, particularly in Poland, the Levant trade passed almost entirely into the hands of such *dhimmīs* enjoying the Sultan's protection. Many *dhimmīs*, after serving Western merchants in Levant ports as dragomans, brokers and agents, became powerful rivals to West European merchants in Venice and Leghorn, so that the Venetians and the French contemplated attempting to limit their activities (Ch. Roux, 153; Porter, 433-7; H. Inalcık, *Capital Formation in the Ottoman Empire*, in *J. Econ. Hist.*, xxix (1969), 97-149. The Ragusans, enjoying the status of *kharādj-güzār*, could profit most from Ottoman protection. Reciprocity was therefore a reality, from which the whole Empire benefited.

I. The creation of *mustaʾmin* communities and their privileges. Groups of foreign merchants resident in an Ottoman city or port would choose for themselves a representative to act for them in dealings with the authorities, variously known as *bailo* (T. *balyoz*), consul (*T. konsolos*) or (for the Florentines) *emino* (= T. *emīn*); the Sultan would grant this representative a *berāt* setting out his duties and the extent of his authority, and an officially recognized group—a *ṭāʾife*, or a *millet*—thus came into existence. The procedure is comparable with that by which the *ketkhudā* in a guild or the leader (patriarch, bishop etc.) of a religious community was chosen and granted official recognition by virtue of a *berāt*. Such at least in the first centuries was the Ottoman government's view of *mustaʾmin* communities, so that, for example, as late as 1044/1634, the Sultan, by a *khaṭṭ-i sherīf*, appointed the Comte de Césy as French ambassador without waiting for word from the King of France (Tongas, 32-3). However, when other Western nations obtained capitulations in the years round 1600, they began to import new concepts and to attempt to win for these merchant-groups full extraterritorial status, thus provoking disputes. The Ottomans, it is true, never permitted these groups to become autonomous colonies dwelling in their own fortified quarters, as had been the situation in the Byzantine Empire and in the territories of the Golden Horde; yet the group's home government or company would sometimes promulgate a code of regulations prescribing the internal government of the group or strengthening its own control over it (for the French, see Comte de Saint Priest, *Mémoires*; P. Masson, *Un type de réglementation commerciale* ..., in *Viertelsj. f. Soz und Wirt.-gesch.*, vii, 249-95; Fr. Ch.-Roux, *Les Echelles* ..., 171-93; R. Paris, *Hist. du commerce de Marseille*, v, 199-237; for comparison of the Venetian, English and Dutch systems, see N. Steensgaard, *Consuls and Nations in the Levant*, in the *Scandinavian Economic History Review*, xv/1-2 (1967), 13-55). In the 11th/17th century, the Western states tried to impose on the Ottoman government their own interpretation of the status of the consul by procuring the insertion into the capitulations of articles declaring him to be the deputy of the ambassador, that he could not be imprisoned, that lawsuits against him be referred for decision to the Porte, that he could be removed or replaced only by the ambassador (see *e.g.*, the English capitulations of 1010/1601, in Ferīdūn, *Munshaʾāt*[2], ii, 550). Ambassadors resident in Istanbul were at first treated like consuls, and regarded as the general representatives at the Porte of their *millets* dwelling in the Empire. The appointment of consuls and dragomans in the ports, like all the dealings of the *millet* with the central government, could be carried through only by the intermediary of the ambassador. The relationships of the ambassadors to their own governments and to their nations' *millets* varied for the different countries concerned —Venice, France, England and Holland (details in Steensgaard, *op. cit.*).

The consul was empowered by his *berāt* to supervise the affairs of his *millet*; to register incoming goods; and to collect the appropriate dues for the ambassador and the consul. No ship of his "nation" could leave port without his authorization, and he resolved disputes and settled suits between members of his nation according to his home country's laws and customs. His person, his servants and his animals were immune from interference, at his residence, on the road, or at overnight halts; his personal goods were exempt from customs' dues (for an example of a consul's *berāt* see London, PRO, SP 105/334, for W. Rye, of 1039/1629). In the execution of these duties the consul could call upon the assistance of the Ottoman authorities (this power being one of the factors which made it essential for him to hold a *berāt*). The ambassador and the consul were each granted a *čavush* and one or more Janissaries (also termed yasakčī) (cf. Kurat, *Türk-İngiliz münasebetleri* ..., p. 197, doc. IX).

The consul's judicial authority, based on the concept of "personality of law" (Venetian caps. of 927/1521, art. 16; French caps. of 977/1569, art. 12; English caps. of 988/1580, art. 16), is a principle going back to the earliest capitulations (Mas Latrie, *Traités* ..., 87-9). The French government organised this in the Ottoman Empire by detailed laws and regulations (K. Lippmann, *Die Konsularjurisdiction im Orient*, Leipzig 1898; A. Benoît, *Étude sur les capitulations* ..., Nancy 1890). Criminal cases and suits between a *mustaʾmin* and a Muslim had to be heard in Ottoman courts. Many new articles were inserted into the *ʿahdnāmes* to ensure that the *mustaʾmin* received just treatment in the courts: proceedings could be instituted only in respect of transactions which had been entered in the *ḳāḍī*'s register and for which a *ḥüdjdjet* had been given (French caps. of 977/1569, art. 6; English caps. of 988/1580, art. 6); a case could not be heard unless the *mustaʾmin*'s dragoman was present (Venetian caps. of 927/1521, art. 17; French caps. of 977/1569, art. 11; English caps. of 988/1580, art. 15); the testimony of a *dhimmī* was to be accepted in cases between a *mustaʾmin* and a *dhimmī* (Venetian caps. of 927/1521, art. 23); cases and appeals involving more than 4,000 *akčes*

were to be heard only in the *Dīwān-i Humāyūn* (English caps. of 1010/1601, art. 24); cases arising from the accusations of false witnesses were not to be heard (French caps. of 977/1569, art. 7). Whereas in the 9th/15th and 10th/16th centuries *musta'mins* frequently had recourse to Ottoman courts even in cases arising among themselves (see *Belleten*, xxiv/93 (1960), 71), in later years the less heavy court fees sometimes prompted Muslims to prefer the consular courts (Steengaard, 23).

By the draft capitulation (see below) of 943/1536, a *musta'min* who settled in Ottoman territory would have to assume the status of a *dhimmī*, subject to *djizya*, after ten years residence (although by Ḥanafī law he was permitted to remain *musta'min* for only one year; Mevḳūfātī, i, 348). In practice, the Ottomans did not enfore any rule, regarding the *musta'min* merchants as continually coming and going. Yet from time to time attempts were made to make them liable to *djizya* (*e.g.*, in 1025/1616, see Belin, *Les capitulations*, 89; Wood, 50, and later: see Basvekâlet Arşivi, DHY, Françalu no. 26, docs. of Rabīʿ II 1059 and Radjab 1061).

After Istanbul, the most numerous foreign *millets* were resident at Smyrna (from the end of the 10th/16th century; chiefly the English, then the French and the Dutch, a few Venetians); Sidon (French); Aleppo (French, Venetians, English, Dutch); Salonica (after 1096/1685 the French, later other nationalities); Cairo (French, Venetians and, for a time, English). The suggestion that Meḥemmed II accorded recognition to various special privileges of the Genoese of Galata and that these privileges were later extended to the *Lātīn milleti* (*Magnifica Communità di Pera*) (see M. A. Belin, *Hist. de la Latinité de Constantinople*, Paris 1884, 166) needs re-examination (see for the moment, Belin, *op. cit.*, 156-65; E. Dallegio d'Alessio, *Traité entre les Génois de Galata et Mehmet II*, in *Échos d'Orient*, xxix, 161-75; T. C. Skeat, *Two Byzantine documents*, in *BMQ*, xviii (1953), 71-3). In the original text of the *ʿahdnāme* (in Greek) dated 23 Djumāda I 857/1 June 1453 (text given by Skeat, *loc. cit.*) the Sultan promises, under oath, that he will not bring troops and destroy the walls (according to some translations: he *will* destroy the walls) and that the Genoese may live there according to their own laws and customs under a *Ketkhudā* elected from among themselves. But when, before leaving for Edirne on 3 June, he visited Pera, he changed his mind (in the light of the demands of public security) and had the land walls destroyed here and there, thus cancelling one of the principal terms of the *ʿahdnāme*; Pera became an entirely "Ottoman" town, under the control of a *subashī* and a *ḳāḍī* [see ISTANBUL].

From the very earliest period the principle of the collective responsibility of the *millet* for crime [see DIYA] or debt had been excluded (cf. Mas Latrie, 92); all the same, the Ottoman government, like other earlier Islamic governments, obliged the *musta'min* community to pay a collective fine, a kind of indemnity for damages, when the "guest" nation imposed loss on the "host" state or its populations—through through attacks by pirates, failure to pay a public debt arising from the farming of a source of revenue (*iltizām*, see MÜLTEZIM), or the circulation of forged currency (see, *e.g.*, Chardin, i, 15; Abbott, *Under the Turk*, 237-43; Masson, i, 176): the Ottoman justification for this was that the "guest" nation had thus blatantly infringed its promise to maintain "friendship and sincerity". These levies must be distinguished from the *avanias*, Fr. *avanies*, which pashas exacted for their own personal profit. (The word *avania*, signifying collective forced levies of all sorts, derives, according to B. Homsy, *Les capitulations*, 57, from A. *hawāna*; but more probably its origin is *ʿawān*, "anything extorted", from the root *ʿny*; a connection with *ʿawāriḍ* is most improbable.) The attitude of the central government to the extortion of *avanias* by pashas varied according to the circumstances and the prevailing climate of relations with the "nation" involved. There are in the Ottoman state archives documents ordering the restitution of *avanias* (Başvekâlet Arşivi, DHY Ecnebi defterleri). In attempts to put a stop to them, the foreign states had new articles inserted in the capitulations (French cap. of 1013/1604, art. 16; English cap. of 1010/1601, arts. 20 and 30; for *avanias* in general see Masson, i, 1-4; Roux 53-6; R. Paris, 294-316; Svoronos, 56-66). Demands for *avanias* were contested by ambassadors and consuls in the name of the *millet*; the *cottimo* due, collected by consuls on the trade of goods of their *millet* in order to meet *avanias*, came to be a regular impost. The Venetians collected 1% on some imported wares, especially cloth (see Brit. Mus., Ms Or. 9053, fol. 282), the French imposed on every ship loading at an Ottoman port a fixed sum graded according to the tonnage of the ship (Masson, i, 176; Svoronos, 70-5).

II. Privileges of individuals.

The number of privileges accorded to individual merchants increased as new articles were appended to the *ʿahdnāmes*. These were in practice longstanding rights recognized by custom, which, through the pressure of the *musta'mins*, were progressively codified as specific articles in the capitulations (for a systematic description of these old articles, see Mas Latrie, 83-116).

The *amān*, which guarantees the *ḥarbī*'s right to travel within the *dār al-islām* without being enslaved or having his goods looted as *ghanīma* [*q.v.*], was valid for the whole Ottoman Empire (*bi 'l-djümle memālik-i ʿOthmāniyye*); but for the practical implementation of this general *amān* by the individual, any *musta'min* proposing to travel needed to obtain (through the intermediary of his ambassador) and to carry with him a special authorization from the Sultan, an *idhn-i hümāyūn* (see J. H. Mordtmann, *Zwei osmanische Passbriefe* ..., in *MOG*, i, 177-201; Ménage, *loc. cit.*, 96-9; this document was termed *mürurnāme*; a similar authorization granted by a *ḳāḍī* or another official was called *yol tedhkiresi*; for an article relating to these: Venetian caps. of 928/1521, art. 21). In fact *musta'mins* were normally resident only in a limited number of ports, and within these ports in specified quarters and *khāns* (the merchants of Sidon were confined to their *khān*, see DHY, Françalu 26/1, a document of 1059/1649; but in other places, Smyrna, Aleppo and Galata, they enjoyed considerable freedom of movement). The *ḳāḍīs*' registers reveal instances of foreigners being enslaved by Muslims (*e.g.*, Bursa, *Sidjillāt*; cf. Dernschwam, *Tagebuch*, ed. F. Babinger, Munich 1923, 42). Separate articles permitted them, in order to avoid molestation, to wear Muslim dress and to carry arms.

The residences of *musta'mins* could be searched by Ottoman officials only if there was a suspicion that they were harbouring fugitive criminals or slaves, or smuggled goods. The abuses to which this exception opened the way gave rise to new articles (*e.g.*, French caps. of 1153/1740, art. 65).

As to a *musta'min*'s property, if he died in the Ottoman Empire leaving a will, his property went

to the designated heir(s). If he died intestate or if his heir(s) were resident elsewhere, his estate was taken into trust by the *ḳāḍī* and passed by him to the consul or to the deceased's partners and friends. This rule—a principle of *fiḳh* (cf. Mevḳūfātī, ii, 284)—was incorporated into the general corpus of Ottoman *ḳānūn*s as a separate statute (see *TOEM*, *ʿilāve* for 1329, p. 52).

III. *Amān* by sea.

Guarantees for travel by sea elaborated from the principle of *amān* did not figure in the early works of *fiḳh* (cf. M. Khadduri, 109-17), but are found in the earliest capitulations (Mas Latrie, 97), so that a *mustaʾmin* was entitled to invoke *amān* when threatened by a Muslim ship. But it should be noted that the principle of reciprocity appears most clearly in those articles concerning relations at sea. The Ottomans seem to have regarded their suzerainty as extending over the Aegean Sea, the Black Sea, the Red Sea, the Straits (Bosphorus and Dardanelles) and the Strait of Otranto (see the Venetian treaty of 928/1521), or, in other words, they regarded these waters as forming part of the Dār al-Islām. In 1159/1747, during the War of the Austrian Succession, the Ottomans attempted to forbid French and English ships from engaging in hostilities east of a line from the tip of the Morea to the Western extremity of Crete and thence to Egypt. In 1109/1697, all warlike demonstrations were forbidden off Ottoman ports within gunshot of the citadel (PRO, SP 105, docs. of 1109/1698). As in earlier capitulations, so in the Ottoman *ʿahdnāme*s, *mustaʾmin*s were granted free navigation by sea, with security against attacks by Muslim vessels; the right to anchor in Muslim harbours and to take on supplies and water at any point on the coast; exemption for ships and crews from being impressed for any *angarya* duty; help and protection at sea or if driven ashore; security for their persons and their goods if they were compelled for any reason to land; joint protection against pirates; and indemnity for losses due to piracy (Venetian caps. of 928/1521, arts. 4, 5, 7, 13, 14, 22, 25, 26; French caps. of 977/1569, arts. 1, 2, 13, 15, 17; English caps. of 1086/1675, arts. 1, 3, 4, 6, 17, 19). As long as the "Barbary Pirates" were under Ottoman suzerainty, new articles were drawn up to ensure protection against them (French caps. of 1012/1604, arts. 19, 20; English caps. of 1086/1675, art. 47). In the 11th/17th century when *mustaʾmins*' ships were permitted to engage in the carriage of passengers and goods between Ottoman ports, new articles appeared to cover this (*e.g.*, English caps. of 1086/1675, arts. 41-4).

IV. Guarantees for the free transport and sale of goods.

These matters are usually dealt with in the first articles, immediately following the declaration of the grant of *amān*, and to them were later added additional articles framed to deal with abuses. They reserved the right of local authorities and masters of Ottoman warships to search for prohibited or smuggled goods (articles against abuse of this right: French caps. of 1013/1604, arts. 30, 32, 44; English caps. of 1086/1675, arts. 17, 20, 23, 53). It was conceded that after ships had been inspected in Istanbul and in the Bosphorus they need not be inspected again at Gallipoli (Venetian caps. of 928/1521, art. 26). Occasionally a customs officer would force a merchant to unload goods against his will (hence art. 17 of the French caps. of 1013/1604); local merchants would intrigue or exercise pressure to buy goods at a price they determined (hence art. 33 of these last caps., art. 5 of the English caps. of 1086/1675), or to sell at their own price (hence docs. in DHY, Françalu no. 26/1).

Various obstacles were encountered by foreign merchants when, for example, the Ottoman state from time to time prohibited the export of various wares (especially cereals, leather, cotton and metals) in order to prevent the starving of internal markets, or granted monopolies or *iltizām*s for the sale of different commodities; these gave rise to new articles in the capitulations (French: art. 14, English: art. 53)—although the usual remedy was to resort to widely-organized smuggling (Masson, i, 417).

In their earliest *ʿahdnāme*s the Ottoman authorities were content to prescribe that customs and other dues should be levied "according to custom and the current regulation" (*ʿādet ve ḳānūn üzere*), without mentioning a specific percentage. Hence Meḥemmed II had no difficulty in raising the custom's rates from 2% to 4% and finally, at the end of his reign, to 5%. 5% was the general rate in the 10th/16th century, but the Ottoman customs tariff varied according to the status of the importer, the nature of the commodity, and the area where it was enforced; nor was is clearly distinguished from dues levied on goods in transit within the Empire [see MAKS]. As a result of the numerous disputes provoked by these inconsistencies, the *mustaʾmin*s succeeded, not without great difficulty, in getting the minimum customs rate fixed at 3% (for the history of this struggle, see Wood, 27) and in obtaining exemption from all other dues (*i.e.*, principally *ḳaṣṣābiyye* or *ḳaṣṣāb-akčesi*, *maṣdariyye*, *reftiyye*, *yasakčī*, *bādj*—for all of which, see MAKS). The traditional practice of making payments to clerks and servants in the custom's department brought the customs rate up from the official 3% to a real 4½%. Some commodities were also subject to additional duties: cotton to *ḳanṭār-resmi*, silk to *mīzān-resmi*, mohair to *ṭamgha-resmi*, etc. Again, each ship had to pay to the high officials of the port at which it called a fixed sum (at first 300 *akče*s, in the 11th/17th century 9600 *akče*s), under the name of *selāmlīk* or *selāmetiyye*. *Mustaʾmin* merchants also had to contribute to the support of their ambassador and consuls, by paying a due of 2½% as "*consulage*" (T. *ḳonsolos ḥaḳḳī* or *baylādj ḥaḳḳī*). These dues together, with the basic customs duties, brought the total rate in practice to at least 9%. In order to prevent disputes the ambassador finally managed to procure the establishment of fixed tariffs and their inclusion in the capitulations (*e.g.*, the English capitulations of 1086/1675, arts. 62-5).

B. Historical Survey.

(1) *Period of the Italian maritime states* (700/1300-977/1569).

The Seldjūḳ sultans of Anatolia had granted commercial privileges to the Kingdom of Cyprus and to the Venetians as early as 603/1207 (O. Turan, *Türkiye Selçuklulan hakkında resmî vesikalar*, Ankara 1958, 108-19, 121-37). The oldest *ʿahdnāme* text to survive dates from Dhu 'l-Ḳaʿda 616/January 1220 (Tafel and Thomas, i, 438, ii, 143; O. Turan, *op. cit.*, 124-37; for a French merchant in Konya in 1225, see Belin, 37).

When the Ottomans first entered Rumeli in 753/1352 [see GELIBOLU] they were in friendly relations with Genoa (then at war with Venice) and granted her the first Ottoman capitulations. Although this first text is lost, that of 19 Djumādā I 789/9 June 1387 has survived (Latin text in Silvestre de Sacy, *Notices et extraits*, xi/1, 59-61: cf. M. Belgrano,

in *Atti della Soc. Lig.*, xiii, 146-9). The oldest commercial concession to a Latin state made by a Turcoman prince of Anatolia is in the peace treaty of 1348 between the Holy League (the Papacy, Venice, the Knights of Rhodes, Cyprus) and the Aydîn-oghlu Khiḍr Beg (text in Tafel and Thomas, iv, 313); but as early as 711/1311 Rhodian merchants had been operating in the principality of Menteshe, (Heyd, ii, 36), and a commercial agreement was later concluded. Venetian consulates were established in the middle years of the 8th/14th century at Altoluogo (Ayatholuḳ) and Palatia (Balat) (Heyd, i, 545). When, under Bāyezīd I, these places came under Ottoman suzerainty, the Sultan confirmed these privileges and extended them to "all places under his rule, by sea and by land, in Anatolia and Rumelia" (text in G. M. Thomas, *Diplomatarium*, iv, no. 134). From the time when Edirne was occupied by the Ottomans (762/1361) Venice was attempting to obtain capitulations from the Sultan (I. Brătianu, *Études Byzantines*, Paris 1938, 167). In 786/1384 she was making diplomatic advances in order to procure permission to import grain from Ottoman territory and to establish a commercial settlement on Ottoman soil, preferably at Üsküdār opposite Ghalaṭa (Thomas, *Dipl.*, ii, no. 141; F. Thiriet, *Régestes*, i, 165). The peace treaty of 822/1419 mentions an agreement between Venice and Meḥemmed I's grandfather, *i.e.*, Murād I (Thomas, *Dipl.*, no. 172). Bāyezīd I used his power to permit or withhold grain exports as a political weapon against Venice (M. Silberschmidt, *Das Orient, Problem* . . ., Leipzig 1923). In the period of civil war after the battle of Ankara, Ottoman pretenders recognized the necessity to conciliate Venice. Süleymān Čelebi actively sought Venetian support (Iorga, *Notes*, i, 122), and in the peace agreement of 806/1403 for the first time granted important concessions to the members of the League (Venice, Byzantium, Genoa, the Knights of Rhodes) (text in Thomas, *Dipl.*, ii, no. 159). Mūsā Čelebi confirmed these at Phanar on 13 Djumādā I 814/3 September 1411 (Thomas, *Dipl.*, no. 164). There followed the agreements of 17 Shawwāl 822/6 November 1419 (Thomas, *Dipl.*, no. 172), 15 Dhu 'l-Ḥidjdja 833/4 September 1430 (*ibid.*, no. 182), and 25 Dhu 'l-Ḳaʿda 849/25 February 1446 (F. Babinger and F. Dölger, *Mehmed's II. frühester Staatsvertrag (1446)*, in *Or. Chr. Per.*, xv/3-4 (1949), 225-58).

Meḥemmed II, like his great-grandfather Bāyezīd I, pursued the policy of attempting to reduce the Italian colonists to the status of tribute-payers. Although the Ottoman-Venetian war of 867/1463-884/1479 was a blow to Venetian commerce, trade was not completely interrupted, and by the treaty of 4 Rabīʿ II 884/25 June 1479 (cf. A. Bombaci, in *BZ*, xlvii (1954), 298-319) and its renewal by Bāyezīd II (end of Dhu 'l-Ḳaʿda 886/January 1482, original in Archivio di Stato, Venice), Venice was permitted, besides the privileges formerly conceded, permission to trade with Kefe and Trabzon in the Black Sea. In 904/1498, before embarking again on war with Venice, the Ottomans granted a capitulation to the King of Naples (S. N. Fisher, *The foreign relations of Turkey* . . ., Urbana 1948, 61). In the Ottoman-Venetian treaty of 24 Ramaḍān 909/24 March 1503, the concessions were further extended (Marino Sanuto, v, 42-7; cf. Bonelli, *Il trattato* . . ., 363). These were renewed by Selīm I (16 Shaʿbān 919/17 October 1513) and Süleymān I (17 Muḥarram 928/17 December 1521) (Turkish originals in Archivio di Stato). It is noteworthy that by the treaty of 1 Djumādā II 947/2 October 1540 (L. Bonelli, *Il trattato* . . ., 332-3; W. Lehmann, *Der Friedensvertrag*, and now (Turkish text) T. Gökbilgin, in Belgeler, i/2, 121-8), the commercial privileges were extended, the Arab lands and Bosnia being included,—but Trabzon and Kefe were excluded. The hostile relations between Venice and the Ottomans in the years 978/1570-980/1572 facilitated the intervention of a new competitor in the Levant-France. Until this time Venice had enjoyed commercial predominance in the Levant, in Istanbul, and in Egypt. (For the later Venetian capitulations see Murād III, Turkish text, Süleymaniye Library, MS Esad Ef. 2362, 63-70; (Rabīʿ II 1004/December 1595) Belin, in *JA*, VIIe Série, viii, 384-442; cf. Noradounghian, i, 408-9).

With the Ottoman conquest of Syria and Egypt, the value of capitulations increased enormously. Selīm I renewed the capitulations granted by the Mamluk sultans to Venice (see B. Moritz, *Ein Firman des Sultan Selim für die Venetianer*, in *Festschrift Sachau*, 422 ff.) and the consul of the Catalans and the French (at Ghazza, in Rabīʿ II 923/May 1517; for the Italian and French texts of the terms as renewed by Süleymān I, see Charrière, i, 121-9). The suggestion that these more elaborate capitulations were the model for the capitulations later granted to the states of Western Europe (J. H. Mordtmann, *Die islamisch-fränkischen Staatsverträge*, in *Zeitschrift für Politik*, xi (1918) is an exaggeration: the Ottomans seem rather to have followed the practice of the Anatolian emirates.

The capitulation granted to the joint Catalan-French consul in Egypt was not in fact an instrument between states. In 943/1536, however, the King of France, seeking the profit from the close relations he had established with the Sultan, attempted to obtain a direct capitulation for France. The *traité* which his ambassador J. de la Forest drew up in discussions with Ibrāhīm Pasha (see Charrière, i, 285, introduction) was not confirmed by Süleymān (cf. Charrière, i, 293-4, art. 17)—and soon afterwards Ibrāhīm was executed (22 Ramaḍān 942/15 March 1536). This draft, as finally drawn up by de la Forest, bears the form of a treaty concluded between two equal parties: this is the sole example of such a "treaty" among the "capitulations" (all the others of which were granted as unilaterally conceded *ʿahdnāmes*), and has given rise to very varying interpretations by modern scholars (Belin, 59; M. Khadduri, *War and peace* . . ., 273; I. Soysal, in *TD*, iii/5-6, 78; H. J. Liebesney, 317). That the document remained only a draft is clear from Rinçon's letters sent from Istanbul (Charrière, i, 389, 396-7, 413-4); its text was discovered only in 1777 by the Comte de Saint-Priest in the papers of d'Aramon (see G. Zeller, *Une légende qui dure* . . ., in *Revue d'hist. mod. et contemporaine*, ii (1955), 127-32; and (in answer), M. E., *Les capitulations de 1535 ne sont pas une légende*, in *Annales E.S.C.*, xix (1964)).

(2) *Period of the predominance of the states of Western Europe* (977/1569-1188/1774).

The first authentic Ottoman-French capitulations are those of 7 Djumādā I 977/18 October 1569. Those attributed to the reign of Süleymān (Belin, 89) must be that sultan's renewal of the Mamlūk capitulations, which had been extended to embrace the whole Ottoman Empire (Charrière, i, 123). A new capitulation in 977/1569 became necessary through the accession of Selīm II and the imposition in Egypt of a measure which destroyed French commerce (see Ṣafvet, in *TOEM*, iii, 993, and the introduction to the capitulations). The King sent Claude du Bourg to Istanbul to regulate this affair (Charrière, iii, 64, note 1;

Mission diplomatique de Claude du Bourg, in *Revue d'Hist. Dipl.*, 1895), and he, without difficulty, obtained the *ʿahdnāme* (Turkish text in British Museum, MS Or. 9053, ff. 252-5; French text in Testa, i, 91-6), which the ambassador Noailles in 1572 called "le plus ample et avantageux traité qui jamais fut tiré du Levant" (Testa, i, 111). Since the Ottomans were in that year making preparations to attack Cyprus (in Venetian occupation), they were anxious for good relations with France. The capitulation was drawn up on the basis of the Venetian capitulations (cf. art. 16, and Charrière, iii, 91, note 1). The additional last article (17) incurred, according to Du Bourg (Charrière, *ibid.*), the protests of the Shaykh al-Islām and the jealousy of Venice. As a result of these concessions, French commerce in the Levant rapidly expanded, overtaking that of Venice and encouraging the merchants of several other European states to sail under the French flag in order to have a share in this prosperity. According to the capitulations of 989/1581, these foreign merchants were the English, Portuguese, Spaniards, Catalans, Sicilians, Anconans and Ragusans. At this period the Sultan recognized as capitulatary states only France, Venice and Poland (Turkish text of the Polish capitulations of 20 Shaʿbān 960/1 August 1553 published by T. Gökbilgin, in *Belgeler*, i/2 (1963), 128-30). As France began to fall under Spanish influence (981/1573), Ottoman suspicions of her were aroused, and in 983/1575, before the new sultan Murād III had renewed the French capitulations, the English merchants began to apply for capitulations for themselves (Wood, 7; the privilege granted to Jenkinson in 960/1553 (Hakluyt, v, 109) was never put into effect). Since the middle of the century, English merchants had been attempting to establish a trade route via Moscow, the Caucasus and Hormuz. This project being defeated by the Ottoman occupation of Ādharbāydjān (986/1578), they turned their attention once more to the Levant (W. Foster, *England's quest of Eastern trade*, London 1933, 21-71). Two enterprising London merchants, Osborne and Staper, sent their agent William Harborne to Istanbul, with a letter from Queen Elizabeth to the Sultan. Harborne acquired an *idjāzet-i hümāyūn* restricted to these three principals and permitting them to trade in Istanbul (Muḥarram 988/February-March 1580, text publ. by I. H. Uzunçarşili, in *Belleten*: xlii/51 (1950), 615, doc. 2). In his reply to the Queen (*loc. cit.*, doc. 1), Murād III conceded *amān* to the English merchants so long as "friendship and good faith" was maintained. This rapprochement between the sovereigns was prompted by political calculations directed against Spain (CSP, Venice, viii, Preface, pp. XXXIX-XLVI); economically too, the Ottoman authorities were attracted by the opportunity of buying English cloth more cheaply and acquiring raw materials like tin and steel which were required for making arms. By a letter of 4 Ramaḍān 987/25 October 1579, Elizabeth had asked that the trading concessions be extended to all her subjects (Eng. tr. from Latin, in Kurat, *Türk-Ingiliz*, 181) and since some statesmen in Istanbul were at that time pressing the importance of English friendship against Spain (Kurat, in *Köprülü armagani*, 308-15), a full *ʿahdnāme*, based on the French capitulations (see art. 19), was granted (Rabiʿ II 988/May 1580; the Turkish text published by Kurat, *Türk-Ingiliz*, 182-6, contains errors, and should be controlled by the text published by Uzunçarşılı (*Belleten*, 617-9), by the text in British Museum MS Or. 9053, ff. 248-50, and by the texts of later capitulations. The English text is dated June 1580, see Hakluyt, v, 178-83; cf. P. Wittek, in *Bull. of the Inst. of Historical Research*, xix/57 (1942), 121-39).

M. de Germigny managed however to procure the insertion into the renewed French capitulations of the clause that English merchants should, as before, sail under the French flag. Nevertheless Harborne, in the teeth of French and Venetian intrigue, obtained a new *ʿahdnāme* (Rabiʿ II 992/May 1583), and the Sultan sent the Queen a letter of confirmation (later in the same month, Kurat, *Türk-Ingiliz*, 187, doc. V).

Thus began a long commercial struggle between France and England in the Levant (Testa, i, 151-71; A. Horniker, *William Harborne and the beginning of Anglo-Turkish diplomatic and commercial relations*, in *J. Mod. Hist.*, xviii (1946)). France finally recognized the new state of affairs (capitulations of 1012/1604, art. 4), but there were more collisions because the Dutch preferred to sail under the English flag in their trade in the Levant. In the upshot, the Ottoman government granted the Dutch separate capitulations (7 Djumādā I 1021/6 July 1612; text in Dumont, *Corps diplomatique*, v/2, 205; see A. Ernstberger, *Europas Widerstand gegen Hollands erste Gesandtschaft bei der Pforte (1612)*, Munich 1956). As late as 1062/1652, however, France obtained the Porte's support for her claim that the merchants of every Christian nation which had no ambassador of its own in Istanbul must trade under her flag (Istanbul, Başvekâlet Arşivi, DHY, Françalu defterleri no. 26). In about 980/1572 Ragusa, claiming to be the tributary (*kharādj-güzār*) of the Sultan, shook off French protection (Testa, i, 101). The French succeeded for a long time in hindering the settlement of an English merchant-colony in Egypt (R. Fedden, *Notes on the British consulate in Egypt*, in *BIE*, xxvii (1946), 1-21). By a firman of Djumādā I 1054/July 1644, the Sultan forbade the English consul in Egypt to exact consular dues from Genoese and Sicilian merchants (Başvekâlet Arşivi, DHY, Françalu no. 26). But in the years between 1030/1620 and 1094/1683, the English managed to make themselves generally supreme in the Levant. Countries of the *dār al-ḥarb* preferred to have recourse to English protection, as being surer and less expensive. The Ottoman government, ignoring French protests, finally permitted *ḥarbīs* to sail under the protection of whichever power they wished.

As a result of the fierce competition between the European states, a "most favoured nation" clause began at this period to figure in capitulations (*e.g.*, the English capitulation of 1580, art. 19). Other new clauses too which the Western states caused to be inserted in their capitulations are a reflexion of the contemporary situation and pressures. In the new English capitulations obtained by Lello in 1010/1601 (Turkish text in Ferīdūn, *Munshaʾāt*, ii, 381-5) 17 new clauses appear (see Sanderson, *Travels*, London 1931, 282-7): the "most favoured nation" status of England is confirmed; the Dutch are put under the English flag (a defeat for the French); gold and silver currency are exempted from customs dues and permitted to circulate freely. This last clause is connected with the trade in silver currency, which was then an important economic question (see H. Inalcık, in *Belleten*, xv/60 (1951), 656-61). Another important clause was that subjecting the English to a customs due of only 3% *ad valorem* on goods they brought in from Venice and other places: this encouraged other nations, subject to a 5% rate, to ship their exports under the English flag. In a later renewal, a clause was inserted to combat the misuse of bills of exchange (Noradounghian, i, 165, art. 58).

In Djumādā II 1086/September 1675, during the embassy of John Finch, a new capitulation was drawn up embracing all the earlier privileges and the *khaṭṭ-i sherīf*s granted over the years (G. F. Abbott, *Under the Turk* ..., London 1920). The chief articles then added (Noradounghian, i, 167-8, arts. 72-5) concerned the prohibition of excessive dues on woollens and silk—these being the principal export wares of the English merchants at Smyrna, so that the dues were causing disputes. Finch attempted at the same time, but in vain, to procure for his King the title Pādishāh, which the French King had enjoyed since 1014/1603 (Ferīdūn, ii, 400). Finch's capitulation aroused the jealousy of the French and the Venetians (Abbott, 147).

The French capitulations and their effectiveness varied in the 11th/17th century with changes in Ottoman-French political relations. The renewals under Meḥemmed III (1005/1597; text in P. de Rausas) and Aḥmed I (1012/1604; text in Testa, i, 141-51; Noradounghian, i, 93-102; Turkish text in Ferīdūn, ii, 400-4) fell in a period of warm relations, so that the French were able to obtain some important new articles (F. S. de Brèves, *Relation* ..., Paris 1630; analysis of the articles in Belin, 84-9; J. de Gontaut-Biron, *Ambassade en Turquie* ..., *1605-1610*, 2 vols., Paris 1888-9). In the former, the most important clauses provided for all "nations" except the Venetians and English to sail under the French flag; for the export of grain; for freedom of trade in silver coin (for a ferman on this subject, see Başvekâlet Arşivi, Fekete tasnifi no. 2396); for guarantees against Barbary corsairs (arts. 1, 4, 8). The latter conceded French protection of Christian pilgrims to Jerusalem and of monks dwelling there (arts. 4, 5)—clauses which laid the foundation for the later French claims to protect all Catholics and Catholic missionaries in the Ottoman Empire. In 1028/1619, the attempt of the Comte de Césy to renew the capitulations failed (Tongas, 20), and henceforward the influence of the French at the Porte and in the markets of the Levant began to decline (Masson, i, 124-30; Tongas, 139-215). The Porte granted a separate capitulation to Genoa, hitherto under the French flag, and reduced their custom dues to 3% (1076/1665; Chardin, *Voyages*, i, Amsterdam 1711, 6-17; It. text in Noradounghian, i, 124-32). In the period when the Köprülüs were in power, political relations with France were for a time suspended, and French trade fell to a tenth of what it had been in 1029/1620 (Masson, i, XXXI; Tongas, 5-65). Finally, as part of Colbert's efforts to revive the Levant trade, the French managed to renew their capitulations in 1084/1673, with important new clauses (Turkish text in *Muʿāhedāt medjmūʿasī*, i, 4-14; Fr. text in Noradoughian, i, 136-45; a letter of Meḥemmed IV relating to the *ʿahdnāme* in Testa, ii, 169; for the negotiations, see A. Vandal, *Les voyages du Marquis de Nointel*, 1670-1680, Paris 1900, 99-112). The most important new clauses conceded reduction of customs dues to 3%, "most favoured nation" treatment, and the French right to protect Jesuit and Capucin missionaries at the Porte.

From 1094/1683 onwards, when the Ottoman Empire in Europe was beset by dangers and the Porte needed diplomatic support from Western powers, the institution of the capitulations entered a new stage. Henceforward, new privileges were granted as an unveiled gesture of reciprocity for political assistance. By a *khaṭṭ-i sherīf* of 1101-1690, the French won the reduction of customs dues in Egypt from 10% to 3%, and the return to the Catholics of various sacred sites in Jerusalem (Paris, *Hist. de Marseille*, 89-90). When France made peace with the Habsburgs in 1109/1697, the Porte turned to England: the English were granted the monopoly of the carrying trade by sea between Egypt and Istanbul, and an English consulate was opened in Egypt (Fedden, *op. cit.*, 13-14). A rapprochement with France between 1128/1716 and 1153/1740 changed the picture again: the Marquis de Villeneuve, who acted as intermediary in the negotiations leading to the Treaty of Belgrade (1152/1739) and brought his sovereign's guarantee of it (see A. Vandal, *Une ambassade française en Orient sous Louis XV* ..., Paris 1887), obtained the most extensive privileges yet conceded (1153/1740; Turkish text in *Muʿāhedāt medjmūʿāsī*, i, 14-35; Fr. text in Testa, i, 186-210; Noradounghian, i, 277-300). The Sultan even confirmed these capitulations on behalf of his successors (cf. the Prussian capitulations of 1174/1761 in *Muʿāhedāt medjmūʿasī*, i, 90). The Ottoman government thus sacrificed the valuable bargaining counter that new capitulations had to be negotiated at the beginning of every new reign. The new clauses contained nothing of great substance. In the following years the French held an unchallenged position in Levant trade and in transportation between Ottoman ports (see R. Paris, 93-109). Each state of Europe which was enjoying any degree of economic development was now forming a Levant Company and attempting to obtain capitulations from the Porte. The Ottomans responded, following a policy of weakening the privileged position held by France, England and Holland (Sweden: 1149/1737, text in Noradounghian, i, 239, Turkish text in *Muʿāhedāt Medjmuʿasī*, i, 146; the Kingdom of the Two Sicilies: 1153/1740, text in Noradounghian, i, 270; Denmark: 1170/1756, Fr. text in Noradounghian, i, 308, Turkish text in *Muʿāhedāt medjmūʿasī*, i, 52; Prussia: 1174/1761, Fr. text in Noradounghian, i, 315, Turkish text in *Muʿāhedāt medjmūʿasī*, i, 83; Spain: 1197/1783, Turkish text in Djewdet, *Taʾrīkh*², ii, 338-43 and *Muʿāhedāt medjmūʿasī*, i, 212, Fr. text in Noradounghian, i, 344). In granting these capitulations the Porte was swayed chiefly by the political aim of acquiring friends in Europe (see especially the account of the Spanish negotiations in Djewdet, ii, 184-203).

The new stage had been fully entered when the supremacy of the Western nations in the Levant was threatened by the reluctant concession, under pressure, of capitulations to the Habsburgs and to Russia —to the Ottoman Empire's two powerful enemies.

(3) *The capitulations as an instrument of European imperialism.*

As early as the middle of the 9th/15th century, German merchants from Augsburg and Nurenberg had been active, under Venetian protection, in Instanbul (see H. Kellenbenz, *Handelsverbindung zwischen Mitteleuropa und Istanbul*, in *Studi Veneziani*, ix, 193-9). Customs documents also attest the import of cloth overland from Breslau into Ottoman Hungary (L. Fekete and Gy. Káldy-Nagy, *Rechnungsbücher türkischer Finanzstellen in Buda* (*Offen*), Budapest 1962, 730). By the truce conceded to the Emperor Charles V and Ferdinand in 954/1547, merchants were permitted to travel back and forth enjoying *emn u amān* (Ferīdūn, ii, 340 and 341). At the renewal of the Treaty of Zsitva-torok in 1025/1616 (Ferīdūn, ii, 324; *Muʿāhedāt medjmūʿasī*, 75, arts. 9-10; Latin text in Noradounghian, i, 113-8), merchants owing allegiance to the Emperor, Austria, Spain and Flanders were permitted to travel and

trade, with a customs rate of 3%; furthermore, Jesuit priests were allowed to reside in Ottoman domains and maintain churches (art. 7). In 1078/1667 Austria sought to take an active part in Levant trade by founding a trading company (H. Hassinger, *Die erste Wiener Handelskompanie, 1667-1683*, in *Viertelj. für Soz. und Wirtschaftsgeschichte*, xxxv/1 (1942), 53). In the upshot, hostility between the two empires prevented these commercial privileges from being effectively exploited. Although by the Treaty of Carlowitz of 1111/1699 (art. 14) the Ottomans agreed to extend the capitulations granted to other European nations to the nations subject to the Habsburg Emperor, the latter obtained full capitulations only after the Treaty of Passarowitz (1130/1718: Fr. text in Noradounghian, i, 220-7; Turkish text in *Muʿāhedāt medjmūʿasi*, iii, 112-20). By these, ships were allowed to navigate freely on the Danube—but not to enter the Black Sea (art. 20); the Emperor could establish a consulate wherever another state had a consulate and wherever else he thought fit; Austrian and Persian merchants were permitted to trade via the Danube and the Black Sea, subject to a customs rate of 5%. It is noteworthy that no oath figures in these capitulations. Trade with Germany expanded, via the Danube, but mainly via Trieste and Venice (H. Grenville, *Observations*, ed. A. S. Ehrenkreutz, Ann Arbor 1965, 54). These capitulations were renewed in 1160/1747 (Turkish text in *Muʿāhedāt medjmūʿasi*, iii, 135-42), the Emperor obtaining the concession that merchants from the Grand Duchy of Tuscany, Hamburg and Lübeck should travel under his flag (as had Genoese merchants since 1137/1725). Rivalry with Russia prompted Austria to exact new clauses and a *sened* guaranteeing that they would be honoured (1198/1784, Fr. text in Noradounghian, i, 379-82, Turkish text in *Muʿāhedāt medjmūʿasi*, iii, 152-5); these clauses included the right to establish consulates in Wallachia and Moldavia, the same right of navigation by sea (including the Black Sea) and by the great rivers as Russia enjoyed, and the acknowledgement that an Austrian passport alone was a sufficient authority for a traveller.

In the 9th/15th century Russian merchants were trading at Azak (Azov) and Kefe, and by the end of the century their presence is recorded in Bursa (in 903/1497, Ivan III sent his ambassador Pleshčeyev to Istanbul, to seek facilities for them). They travelled as individuals, either with a personal *idhn-i hümāyūn* or by *istiʾmān* from Muslim merchants (for an example, see F. Dalsar, *Bursa'da ipekçilik*, Istanbul 1960, p. 191). After the Czar's occupation of Kazan (959/1552), the great market for furs, commercial relations expanded, the Sultan sending merchants attached to the Palace to Moscow to buy furs (see, *e.g.*, Dalsar, 192-3), and the Czar's merchants coming to Bursa, with individual permits, to buy silkstuffs. In the Treaty of Istanbul of 1112/1700 the question of trade privileges was left for later discussion (art. 10), but a special article (12) permitted Russian monks to make the pilgrimage to Jerusalem. Article 9 of the Treaty of Belgrade (1152/1739) permitted freedom of trade to merchants of both parties, but with the proviso that goods should be carried in the Black Sea only in Turkish vessels. By the Treaty of Küčük Ḳaynardja ([*q.v.*], 1188/1774), the Porte conceded to Russia, as it had to Western nations, freedom of navigation in Ottoman waters, explicitly including the Black Sea, the Straits and the Danube. Russian merchants coming by sea or land were to receive "most favoured nation" rights, all the terms of the English and French capitulations were granted to Russia, and the Czar was permitted to set up consulates and vice-consulates wherever he wished. Other clauses granted further privileges with regard to criminals (art. 6), diplomatic immunities of ambassadors and dragomans (arts. 5 and 9), and the protection of Christians (arts. 7, 8 and 14); and finally, the Czar was granted the title Pādishāh (art. 13). Since all these privileges were embodied in a reciprocal and bilateral "treaty" (in the modern sense), they differed both in form and in legal character from the *ʿahdnāme*s unilaterally granted by the Porte to France and England—and indeed when five years later the Porte attempted to restrain ships carrying to Russia provisions required for supplying Istanbul, Russia regarded this as a "violation of the treaty" (*naḳḍ-i ʿahd*: Djewdet, ii, 135). The establishment of Russian consuls in such sensitive areas as Wallachia, Moldavia and Sinop led to tension (Djewdet, ii, 144; iii, 125-7). The Porte indeed still evidently regarded capitulations as concessions freely granted to the subjects of friendly powers—but Russia now began to put on the pressure: in the explanatory convention of Aynalî Ḳavaḳ (1193/1779: Turkish text in *Muʿāhedāt medjmūʿasi*, iii, 275-84; Fr. text in Noradounghian, i, 338) the construction of Article II of the Treaty of Küčük Ḳaynardja was reviewed, and it was repeated (art. 6) that it was a mutual engagement which could not be unilaterally denounced. Finally, on occupying the Crimea, Russia forced the Porte to recognize the annexation and to grant a full capitulation of 81 clauses "on the basis of the capitulations granted to the French and the English" (1197/1783: Turkish text in *Muʿāhedāt medjmūʿasi*, iii, 285-319; French text in Noradounghian, i, 371-3). In the preamble and the conclusion it was stated that this *ʿahdnāme* was a pact supplementary to the Treaty of Küčük Ḳaynardja.

This instrument was to lend a new character to the Porte's capitulatory agreements with Western powers: in particular, they reacted to the opening of the Black Sea to Russian ships, and at first, hoping to expand her trade, Russia encouraged them (Wood, 180-1). Since the 10th/16th century the English (Wood, 49; Grenville, 49-54) and the French (Masson, ii, 637-55; R. Paris, 455) had repeatedly —but in vain—attempted to obtain entry into the Black Sea; when Russia was now granted this right, they asked the same concession for themselves, on the basis of the "most favoured nation" clause in their capitulations. But this was not granted immediately; the English obtained it in a "note" of 1214/1799 (text in Noradounghian, ii, 35-6) and France by art. 2 of the Treaty of Paris (1217/1802: text in *Muʿāhedāt medjmūʿasi*, 36; for the negotiations, see I. Soysal, *Fransız Ihtilâli ve Türk-Fransız münasebetleri*, 1789-1802, Ankara 1964, 315-37); the same right was later granted to other powers (Sardinia, Denmark, Spain, the Two Sicilies, Tuscany; see Noradounghian, ii, 102, 137, 140, 219).

(4) *Abuse of the Capitulations and attempts to abolish them.*

Until the end of the 12th/18th century the Ottoman state in its dealings with the mercantilist nations of Europe continued to adhere to its traditional attitude in commercial matters and granted generous privileges, based on the concept of *amān*, without considering the dangerous results which might ensue. In about 1771 Porter considered (*Observations*, 357-464) that it was hardly possible to ask for more to be conceded. An expert on the Levant trade recognized (Masson, i, 473) that the Ottoman state afforded "toute la securité et toutes les facilités necessaires";

he observed also that the Europeans abused these privileges in the most outrageous ways. The growing exploitation had, in the last years of the century, brought the Ottoman Empire to a position of political and economic subordination to Western Europe, so that the French ambassador Choiseul-Gouffier could in 1788 call the Ottoman Empire "une des plus riches colonies de la France" (Masson, ii, 279). Before the 18th century, these privileges presented no great threat to the Ottoman state and its economy, the Ottoman government still being powerful enough to prevent abuses; but now the European states used pressure and threats towards the weakened Ottoman state in order to maintain and extend the concessions, and managed to obstruct the correction of abuses.

The abuse which really undermined the Empire was the extension of capitulatory rights to *dhimmī* subjects of the Porte. The *musta'min* from a *ḥarbī* land enjoyed greater privileges than an Ottoman subject; and some *dhimmīs* hit on the method of winning these privileges for themselves, namely, to obtain from the Porte, through the bribing of foreign ambassadors and consuls, patents of appointment (*berāts*) as dragomans. By the capitulations, ambassadors and consuls had the right to employ a stipulated number of dragomans, and by the *berāt* granted to such a dragoman (for specimens, see Başvekâlet Arşivi, DHY Ecnebi defterleri; London, Public Record Office, SP 105/334) the Sultan exempted both the bearer and his sons and servants from poll-tax (*djizya*) and the other taxes to which the *ra'āyā* were liable. In the 11th/17th century, the Western nations obtained also various diplomatic immunities for their dragomans (see, *e.g.*, art. 45 of the English capitulation of 1086/1675: *Mu'āhedāt medjmū'asi*, i, 251; Noradounghian, i, 157). Ambassadors and consuls began—for a consideration—to procure such *berāts* for *dhimmīs* who had no pretensions at all to be dragomans, and so to make quite large sums. These *berātlīs* [*q.v.*], or "*barataires*" and their servants ("*sous-barataires*"), who enjoyed the same privileges, had the same financial and juridical advantages as the *musta'mins*, and paid the same lower customs duties. In 1208/1793, in Aleppo alone, some 1500 *dhimmī* merchants held dragomans' *berāts*—only six of whom, when a check was made, proved to be genuine interpreters (*Kisbī ta'rīkhi*, *apud* Djewdet, vi, 130. For the check carried out in Salonica in 1178/1764, see Svoronos, 152; for further checks in 1200/1786 and 1221/1806, see Djewdet, iii, 130, 270, viii, 107).

This was not the only abuse. A capitulary power had also the right to extend the privileges arising from the capitulations to "protected persons" who were not its own nationals, so that an Ottoman subject needed only to obtain a *patente* from a compliant ambassador or consul to enjoy the privileges accorded by capitulation to foreigners. In about 1223/1808 the Russians had enrolled 120,000 Greeks as "protected persons" (for the "barataires" and "protégés" see especially F. Rey, *La protection diplomatique et consulaire dans les Échelles du Levant et de Barbarie*, Paris 1899). During the reign of Selim III Ottoman statesmen united in a general reaction against the capitulations, and various measures were taken to rescue Ottoman subjects from the *un*privileged status to which they had fallen. Thus by a *berāt* granted in 1207/1792, a *dhimmī* merchant and his two assistants who traded with Europe were granted "all the privileges and exemptions enjoyed by the dragoman of a *müste'min* and his servants" (see 'O. Nūrī, *Medjelle-i umūr-i belediyye*, i, 675-8). Such merchants were called "*Avrūpā tüdjdjārī.*" Shortly afterwards some Muslim merchants trading with Persia and India were, by *berāt*, granted the same privileges (*op. cit.* 681-5), and called "*Khayriyye tüdjdjārī*". Their affairs were regulated by a special administrative system and a special court.

The *a'yān*, local despots who at this period were rising to power in various provinces of the Empire (in Palestine, Shaykh Ẓāhir and later Djazzār Aḥmad Pasha; in Egypt, Meḥmed 'Alī; in Rumeli, Tepedelenli 'Alī Pasha [*qq.v.*]), with an eye on the benefits for their own treasuries, struggled effectively against the evil effects arising from the abuse of the capitulations by such measures as forbidding the export of certain goods, imposing monopolies and farming the sale of monopoly wares, fixing the prices of wares for export and abolishing the rights of navigation enjoyed by *musta'mins*. The central government too began increasingly to use the devices of monopoly (*yed-i wāḥid*) and *iltizām* [*q.v.*] of export goods in order to increase revenue. This was an old principle, entirely within the competence of the government. Again, the internal customs duties and other dues levied on internal commerce were matters outside the purview of the capitulations. Nevertheless, in about 1830 the Western powers, and principally England, in the new circumstances created by the Industrial Revolution, were feeling the need that the markets of the Levant should become still more accessible, secure and stable. By exploiting a political crisis England succeeded in this aim through the Convention of Balta Liman of 1254/1838 (text: Great Britain, Parliamentary Papers, 1830, 291-95; Noradounghian, ii, 249 and note at p. 254; V. J. Puryear, *International economics and diplomacy in the Near East*², 1969, 117-26). This commercial treaty not only confirmed for ever all existing capitulary privileges (art. 1) but imposed customs duties *ad valorem* of 3% on imports and 9% on exports (art. 4). This 9% duty represented a rate imposed as compensation for the various duties collected on internal trade, and thus closed one of the loopholes through which the Ottoman government could exercise its freedom in customs' policy. Furthermore, the English obtained the abolition of the old limitations on their freedom of movement within the Empire (the need for safe-conducts and travelling-passes, etc.) and of the monopolies: in internal trade they were to enjoy the status of the "most favoured" Ottoman subjects, and could both export and also sell freely within the Empire the goods which they bought. This agreement was followed by others concluded with the other capitulary nations (Noradounghian, ii). These changes made the Ottoman Empire an entirely open market just at the time when European mechanised industry was seeking outlets for its products. In the next ten years, local industry collapsed (Ö. C. Sarç, *Ottoman industrial policy*, in Ch. Issawi (ed.), *The economic history of the Middle East*, London and Chicago 1966, 46-60).

One of the basic causes of the Crimean War was Russia's claim, based on a distortion of an old capitulation privilege, to extend her protection over all Orthodox Christian subjects of the Ottoman Empire. To counter this, 'Ālī Pasha maintained at the Paris peace congress (1856) that since the Ottoman Empire had now joined the European comity of nations, it should be treated according to the rights of nations recognized among them—and hence the capitulations (*'uhūd-i 'atīḳa*) should be abolished. It was agreed that the question should be examined at a separate

conference, to be convened in Istanbul (L.-J.-D. Féraud-Giraud, *De la juridiction française dans les Échelles du Levant et de Barbarie*, Paris 1866, ii, 54-8). This news was taken very seriously in Istanbul (A. Fu'ād, *Ridjāl-i mühimme-i siyāsiyye*, Istanbul 1928, 70), but the powers never met: in 1861 and 1862, when the commercial treaties were renewed (Noradounghian, ii, 130-91), the capitulations were re-affirmed in their entirety, and a few modifications were made only in customs rates [see MAKS]. The statesmen of the Tanẓīmāt generation now believed firmly that the first and essential step in the recovery of the Empire was to win freedom from the capitulations. With this aim in view, while taking fundamental measures of reform in the Westernization and secularization of the administration and the legal system, they also sought methods of suppressing at least the worst abuses of the capitulations. By a firman of 1284/1867 (text in Testa, vii, 745-7; Aristarchi, i, 19-21; Turkish text in *Dustūr*, i, 230), while foreigners were granted the right to own property, it was also decreed that they should be subject to the same conditions as Ottoman subjects, pay the same taxes, and be answerable to Ottoman courts of law. The French ambassador commented that this new privilege "ensured to European capital the right to develop unlimited mineral, agricultural and forestry riches of the Ottoman Empire" (*La Turquie* (newspaper), issue of 12 September 1868). The powers complained that the old exemptions bestowed by the capitulations were not included, but finally accepted these terms (text in Testa, vii, 730-3; for Ziyā Pas̲h̲a's objections to this new privilege, see *Tanzimat*, i, Ankara 1940, 835-6). At the end of the document the Porte expressly stated that it reserved the right to alter the *ʿuhūd-i ʿatīḳa, i.e.*, the capitulations. ʿĀlī Pas̲h̲a at one point (1867) considered adopting the French civil code in order to do away once and for all with the objections of the European powers (R. Davison, *Reform in the Ottoman Empire*, Princeton 1963, 252). Right down to the Republican period the desire to abolish the capitulations was the principal motive for various radical reforms and, in particular, efforts at secularization.

By his law on Ottoman nationality of 1869, ʿĀlī Pas̲h̲a hoped to put an end to one of the gravest abuses of the capitulations (Turkish text: *Dustūr*, i, 16-18; French text: Testa, vii, 526-7), by enacting that a purported change of nationality was void without the approval of the Ottoman government. This provision too the powers were obliged to accept. A little later, in a memorandum circularized to the powers (Testa, vii, 548-54), ʿĀlī Pas̲h̲a, while recognizing that the capitulations bore the character of a "*traité*", drew to their attention the principal points which were abused, maintaining that these abuses were contrary not only to the "law of nations" but indeed to the terms of the capitulations themselves, and that the Ottoman government was obliged to see them rectified. The principal abuses were: the status of the "protected persons"; exemption from the taxes owed by Ottoman subjects; the extraterritorial status of consuls; the difficulty in prosecuting foreign criminals; the fact that foreigners were not answerable to Ottoman law and civil courts, which their own governments did not recognize; the interference of consular courts in the affairs of Ottoman courts; the dragoman's claim to take part in the Ottoman judge's decision (see J. de Testa, *Observations sur le mémoire de la Sublime Porte relatif aux capitulations*, Istanbul 1869). This memorandum had followed a Code of Regulations (*niẓāmnāme*) on Consuls (1863: text in Aristarchi, iv, 15-19) and a Protocol (*maẓbaṭa*) on the investigation of foreign criminals (1867); but the powers would permit no modifications on the points of internal taxes, the presence of dragomans in the courts, and the opening of mission schools without the permission of the Sultan, etc.

The other powers were gravely offended when, during the negotiations for the renewal of the commercial agreements in 1890, Germany agreed to the abolition of the capitulations,—but she had made this subject to the agreement of the other powers. The capitulations were now weighing even more heavily on the Ottoman Empire because the European powers were extending their fields of activity and extending their capitulary privileges into them, so that the Empire now had no better than a semi-colonial status. Banks, railways, mines, gas and electricity, port installations, ports and telephones—indeed all the important public services—were now in the hands of privileged European companies (see N. Verney and G. Dambmann, *Les puissances étrangères dans le Levant*, Paris 1900; C. Morawitz, *Les finances de la Turquie*, Paris 1902). Behind this abuse of the capitulations and the activities of missionary societies lay the threat of the political and military pressure which an imperialist state could bring to bear. Public opinion in Turkey, at last awake to the dangers, was now violently hostile to the capitulations. From 1908 onwards, every government placed their abolition at the top of its programme (C. Bilsel, *Lozan*, i, Istanbul 1933, 63). In two memoranda which he delivered to the British government in May 1913, the Grand Vizier Ḥaḳḳī Pas̲h̲a proposed some urgent modifications, such as the raising of customs' duties to 15%, the abolition of foreign post-offices, the imposition of a profits tax on foreigners, and the setting up of a commission of lawyers to carry through the complete abolition of the capitulations. Great Britain claimed that for these the agreement of all the powers would be necessary and that the commercial and financial regulations concerned not the capitulations but the recently concluded commercial treaties (*British documents on the origins of the War*, x/2, docs. 64, 80, 95, 97). With the outbreak of the First World War the Ottoman government took up the abolition of the capitulations with the British, French and Russian governments as a principal matter determining her attitude towards maintaining neutrality—but the Allies would make no clear promise (Y. H. Bayur, *Türk Inkilabı tarihi*, iii/1, Ankara 1957, 156-62). Thereupon, by a firman of 17 S̲h̲awwāl 1332/8 September 1914, the Sultan proclaimed the abolition of "all the existent foreign privileges known as financial, economic, juridical and administrative capitulations, so that foreign nationals resident in the Ottoman Empire would be treated in the framework of the general law of nations" (Bayur, *op. cit.*, iii/1, 162; text of the note to the Powers: Bilsel, *op. cit.*, 65-7). Immediately thereafter there was promulgated the "Code of Regulations concerning the separation of *s̲h̲erʿī* courts and *niẓāmī* courts". The capitulary states protested, denouncing this action as a unilateral and arbitrary abrogation of treaty rights. By the Treaty of Sèvres the capitulations were restored without modification and their privileges were extended to the other victorious allies; but by the Treaty of Lausanne (24 July 1923) the allies were obliged to accept their complete abolition.

Bibliography: I. Archive material: The most important Ottoman source is the series of 106 *Ecnebi Defterleri* in the series *Divan-i Hümayun*

Defterleri, containing copies of documents relating to the capitulations with European states for the 11th/17th century and after; from 1111/1699 the *Name-i Hümayun defterleri* contain copies of *ʿahdnāmes*; for the 19th century, important material is to be found in the series *Mukavelename defterleri*, *Imtiyaz defterleri*, *Mukteza defterleri*, *Izn-i sefine defterleri*, *Kilise defterleri*, *Şehbender defterleri* and *Gümrük defterleri*. European archive-collections also contain original Ottoman documents on the subject, particularly the Archivio di Stato, Venice, for which see A. Bombaci, *La collezione di documenti turchi dell' Archivio di Stato di Venezia*, in *RSO*, xxiv (1949), 95-107; for the British archives, see A. N. Kurat, *Ingiliz devlet arşivinde ve Kütüphanelerinde Türkiye tarihine ait bazı malzemeye dair*, in *AÜDTCFD*, vii (1949), the important series being PRO SP 105/216 and 105/334. The very extensive material in Western languages in the French archives has been used by P. Mason, A. Vandal, Ch.-Roux, E. Charrière, G. Tongas, V. Svoronos and R. Paris. Documents in English have been used by A. C. Wood, *A history of the Levant Company*, repr. 1964, see pp. IX-XII.

iii.—PERSIA

During the seventeenth and eighteenth centuries European trade was carried out in Persia under the protection of farmans given by different s̲h̲āhs to individuals and companies. These were sometimes of a general nature and sometimes included the grant of privileges and immunities. Those who sought the grant of such farmans and the s̲h̲āhs who gave them may well have been influenced by the negotiations for the grant of extra-territorial privileges to French subjects in the Ottoman empire in the first half of the sixteenth century (see J. C. Hurewitz, *Diplomacy in the Near- and Middle East, a documentary record: 1535-1914*, Princeton 1956). In 1566 and 1568 S̲h̲āh Ṭahmāsp gave the Muscovy Company farmans in which he accorded them exemption from tolls and customs, freedom of travel throughout the country, protection for their merchants "from all evil persons", legal recovery of just debts, immunity from robbery,

permission to build or buy houses for their own use, and assistance in unloading (texts in Hurewitz, *op. cit.*, i, 6-7). Political and other events prevented the successful prosecution of trade by the Muscovy Company, and after a sixth expedition to Persia in 1579-81 efforts to conduct trade via the Russian route were abandoned. In 1009/1600 Antony Sherley obtained from Shāh ʿAbbās a farman permitting all Christian merchants to trade in Persia without molestation and granting them immunity as to their persons and goods from Persian courts, legal recovery of debts, and exemption from tolls and customs (text in Hurewitz, *op. cit.*, i, 15-16).

Some years later, in 1623, Shāh ʿAbbās gave a farman to the Dutch East India Company giving freedom of trade and immunity from inspection of their goods to the Netherlands nation and exemption from all duties, tolls, and charges, with the exception of the duty paid to the *nāẓir* (inspector). Article 10 stated that "the house of the Netherlands Nation in Persia shall enjoy full freedom without exception; and no justice may enter [the premises] without the permission of the principal representative of the said Nation; and if anyone should seek forcibly to enter [the premises], the Netherlanders will be allowed to resist him with force". Article 14 laid down that "If a member of the Netherlands Nation should (God forbid) strike dead another person, from whatever nation, or should commit any crime or infraction of the law, that person shall not be tried by any justice of the [Persian] Empire but shall be punished by his president or chief, according to the circumstances of the case and in the manner deemed appropriate". Article 17 accorded to the interpreter or dragoman of the Netherlands house the same privileges as a member of the Netherlands Nation (text in Hurewitz, *op. cit.*, i, 16-18). New farmans were granted in 1642 and 1694. On 7 February 1631 a Dutch agent of Shāh Ṣafī obtained a grant of extra-territorial privileges for Persian merchants in the Netherlands. This instrument was on the pattern of contemporary arrangements prevailing between European nations (text in Hurewitz, *op. cit.*, i, 20-21). In fact, it did not become operative because Persian merchants did not become established in the Netherlands.

In October 1615 the English East India Company obtained a farman in general terms from Shāh ʿAbbās. Two years later, in 1617, Edward Connock obtained a farman framed in more specific terms, which was confirmed by Shāh Ṣafī in 1629. It granted freedom of trade and creed and the right to pay the same rates of customs as paid by Persian subjects. English subjects, in the event of their committing disorders, were to be punished by their own ambassador. If any difference arose between English subjects and Persian in buying and selling "if the said differences pass or exceed twenty tomands, the Justice shall send them to the Ambassador to be decided, that he in the presence of our Justices might do whatsoever shall be conformable to honourable and noble laws" (text in Hurewitz, *op. cit.*, i, 18-20). This farman was confirmed by Shāh Sulaymān and renegotiated with Shāh Sulṭān Ḥusayn by James Bruce in (or about) 1697 (India Office Records, E/3/52/6410. See further R. W. Ferrier, *British-Persian relations in the 17th century*, unpublished Ph. D. thesis, Cambridge 1970, 455 ff. See also *Calendar of State Papers*, colonial, Vol. IV, No. 852, E/3/12/1294, and *ibid.*, No. 857, E/3/12/1296).

The French in February 1665 and December 1671 obtained farmans giving French merchants trading privileges comparable to the English and the Dutch. On 7 September 1708, however, a treaty was concluded between Shāh Sulṭān Ḥusayn and Louis XIV. By this, French merchants were accorded freedom to travel and trade throughout Persia and immunity from certain import duties for five years on the grounds of the considerable sums they would have to expend to launch commercial relations between the two countries (Art. 2). They were given permission to buy or build houses or hostels for their lodging (Art. 4), and to fly the French flag over these buildings in the same manner as other Europeans flew their flags over their buildings (Art. 5). French subjects and merchants, and other Europeans with them, their interpreters, household servants, Armenians, and Indians in their retinue, up to twenty persons, were exempted from tribute and *kharādj* (Art. 11). According to Article 16 differences between French subjects were to be settled according to French law; in the event of differences between Frenchmen and other nations, Persian officials were to establish the truth of the matter in the presence of the consul and "settle it in conformity with Muslim justice and universal truth". Agreement was given to the appointment of a factory chief, captain, or consul in any Persian port (Art. 23). If a complaint was brought against a Frenchman, the plaintiff was to refer his complaint to the governor of the locality, who would summon the consul's interpreter and send him to the consul to settle the differences; but if the consul was otherwise engaged, after a reasonable delay the case might be settled by the Persian authorities (Art. 24) (text in Hurewitz, *op. cit.*, i, 32-8).

On 13 August 1715 the treaty was emended. French subjects were exempted from the payment of import and export duties (Art. 2). All Frenchmen and their servants and slaves without limit were granted exemption from capitation tax, *kharādj*, and all other tributes and duties mentioned in Article 11 of the Treaty of 1708 (Art. 6). Some changes were also made in the provisions governing the investigation of civil and criminal suits. Article 10 stated that civil and criminal differences that might arise between Frenchmen and members of another nation would be investigated and decided by the officers of Muslim justice in the presence of the consul of the French nation or such other person as he might commission. Differences which might arise between the consul or the interpreter of the French nation and persons of another nation would be decided by the king of Persia himself. The governors of the locality might not take formal cognizance of such cases nor might they, in any case, affix their seal upon the houses where the Frenchmen lived.

By Article 1 of the separate articles negotiated in 1715 Persian merchants were accorded "the same privileges and exemptions as the merchants subjects of His Very Christian Majesty, on condition, however, that they may not bring to France any goods whose entry is forbidden, that they will use French ships to transport the permissible goods; and that all the goods will be the products of the states of the King of Persia, proved by a certificate that they will arrange to obtain from the Consul of the French nation". Article 2 gave Persian merchants the right to have a consul in Marseilles who would enjoy exemption from capitation tax. By Article 3 he was given the sole right to decide any difference arising between Persian merchants, but the investigation and decision of differences arising between Persians and members of other nations was to belong to the judge of the locality (text in Hurewitz, *op. cit.*, i, 40-2). Thus, both in the case of the Netherlands and France

there was, at least in theory, some degree of reciprocity in the arrangements made.

In 1722 the Ṣafavid dynasty was brought to an end by the Afg͟hān invasion. Trade came largely to a standstill in the prevailing anarchy, and was only spasmodically renewed during the rest of the eighteenth century. The privileges granted to Europeans under the Ṣafavid farmans lapsed.

By a treaty of 21 January/1 February 1732 between Persia and Russia, Ṭahmāsp, the Ṣafavid puppet put on the throne by Nādir Ḳulī Mīrzā (later Nādir S͟hāh), undertook to allow Russian subjects to trade freely in Persia without payment of duty on merchandise brought from Russia to Persia for sale or barter, and to permit Russian merchants to build houses and stores to hold their merchandise (Art. 3). The Russian empress for her part promised that the subjects of the S͟hāh coming to trade "in her states or passing through her states for other lands would enjoy all freedoms and advantages that may be granted according to the customs and charters of her Empire" (Art. 4). Both parties were allowed to have agents or consuls in such cities as they might deem fit (Art. 6). In 1736 the English received a *raḳam* renewing most of their privileges (*Selections from State Papers*, Bombay 1908, 48), but neither they nor the Dutch or French merchants secured full renewals of their privileges.

On 12 April 1763 an English East India Company agent concluded an agreement with S͟hayk͟h Saʿdūn of Bushire, which gave the English exemption from custom duties on imports and exports and laid down that only 3% should be taken from merchants who bought and sold to the English (Art. 1). The import and sale of woollen goods was to be solely in the hands of the English (Art. 2). The English were to have ground on which they could erect a factory on which they could hoist their colours and have twenty-one guns for saluting (Art. 6). No European nation was to be permitted to settle in Bushire as long as the English had a factory there (Art. 3). The brokers, linguists, servants and others of the English were to be entirely under the protection and government of the English (Art. 4). On 2 July 1763 Karīm K͟hān gave a grant in similar terms to the English. They were given permission to have ground for a factory in Bushire or any other port in the Gulf and to build factory houses in any part of the Persian kingdom and were granted the same exemptions, monopolies and privileges as granted by S͟hayk͟h Saʿdūn (texts in C. U. Aitchison, *A collection of treaties, engagements and sanads relating to India and the neighbouring countries*, Calcutta 1933, xiii, 41-4). On the death of Karīm K͟hān confusion and disorder broke out again. His nephew D̲j̲aʿfar K͟hān gave a farman to the English for unrestricted trade throughout Persia and exemption from all customs dues (text *ibid.*, 44-5), but this was in fact of little value since D̲j̲aʿfar K͟hān's writ did not run throughout the province of Fārs, let alone the rest of Persia.

In the nineteenth century contact between Persia and Europe was once more joined in a more permanent way but under somewhat different circumstances to those which had prevailed under the Ṣafavids. In 1801 a commercial treaty annexed to the political treaty of the same date was concluded between Fatḥ ʿAlī S͟hāh and Sir John Malcolm acting on the part of the English government. Article 1 provided for reciprocity, stating that the merchants of the two contracting states were to "travel and carry on their affairs in the territories of both nations in full security and confidence, and the rulers and governors of all cities are to consider it their duty to protect from injury their cattle and goods". By Article 2 the traders and merchants of England and Hindustan in the service of the English government were permitted to settle in Persia and no government duties, taxes, or requisitions were to be collected on any goods which were the property of either of the governments, the usual duties on such to be taken from purchasers (Art. 2). By an Additional Article it was laid down that the duties levied on purchasers of iron, lead, steel, broadcloth, and purpetts that were exclusively the property of the English government were not to exceed 1%. All duties, imports and customs which were at that period established in Persia and India (on other goods) were to remain fixed and not to be increased. Article 4 stated that "If any person in the empire of Persia die indebted to the English Government, the ruler of the place must exert his power to have such a demand satisfied before those of any other creditor whatever. The servants of the English Government, resident in Persia, are permitted to hire as many domestic natives of that country as are necessary for the transaction of their affairs; and they are authorised to punish such, in cases of misconduct, in the manner they judge most expedient, provided such punishment does not extend to life or limb; in such cases the punishment to be inflicted by the ruler or governor of the place". Freedom to build houses in any port or city of Persia and to sell or rent them was also given (Art. 5) (text in *ibid.*, 50-3). The treaty was never ratified.

In January 1808 General Gardane, who had been sent to Persia at the head of a French mission after the signature of the Treaty of Finkenstein (1807), negotiated for France a commercial treaty which reaffirmed the arrangements in favour of the French under S͟hāh Sulṭān Ḥusayn's farman of 1708 and the Franco-Persian Treaty of 1715.

All the farmans and treaties mentioned above granted privileges and immunities to the subjects of foreign powers; some placed them in a more favourable position than nationals in matters of taxation and trade, and removed disputes concerning them from the jurisdiction of the local courts. Farmans were by their nature unilateral instruments. In as much as Persian merchants were rarely established in Europe, the operation of the treaties, even where reciprocity was granted, tended to be to the advantage of one party only. Some authors consider the origin of the capitulations in Persia to be these farmans and treaties, especially the French treaty of 1715. There are striking resemblances between some of the provisions of these farmans and treaties on the one hand and the privileges and immunities enjoyed by European powers in Persia in the nineteenth and early twentieth century. Nevertheless, the Treaty of Turkomānčāy concluded between Persia and Russia in 1828 and the separate act relative to commerce concluded on the same date under Article 10 of that treaty is generally regarded as the origin of the capitulations in Persia. Several of the provisions of these two instruments give privileges and immunities similar to those found in earlier documents. But, whereas the farmans were grants of grace and the earlier treaties freely negotiated, the Treaty of Turkomānčāy was concluded under duress after a disastrous war and sealed Russian ascendancy in northern Persia. The privileges and immunities which it granted were associated with the fear of foreign domination and their application often extracted by threat or actual force. In modern Persian usage, the

term "capitulations" is applied only to the régime instituted by the Treaty of Turkomānčāy. Strictly speaking, the term is applied to the extra-territorial rights granted by that treaty and extended to other nations under most favoured nation treatment. In practice, however, the capitulatory régime covered also, or was closely connected with, trading privileges, and became closely associated with the question of protection, which in turn became connected with asylum; both matters which gave rise to many disputes between Persia on the one side and Great Britain and Russia on the other.

By Article 1 of the separate act relative to commerce Russian subjects provided with passports were to be allowed to trade throughout Persia. Persian subjects were to be allowed to import their merchandise by the Caspian or the land frontier between Persia and Russia and to enjoy most favoured nation treatment. By Article 2 contracts, bills of exchange, securities and other engagements in connection with business transactions between Persians and Russians were to be registered before the Russian consul and the governor (*ḥākim*). Merchandise imported into Persia or exported from Persia by Russian subjects and Persian produce imported into Russia by Persians or Russian merchandise exported from Russia by Persians were to be liable to a duty of 5% levied once and for all at their entrance or exit. Russia undertook not to increase the duty of 5% should she deem it necessary to make new customs regulations and new tariffs (Art. 3).

Articles 5, 7, and 8 were specifically of a capitulatory nature. Article 5 stated that, "Seeing that, according to the existing usages in Persia, it is difficult for foreign subjects to find houses, warerooms or proper places for the storage of their merchandise to let, it is permitted to Russian subjects in Persia not only to rent, but also to acquire, by every right of ownership, houses to dwell in, as well as ware-rooms and places in which to deposit their merchandise. The servants of the Persian Government shall not be allowed to enter by force the said houses, ware-rooms or places without having recourse, in cases of necessity, to the authority of the Minister, or of the Chargé d'Affaires, or of the Consul of Russia who shall depute an officer or dragoman to be present at the inspection of the house or the merchandise".

Article 7 read "All lawsuits and litigations between Russian subjects shall be submitted exclusively to the investigation and decision of the Mission or of the Consuls of Russia in conformity with the laws and customs of the Russian Empire. So also shall disputes and lawsuits arising between Russian subjects and those of another Power, in case the two parties shall consent to such a course. Whenever any disputes or lawsuits shall arise between Russian and Persian subjects, the said lawsuits or disputes shall be brought before the Hakim or Governor, and shall not be investigated and decided except in the presence of the Dragoman of the Mission or of the Consulate. Once judicially disposed of, such disputes shall not be allowed to be instituted a second time. If, however, circumstances should be of such a nature as to render a second trial necessary, it shall not take place without previous intimation being given to the Minister, or the Chargé d'Affaires, or the Consul of Russia; and in that case the action shall be brought and decided only in the Dufter, that is to say in the Supreme Court of the Shah at Tabriz or at Teheran, likewise in the presence of a Dragoman of the Mission or of the Russian Consulate".

Article 8 stipulated that "In case of murder or any other crime committed among Russian subjects, the investigation and decision of the case shall be within the exclusive province of the Minister, or Chargé d'Affaires, or Consul of Russia in virtue of the jurisdiction delegated to them over their own countrymen. If a Russian subject should happen to be implicated with individuals of another nation in a criminal suit, he shall not be prosecuted nor molested in any way without proofs of his participation in the crime; and even in that case, as in the one in which a Russian subject should be charged with direct culpability, the tribunals of the country shall not be competent to proceed with the trial and judgment of the crime except in the presence of a delegate of the Mission or the Russian Consulate, and if there should be none on the spot in which the crime has been committed, the local authorities shall take steps to send the delinquent to a place where there is a Consul or a constituted Russian agent. The evidence both for and against the accused shall be faithfully taken by the Hakim and by the Judge of the place, and attested by their signature; transmitted in this form to the place where the offence is to be tried; this evidence shall constitute a record or authentic summary of the proceedings, unless the accused should clearly demonstrate the falsity of the same. When the accused shall have been duly convicted and the sentence passed, he shall be handed over to the Minister or Chargé d'Affaires or Consul of His Imperial Majesty, who shall send him back to Russia, there to receive the punishment awarded by the law" (text in *ibid.*, pp. xxiii-xli).

From time to time as regards the payment of customs duties and exemption from internal tolls and road taxes the subjects of other European powers were placed on a similar footing to the Russians, but this was resisted by Persia, and in 1851 the Ministry for Foreign Affairs announced that the subjects of all countries not having commercial treaties with Persia would be called upon to pay the same duties as Persian merchants. In due course, however, many European and American states acquired capitulatory privileges by either special articles included in treaties concluded between themselves and Persia or a clause giving most favoured nation treatment. Already in 1841 Great Britain had obtained most favoured nation treatment in the matter of customs duties by Article 1 of the commercial treaty concluded with Persia in that year; Articles 9 and 12 of the Treaty of Paris 1857 also accorded most favoured nation treatment (texts in *ibid.*, 67-9, 81-5). Spain received most favoured nation treatment in a commercial treaty concluded with Persia in 1842 (text in *ibid.*, xlii-xliv). Similar privileges were acquired by France (1855), the U. S. (1856), Austria-Hungary, Belgium, the Netherlands, Denmark, and Norway and Sweden (1857), Greece (1861), Italy (1862), Germany and Switzerland (1873), Mexico and the Argentine (1902), and Chile, Uruguay, and Brazil in 1903 (see A. Matine-Daftary, *La suppression des capitulations en Perse*, Paris 1930, 67 ff.).

The capitulations were less elaborate in Persia than in the Ottoman Empire and less burdensome. They were, nevertheless, onerous, particularly because of the derogation of sovereignity which they involved, the privileged position which they gave to foreigners in matters of trade and the inviolability of their persons, domiciles, and goods, and the opportunity which they gave to Persian subjects to place themselves outside the authority of the Persian law if they succeeded in obtaining the protection of a

foreign power. Their operation depended much upon the circumstances of the moment and the temper of the diplomatic officials concerned.

Special tribunals under a department of the Ministry for Foreign Affairs, known as the *dīwān-i muḥākamāt-i k͟hārid͟ja* and staffed by officials of the ministry, were set up in the capital for the settlement of disputes between Persians and foreigners. In the provinces, representatives of the Ministry for Foreign Affairs, known as *kārgud͟hārs*, presided over special courts for the same purpose and had general supervision of the activities of foreigners. Unlike the Ottoman empire, the procedure and machinery for the settlement of disputes by these courts was of the rudest kind (cf. A. C. Wratislaw, *A consul in the East*, London 1924, 190). Foreign consuls had, in effect, the power of veto because the decision of the court could not be put into effect unless countersigned by the consul (Matine-Daftary, *op. cit.*, 79-80).

Throughout the nineteenth century and in the early twentieth century there was a constant state of contention and friction between the Persian government and the agents of foreign powers arising out of the capitularly regime, but it was not until the Great War of 1914-18 and the unilateral abrogation of the capitulations by Turkey in 1914 that serious consideration was given to their abolition in Persia. In 1918 the cabinet of Ṣamṣām al-Dawla announced their unilateral abolition. This was probably no more than a declaration of intent and was of no immediate effect. A demand for their abolition submitted by the Persian government to the Peace Conference in March 1919 was also abortive: the delegation, for reasons unconnected with this demand, was not received. On 26 June 1919, however, there was an exchange of notes with the Soviet government on the abolition of Russian consular jurisdiction. In the following year, on 1 June, a treaty was signed with China which contained no extra-territorial provisions, showing the lines along which the Persian government was thinking. On 26 February 1921 a treaty was concluded between the Soviet government and the new Persian government, which had seized power by a coup d'état early that year.This treaty was the first major step in the abolition of the capitulations. Article 1 declared all treaties concluded between the Tsarist government and Persia to be null and void. Article 16 confirmed the abolition of consular jurisdiction over Russian subjects in accordance with the note of 26 June 1919, and declared that subjects of the Soviet Union in Persia and Persian subjects in the U.S.S.R. would enjoy equal rights with the nationals of the country and be subject to the local tribunals of justice. (Texts in Aitchison, *op. cit.*, lxxxvi-xcvi. See also Matine-Daftary, *op. cit.*, 151-3).

The Persian government under Riḍā K͟hān (who became Riḍā S͟hāh in 1925) now embarked on a vigorous programme of modernization. This involved, *inter alia*, the promulgation of civil, commercial and penal codes, the recruitment and training of judicial officials to apply the new laws, and the abolition of the capitulations. The commercial code was passed in three parts in February, April, and June 1925, and the penal code promulgated in February 1926. In 1927 after a reconstruction of the government all judicial tribunals were dissolved and the new minister of justice, Mr. Davar, authorised to prepare bills for the reorganization of the judicial system. On 26 April 1927, at the opening meeting of the commission charged with this work, Riḍā S͟hāh announced his wish to abolish the capitulations (Matine-Daftary, *op. cit.*, 180, 210). Following upon this, the president of the Council of Ministers, Mustawfī al-Mamālik, announced in the National Assembly on 30 April that the government would include the abolition of the capitulations in its programme (*ibid.*, 211). Towards the end of the year a commission was appointed to draw up a civil code. On 10 May 1928 it came into provisional operation. On the same date the Acting Minister for Foreign Affairs delivered notes to the legations concerned denouncing all treaties containing capitulatory provisions and stating that they would cease to be effective as from 10 May 1928 and that states which enjoyed similar provisions by virtue of most favoured nation treatment would cease to do so after 10 May 1928. Provincial tribunals presided over by the *kārgud͟hār* were dissolved by the law of 12 S͟hahrīvar 1306/3 September 1927 (*ibid.*, 222-5).

iv.—Modern Egypt

Muḥammad ʿAlī and his successors, especially Saʿīd and Ismāʿīl, were eager to attract foreigners and promote their economic activity in Egypt in order to modernize and Europeanize Egypt as rapidly as possible. Moreover, for political considerations they felt the continuous need of conciliating the European Powers. As a result they permitted the privileges of foreigners to expand far beyond the limits fixed in the texts of the Capitulations. Almost all these privileges grew in Egyptian usage to much larger proportions than in other parts of the Ottoman Empire.

(a) The privileges of foreigners in Egypt

1. Taxation. The fiscal clauses of the Capitulations were primarily aimed at exempting West-European residents from the *d͟jizya* or specified burdensome taxes. However, in nineteenth century Egypt they were interpreted as denying the Egyptian government the right to impose any taxes on the nationals of Capitulatory Powers without the previous consent of their governments. There was one exeption to this rule: the obligation to pay a land tax was tacitly accepted by foreigners as incidental to the privilege to own land, a privilege that was granted to foreigners in Egypt long before it was formally conceded by law in the Ottoman Empire in 1867. But even the payment of this tax involved many complications (cf. G. Baer, *A history of landownership in modern Egypt*, London 1962, 65-6). The payment of all other taxes by foreigners had to receive the explicit consent of the Powers. Customs were covered by commercial treaties (see below). The Convention of London, signed on 17 March 1885 by the six principal European Powers, accepted the house tax decree of 13 March 1884 (with certain modifications concerning the representation of foreigners on the tax commissions). In 1890 the Powers agreed that the newly established municipality of Alexandria be entitled to impose municipal taxes on foreigners. In 1930 consent was given to an additional rate on urban property for the payment of night-watchmen; similarly, during the years 1932-6 a tax on cars and some minor taxes were conceded. However, before the abolition of the Capitulations in 1937 the Powers prevented the introduction of many other taxes in Egypt, for instance an income tax.

2. Customs. There was no difference between the customs tariffs of Egypt and those of the Ottoman Empire before the Khedive of Egypt had been given the right to conclude commercial conventions

(in 1867, and again in 1873). During the last quarter of the century Egyptian commercial conventions were not more advantageous to the Powers than Ottoman ones, but in 1902 France succeeded in reducing the import duty to 8 per cent *ad valorem*, and by the operation of the 'most favoured nation' clause this rate was automatically applied to all other nations which had concluded commercial treaties with Egypt. After 1925 the treaties in force expired one after the other. The scale of duties, however, could not be changed until the last of these treaties, that between Egypt and Italy, expired in 1930. On 17 February of that year Egypt introduced a revised customs tariff which aimed at increasing the revenue and affording some protection to nascent industries.

3. Individual liberty. Foreigners in nineteenth century Egypt enjoyed greater individual liberty than in other parts of the Ottoman Empire in two respects. First, the Ottoman regulation that no church could be built or repaired without the explicit permission of the authorities was not enforced in Egypt. Second, in Egyptian usage the Ottoman restrictions on the freedom of foreigners enacted in 1844 and 1869 were not applied. Thus Egyptian authorities generally did not ask foreigners disembarking in Egypt for passports nor were they required to carry a *ta<u>dh</u>kira* [*q.v.*].

4. Inviolability of domicile. In Egypt the principle of inviolability of domicile was considerably expanded and included the premises of any business. For instance, in Turkey customs officers used to visit all vessels entering harbours and keep officers on board till the cargo was landed. In Egypt, on the other hand, they could only watch the discharge and seize contraband when it was actually on shore. The privilege of exemption from search was claimed even for fishing boats by their Maltese, Greek and Italian owners. The restrictions of this privilege which were agreed upon between the Sublime Porte and the Powers in 1868 and 1874 did not apply to Egypt, and only in the commercial agreements between Egypt and the Powers of the 1880's and the 1890's did Egypt acquire effective rights to search vessels for detecting contraband.

5. Legislative immunity. While the *Tanẓīmāt* laws in Turkey, such as the Press Law, applied to foreigners (Scott, 198), in Egypt the foreigners' immunity from local legislation was complete. No Egyptian law was applicable to foreigners unless it had received the explicit consent of the Powers. This principle frustrated many attempts to introduce modern institutions (*e.g.*, Saʿīd's police regulations; for its detrimental influence on the development of municipalities see G. Baer, *The beginnings of municipal government in Egypt*, in *Middle Eastern Studies*, iv/2 (Jan. 1968)).

6. Jurisdiction before 1876. The principle of the personal, rather than territorial, nature of law found in Egypt its most extreme application. Gradually the maxim *actor sequitur forum rei* became well established, *i.e.*, the defendant's court had jurisdiction in all cases, not only in cases involving foreigners of different nationalities as in other parts of the Ottoman Empire. Thus the consular courts claimed jurisdiction in any criminal, commercial or civil case in which one of their nationals, or even 'protected persons', was the defendant. Moreover, in Egypt, but not in Turkey, cases concerning immovable property involving foreigners of different nationalities were also judged in the consular court of the defendant. The consuls normally applied the laws of their own countries. If an appeal was made, it had to be addressed to the defendant's home court, and for the execution of the consul's sentence in criminal cases the foreign criminal often had to be sent to his home country.

In addition to the reasons for the general expansion of foreign privileges in Egypt mentioned above, this difference between Egypt and other parts of the Ottoman Empire has been explained by the rule of most of the Capitulations that cases involving foreigners and Ottoman subjects which exceeded a specified sum should be judged by the Imperial *Dīwān*. Since travel from Egypt to Istanbul was long and expensive, it was generally preferred to submit the case to the court of the defendant (Barakat, 173).

(b) Judicial reform and the abolition of the Capitulations

1. Mixed Courts before 1876. Attempts to establish a unified system of courts at least for cases in which persons of different nations were involved, as well as to provide for Egyptian representatation on the bench in cases in which Egyptians were the plaintiffs, were made in Egypt even prior to similar attempts made in Turkey. A mixed commercial tribunal was established in the early 1820's under the presidency of Muḥammad ʿAlī's agent, the prominent merchant Muḥammad al-Maḥrūḳī (F. Mengin, *Histoire de l'Égypte sous le gouvernement de Mohammed-Aly*, Paris 1823, ii, 441; for 1243/1827-8 see Amīn Sāmī, *Taḳwīm al-Nīl*, Cairo 1928, ii, 333). After long periods of inactivity the Mixed Commercial Tribunals were reorganized in Alexandria and Cairo according to an order of 3 September 1861 which provided for the appointment of Egyptian and foreign members and of an Egyptian president. However, these tribunals never worked effectively since foreigners did not recognize their competence in cases in which they were the defendants and had recourse to them only when they were the plaintiffs (Stoddart to Aberdeen, 31 December 1845, Public Record Office, London, F. O. 78/624, and Report by Consul Green, 2 April 1856, F. O. 78/1222).

2. The reform of 1875. In a report of 1867 Nūbār Pa<u>sh</u>a, at that time Egyptian Minister of Foreign Affairs, proposed the establishment of mixed courts with jurisdiction in all cases in which foreigners were involved—commercial, civil, or criminal. After long negotiations, in the course of which Nūbār was compelled to be contented with reforms more modest than his original ideas, the *Règlement d'Organisation Judiciaire* was enacted in 1875. The new Mixed Courts, which were established in 1876 according to the *Règlement*, had jurisdiction in all civil and commercial cases between foreigners of different nationalities and between foreigners and Egyptians. Their power extended also to foreign litigants of identical nationality in all cases concerning land held in Egypt, and even to cases where an Egyptian corporation was involved against Egyptian litigants if there was foreign capital invested in the corporation (so-called 'mixed interests'). In the sphere of criminal jurisdiction the Mixed Courts were only empowered to deal with police offences of foreigners for which the maximum penalties were a fine of £E 1 or one week's imprisonment, and offences committed directly against the administration of justice by the Mixed Courts themselves. All other penal offences of foreigners were dealt with by the consular courts, which also retained jurisdiction in matters of personal status of foreigners

and civil actions, other than those involving land, between foreigners of the same nationality.

Foreign judges of the Mixed Courts were appointed by the Egyptian government after consultation with the Ministers of Justice of the countries from which they came, and the proportion of their number to that of the Egyptian judges was fixed. There were three District Tribunals and one Court of Appeal, as follows (data for 1937):

	Egyptian judges	Foreign judges
Court of Appeal, Alexandria	6	10
District Tribunal, Cairo	8	17
District Tribunal, Alexandria	6	10
District Tribunal, Manṣūra	3	7
Total	23	44

Since the Mixed Courts were open to nationals of all foreign states, their establishment involved conceding new privileges to nationals of non-Capitulatory Powers.

The Mixed Courts judged according to 'Mixed Codes' based mainly on the Code Napoléon and French law. Since these codes could not be altered without the unanimous consent of fifteen governments, a Legislative Assembly was established in 1911 which was competent to approve additions and modifications (but not to endorse measures contravening the fiscal immunity of foreigners).

3. The abolition of the Capitulations and of special jurisdiction of foreigners. At the outbreak of the First World War the Turkish government declared the abolition of the Capitulations, which was subsequently recognized by the Capitulary Powers in Article 28 of the Treaty of Lausanne in 1923. Egypt, however, was unaffected by this act, since Turkish sovereignty or suzerainty in Egypt had been terminated by the declaration of a British Protectorate over Egypt in 1914 and was later renounced by Turkey, with effect from 5 November 1914, in Article 17 of the Treaty of Lausanne. However, by Article 13 of the Anglo-Egyptian Treaty of 1936 it was agreed that the Capitulations should be speedily abolished, Egypt should achieve complete freedom of legislation (including financial legislation) and the Mixed Tribunals should be abolished after a period of transition in which the powers of the consular courts should be transferred to them.

As a result, a conference of the Capitulary Powers met in Montreux on 12 April 1937 at the invitation of the Egyptian government. The texts of the Final Act of this conferenc were signed on 8 May 1937. The Capitulations were abolished, and so was the legislative and fiscal immunity of foreigners. During a transitional period of 12 years (until 14 October 1949) criminal jurisdiction and such civil jurisdiction as was still exercised by the Consular Courts was transferred to the Mixed Courts, the consuls retaining jurisdiction in matters of personal status only. Foreigners normally subject to the Mixed Courts were permitted to submit themselves to the jurisdiction of the Native Courts. All vacancies up to two-thirds of the total membership of the District Courts were to be filled by Egyptian judges, who were also permitted for the first time to become presidents of these courts. Judgment was to be given in Arabic as well as in a European language.

On 15 October 1949 the Mixed Courts and the Consular Courts were closed, jurisdiction was transferred to the National Courts, and the law codes were revised and unified.

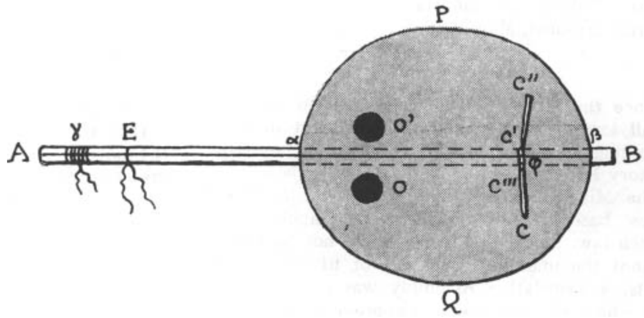
IMUHAGH, IMUSHAGH, [see AHAGGAR, BERBERS, ṬAWĀRIḲ].

IMẒAD (Berber) or *amẓad, umẓad* according to the dialect, "hair, fur", denotes a musical instrument in use among the Touareg (Ṭawāriḳ [*q.v.*]) and generally compared with a violin. The sounding-box consists of a half-calabash of varying diameter (20 to 50 cm.), over which a goatskin, tanned quickly and stripped of hair, is stretched and fixed with cord or acacia thorns; often decorated with motifs painted in bright colours or with inscriptions in *tifinagh* [see BERBERS, vi], the goatskin is pierced with one or two sound-holes (in Ahaggar, *tiṭṭ* "eye") either to the right and left of the bridge, or between the bridge and the visible part of the wooden neck which passes under the taut goatskin and emerges on the other side. At each end of the neck the single string, formed of horse-hairs coated with resin, is fixed by means of a thin strip of leather; the tension of the string, which is held above the goatskin by a bridge composed of two small strips of wood tied together in the form of a cross, is regulated by means of a "noose" consisting of a moveable strip knotted to the neck, its distance from the end being adjustable. The bow is a curved wooden wand semi-circular in shape, between the ends of which is stretched a string also made of horse-hair coated with resin from the gum-tree instead of rosin.

The *imẓad* is held by the player on her thighs as she sits low down, just above the ground, with legs tucked back; her left hand holds the outer part of the neck, with the thumb on the noose, the right hand holding the bow at right angles to the string, pointing towards the chest. Thus the *imẓad* is "constructed partly like a percussive instrument, held like an instrument with plucked strings, and played like an instrument with a bow"; the playing of the *imẓad* is the subject of a technical study (see *Bibl.*) from which it appears that the music played on this instrument is of an archaic kind entirely unconnected with Islam.

In the time of Father Ch. de Foucauld, the *imẓad* was "the favourite musical instrument, noble, elegant par excellence" which in some measure symbolized the Touareg's fatherland. It was played in the courts of love known as *ahāl*, and to deprive men of music was a severe punishment, particularly after an unsuccessful raid; to play or, more accurately, "to strike" the violin (*awt imẓad*) signified "to utter charming and flattering words". While at that period half the noblewomen played it—though good players numbered only four or five—today this instrument is almost abandoned and it is even forbidden in certain encampments on account of its harmful influence on the young.



AB = neck
αβ = part of stick passing under skin, between skin and calabash
αβK = calabash
αPβQ = skin
ππππ = bracing thongs stretching skin over calabash

IN SHĀʾ ALLĀH, "if God wills", "if it pleases God". The expression is usually called *istithnāʾ*, "formula of exception" (or "de conditionnement", tr. H. Laoust). It means that God alone is the master of all that happens, as well as of the thoughts, acts and plans of man. In Islamic countries in ordinary speech it is used to qualify anything in the future, even the near future. Massignon describes this formula (*Passion*, 585) as one which "est restée le signe distinctif, la parabole type de la vie sociale, pour la Communauté islamique".

The expression *in shāʾ Allāh*—or an equivalent —reappears many times in the Ḳurʾān, especially, it seems, in the *sūra*s of the Medinan period: to leave to God's will the realization of a wish, the announcement of a reward or a punishment, or the future execution of a given order (*e.g.*, II, 70, VI, 41, IX, 28, XI, 33, XII, 99, etc.). Two similar formulas are: "if God had willed" (*law*; still more frequent), and "so far as God wills it" or "unless God does not will it" (*illā mā* . . .; x, 49, xi, 107-8, etc.). This "leaving to God" required by the *istithnāʾ* may be compared with a similar teaching in Christianity, *James*, iv, 19.

The problem arises whether the expression *in shāʾ Allāh* may (or must) be used in the case of a definite promise, of an oath or a giving of witness. The question is whether it is then an attestation "in the form of a circle" (*yamīn dāʾira*; cf. Massignon, *ibid.*), causing to intervene (by invoking God) a possibility that the attestation made (in the name of God) may be vain. The answer of the devout Muslim is that human oaths and witness "are valid only if they correspond to the divine truth" (*op. cit.*, 586) which transcends our assurances and our resolutions. It is only with God's help that we are able to keep our promises to God and to men.

The use of the *istithnāʾ* in the conclusion of contracts raised arguments among the jurists, who maintained that there was a risk that it might become a "ruse" to escape from the engagements undertaken, or even an abdication from all responsibility. Some, among them Ibn Masʿūd, suppressed the *in shāʾ Allāh* only in contracts or attestations "with immediate effect" (*fi 'l-ḥāl*); others tended to suppress it from every contract or attestation, even those whose effect was in the future: such were the Muʿtazilīs and the Māturīdi-Ḥanafīs. The Khāridjīs on the other hand retained it absolutely; similarly, with some nuances, with Ibn Ḥanbal and al-Ashʿarī (*ibid.*, 585). One of the aims of *fiḳh* was to restrain any abuse of the *istithnāʾ* by conditions "linking the contracting parties in case of the non-execution of an agreement".

Nevertheless this expression of reliance on the inscrutable will of God had a profound influence on the mentality. One of the main questions raised is that of the relations between faith (*īmān* [*q.v.*]) and the "formula of exception". It can be seen moreover

as a particular instance of the juridical problem concerning contract or witness: *īmān* is a pact (*ʿaḳd*) which links man to God.

Is it permitted to say: "I am a believer—if God wills" (*anā muʾmin—in s̲h̲āʾ Allāh*)? We give here the main answers of Sunnī Islam (cf. L. Gardet, *Les grands problèmes de la théologie musulmane: Dieu et la destinée de l'homme*, Paris 1967, 388-90).

1. Against the *istit̲h̲nāʾ*: (a) Muʿtazilīs: Man is "the creator of his own acts", it is a man's own will which makes him believe. "Let whosoever will believe" (Ḳurʾān, XVIII, 29). The "formula of exception" may not therefore be joined to the affirmation of faith. (b) Māturīdī-Ḥanafīs: "The believer is truly a believer and the unbeliever truly an unbeliever (*kāfir*)", is stated in article 3 of the *Waṣiyyat Abī Ḥanīfa*; "there cannot therefore be any doubt concerning faith, nor concerning unbelief,—according to the word of the Most High: 'Those in truth are the believers' (Ḳurʾān, VIII, 74), 'those in truth are the unbelievers' (IV, 151)" (cf. A. J. Wensinck, *The Muslim creed*, Cambridge 1932, 125, 138-40). The formula *anā muʾmin* expresses present faith. If a man who at present has faith later dies without faith, he will have changed from happiness to unhappiness, from being saved to being damned (for the Māturīdī position in detail, see in particular ʿAbd al-Raḥīm Ibn ʿAlī, *Kitāb Naẓm al-farāʾid*,[2] Cairo n.d., 62-4). The attestation given in the present certainly does not have any effect on the divine decree for the Hereafter; the believer must therefore affirm his faith without placing any limit on his witness. (c) Some As̲h̲ʿarīs, among them al-Isfarāʾinī and al-Bāḳillānī are against it "through determinism" (L. Massignon, *op. cit.*, 585, n. 2). Acts, whatever they are, being created by God, to invoke the Divine Will has no real significance.

2. Supporters of the *istit̲h̲nāʾ*: (a) Ibn Ḥanbal in particular (*ʿAḳīda*, i, 25) and the whole of the Ḥanbalī line. It should be mentioned here that the Ḥanbalī attitude is against the opposite theory of the Murd̲j̲iʾīs; Ibn Baṭṭa insists on this (cf. H. Laoust, *Ibn Baṭṭa*, 48-9/79-82). After listing various doctors who desire to join *in s̲h̲āʾ Allāh* to *anā muʾmin*, and quoting a Ḳurʾānic text and two *ḥadīt̲h̲*s, Ibn Baṭṭa states that the "formula of exception" not only does not destroy certainty (*yaḳīn*) but actually implies it. It "is in fact valid for the future. When a man says 'I am a believer, if God pleases', this means: if God accepts my faith and the confidence (*amāna*) which I have placed in Him" (*ibid.*, 49/81). It should be noted, as H. Laoust mentions (81, n. 1), that some Ḥanbalīs accept, in the name of *istit̲h̲nāʾ*, "the legitimacy of a generalized doubt". The school as a whole refuses to accept this. (b) Al-As̲h̲ʿarī, the great majority of the As̲h̲ʿarīs, all the S̲h̲āfiʿīs and several Mālikīs. They see the problem mainly from the perspective of the future (*fi 'l-mustaḳbal*). The only faith which counts is that held at the moment of death. Since the actions of man depend on the Divine Decree, no-one can know what his state will be at the last moment. Thus no person can state "I am a believer" without adding "if God wills it", on condition however that the latter statement is not used to conceal a doubt on the present reality of his faith (see the summary of the theories of the As̲h̲ʿarī school *apud* al-Bād̲j̲ūrī, *Ḥās̲h̲iya ʿalā ... D̲j̲awharat al-tawḥīd*, Cairo 1352/1934, 60).

But the use of *in s̲h̲āʾ Allāh* may be advised even when it is a case of faith at the present time. Thus al-G̲h̲azālī. In the *Iḥyāʾ* (i, 108-11), he lists three reasons: (1) the formula of exception must signify not the doubt, but the humility of the believer; (2) the Ḳurʾān and the *ḥadīt̲h̲*s use it to indicate a wish, a positive desire (cf. similar remarks of Ibn Baṭṭa); (3) it cannot and must not express a doubt about the present existence of faith, but about its *perfection*—and the problem is how to be sure that the heart does not conceal any hypocrisy or self-complacency, that the works bearing witness to the adherence of the heart are truly those which God demands of it. It is thus aiming at an interiorization of faith that al-G̲h̲azālī pronounces unreservedly for *istit̲h̲nāʾ*. And he states (a fourth reason) that its use shall be especially required in the case of the future, and in particular of that decisive future event, the moment of death, which is entirely in God's hands, and which will decide a man's eternal fate (*ibid.*, i, 110-1; cf. Wensinck, *op. cit.*, 140).

Whatever the opinion of the doctors, it can be said that the *in s̲h̲āʾ Allāh*, so often uttered, is, in Muslim social life, for the whole of the future, both near and distant, a constant call to leave matters to God, Who directs and rules all things and all men according to His decree. Nor is it possible for the juridical acts, contracts and witnesses, and even more a statement of the state of salvation of the believer, to be exempt. There is certainly a risk that the formula may provide a cover for some laxity (and this seems to be the reason for the Māturīdī-Ḥanafī attitude); but the devout believer must find in it a new incentive to strengthen both the right intention (*niyya*) and an active abandonment (*tawakkul*) of himself to the Will of the eternal Giver (*al-wahhāb*, Ḳurʾān, XXXVIII, 9). "The recourse to the 'if it pleases God' betrays on the part of the believer a wish *in petto*: that God Himself should come to his aid, to remit the debt which he contracts without having the wherewithal to pay it. God alone can fulfil our contracts with Himself, and cancel our contracts with men" (L. Massignon, *op. cit.*, 586). And this truth is even more insistent in the case of faith, a pact (*ʿaḳd*) concluded with God Who asks both internal reality (*taṣdīḳ*) and an explicit acknowledgement (*iḳrār*).

ʿINAB [see K̲H̲AMR].

INAK [see K̲H̲WĀRIZM].

ĪNĀL, Īnālids, name of a Turcoman chief (from the old central-Asiatic title Yīnal) who made himself independent at Āmid (Diyār Bakr [*q.v.*]) at the end of the 5th/11th century during the struggles among the successors of Maliks̲h̲āh, and name of the dynasty, which remained in power until the end of the 6th/12th century. Although they are mentioned in a few inscriptions, the historians have written little on the Īnālids.

Masters of a place which was commercially and strategically important, they nevertheless held at Diyār Bakr a secondary place compared with the Artuḳids, who were sometimes supported by the Zangids; and, in the interior, they had to yield the real power to a family of native *ruʾasāʾ*, the Nīsānids [*q.v.*], who did not hesitate to rely at times on the Assassins. In 579/1183, Ṣalāḥ al-Dīn put an end to the combined power of the two families, and gave Āmid to his Artuḳid ally of Ḥiṣn Kayfā: the two places remained from this time united under this branch of the dynasty. The town of Āmid seems however to have enjoyed under the Īnālids and Nīsānids, at least under the latter, a certain material and cultural prosperity and to have been also an active centre of Christianity. No Īnālid coins are known.

Gabriel, *Voyage archéologique dans les provinces orientales de la Turquie*, with the epigraphical supplement by J. Sauvaget, inscriptions nos. 62-5; see also the article ARTUḲIDS, and Zambaur, p. 139, no. 128. (CL. CAHEN)

ĪNAL or **ĪNALČUḲ**, the governor of Uṭrār [*q.v.*] under Sultan Muḥammad Khwārazm-Shāh [*q.v.*]. A kinsman of the Sultan's mother, Terken Khatun, he had been given the title of Ḳayïr-Khān. It was the execution by his orders of an ambassador of Čingiz-Khān [*q.v.*] and a caravan of Muslim merchants accompanying him that led to the Mongol invasion of Muḥammad's empire. Captured at Uṭrār after offering desperate resistance, he was put to death at Samarḳand in the spring of 617/1220.

ĪNĀL (or **AYNĀL**) **AL-ADJRŪD**, AL-MALIK AL-ASHRAF, SAYF AL-DĪN ABU 'L-NAṢR AL-ʿALĀʾĪ AL-ẒĀHIRĪ AL-NĀṢIRĪ, Mamlūk Sultan (857/1453-865/1461) of Egypt and Syria. A Circassian by birth, he had been bought in 799/1379 by the trader ʿAlāʾ al-Dīn (as his *nisba* al-ʿAlāʾī indicates), brought to Cairo and sold to Barḳūḳ [*q.v.*] (al-Malik al-Ẓāhir, whence Īnāl's *nisba* al-Ẓāhirī). He was enrolled in Barḳūḳ's corps of *al-Mushtarawāt*, remaining in the *Kitābiyya* until the reign of the sultan (al-Nāṣir) Faradj [*q.v.*]. Transferred then (whence his *nisba* al-Nāṣirī) to the *Khāṣṣakiyya*, in 824/1421, under al-Muẓaffar Aḥmad, son of al-Muʾayyad Shaykh, he became a "captain of ten"; under Barsbāy [*q.v.*] he was promoted to *Amīr al-ṭablkhāna*, then to *Raʾs nawba*, and in 830/1427 to *Amīr arbaʿīn*, *Raʾs nawba al-thānī*. Appointed *nāʾib* of Ghazza in 831/1428, he took part in Barsbāy's campaign of 836/1433 against the Aḳ-Ḳoyunlu chief Kara-Yülük ʿUthmān Beg, when Āmid (Diyārbakr [*q.v.*]) was attacked. The assault on the citadel, vigorously defended by ʿUthmān's son Murād, having failed, Īnāl was appointed *nāʾib* of Ruhā (Edessa), with the rank of *Amīr miʾa taḳdima alf bi 'l-diyār al-Miṣriyya*. Until 839/1436 he was engaged in numerous skirmishes with the Aḳ-Ḳoyunlu, and the next year was appointed *nāʾib* of Ṣafad. In 843/1439, he was summoned to Cairo by the sultan Čaḳmaḳ (like him an ʿAlāʾī) and was given the post of *Muḳaddam* and then, in 846/1442, of Chief Dawādār. In 846/1442 and 848/1444 he took part in the unsuccessful attacks on Rhodes.

On the death of Yashbak al-Sūdūnī in 850/1446, Īnāl succeeded him as *Atābak al-ʿasākir* (= *al-Amīr al-kabīr*). When Čaḳmaḳ died in 857/1453, Īnāl fell out with his son and successor ʿUthmān over the donative to be paid to various groups of *mamlūks*; in the subsequent street-fighting he occupied the Ḳalʿat al-Djabal and was appointed sultan, by an assembly including the (ʿAbbāsid) shadow-caliph and the four *ḳāḍī al-ḳuḍāt*, with the title al-Malik al-Ashraf Sayf al-Dīn. He was then 73 years old. His first preoccupation was to appoint ʿAlāʾīs to various posts, to break up the group of royal Mamluks formed by his predecessor, and to proclaim the abolition of various *maẓālim*-courts.

Īnāl's brief reign was full of incident. In 857/1453 he sent the second *amīr al-ākhūr* Barsbāy as envoy to the Ottoman Sultan Meḥemmed II in reply to an Ottoman embassy announcing the conquest of Constantinople. The following year he defeated the attempts of the Dhu 'l-Ḳādir-oghlu Fayyāḍ Beg to make himself *amīr* of Albistān, installing instead his brother Sulaymān Beg. In 859/1455 he put down a rising caused by dissension between his own mamluks and rival groups; he deposed the caliph al-Ḳāʾim, who had been involved, and appointed his brother al-Mustandjid in his place. Ignoring a complaint from the Ḳaramān-oghlu Ibrāhīm II that the Ottoman sultan Meḥemmed II was protecting the Greeks, he not only sent an embassy to confirm the good relations with Meḥemmed, but also despatched a force under Khoshḳadam to block Ḳaramānid expansion in Cilicia; that these troops occupied four fortresses in Ḳaramān and burned Larenda provoked strong criticism of Īnāl's policy. The same Khoshḳadam was sent against the Aḳ-Ḳoyunlu ruler Uzun Ḥasan [*q.v.*], who was besieging Malatya.

The next crisis was over Cyprus, which since 830/1427, in the reign of Barsbāy, had been tributary to the Mamlūk sultan. The Lusignan king John II (1432-58) had in person attended the ceremonies in Cairo upon Īnāl's accession. When he died, to be succeeded by his daughter Charlotte (1458-60) (with Louis of Savoy as joint ruler), John's illegitimate brother James, Archbishop of Nicosia (in Mamlūk sources: Djākam), feeling his life to be in danger, fled to Cairo. The dignitaries of Cyprus and the Knights of Rhodes preferred Charlotte as ruler, but the populace of Cyprus favoured James, who now found support among the Mamlūk *amīrs*. Ambassadors for the various parties came to Cairo, where Īnāl upheld the claim of James and proclaimed him King of Cyprus. James was sent back with the support of an Egyptian fleet and occupied Nicosia, but was unable to take Cherines (Kalʿat Sharīna), held by Charlotte. The Mamlūk troops suffered heavy losses, and the bulk of the Mamlūk force returned to Egypt.

The sources represent Īnāl as a just ruler and his reign as prosperous, mainly because of his monetary reforms: silver and gold coins of inferior weight were withdrawn from circulation and a new *fals* (of eight to the *dirham*) was issued. He died on 15 Djūmādā I 865/26 February 1461, at the age of 80 or 81, having reigned for eight years. He is described as dark, tall and thin; his scanty beard won him the nickname *adjrūd*. He left two sons and two daughters. As Īnāl had enjoined, his son Aḥmad succeeded him, as al-Malik al-Muʾayyad, but was deposed after four months, to be succeeded by Khoshḳadam [*q.v.*].

(M. C. ŞEHABEDDIN TEKINDAĞ)

İNAL, IBN AL-AMĪN MAḤMŪD KEMĀL (in modern Turkish: IBNÜLEMIN MAHMUD KEMAL INAL), 1870-1957, Turkish biographer and writer, a significant figure as being the last outstanding representative of traditional Ottoman scholarship and erudition. His father Meḥmed Emīn Pasha (1837-1908, also known as "Mühürdār" since he was private secretary to his patron and relative Yūsuf Kāmil Pasha (1808-76), Grand Vizier under ʿAbd al-ʿAzīz and son-in-law of Muḥammad ʿAlī of Egypt) served in various provinces in Anatolia and retired in 1908 as governor (*mutaṣarrif*) of the Aegean Islands. His mother Ḥamīde Nergīs died in 1935.

Maḥmūd Kemāl's ancestors came originally from Bukhārā and were known as Seldjen-oghlī (Selcenoğlu), a name which was engraved on the personal seals of the family. Later in life he wrote that he regretted having adopted the surname İnal (as a "translation" of Emīn) when family names were introduced by law in 1934, and not taking instead their old name Seldjen-oghlu, as some members of the family did (I. M. K. Inal, *Son hattatlar*, 672, n. 1). The by-name Ibn al-Amīn (Ibnülemin) begins to appear in his earliest writings, in the 1890's.

After graduating from the Shehzāde high school (*rüshdiyye*) located in the old *ʿimāret* of the Süleymāniyye *külliye*, Maḥmūd Kemāl entered the Mülkiyye [*q.v.*], but was obliged to leave because of ill-health. Later he attended some courses at the School of Law (Mekteb-i Ḥuḳūḳ) and public lectures in the principal *madrasa*s and mosques of Istanbul. But he was for the most part educated privately by his father and by tutors, learning Arabic, Persian, the classical Muslim sciences, and some French. The well-known Khodja Ṭāhir from Ipek, in Albania, the father of the poet Meḥmed ʿĀkif, was among his favourite teachers. The calligrapher Ḥasan Taḥsīn (1851-1915) was also his tutor; it was he who inspired his keen interest in the history of Turkish calligraphy (*Son hattatlar*, 424-7).

Maḥmūd Kemāl entered government service in 1889 as a clerk in the Department for Autonomous Provinces, in the Grand Vizier's Office. In 1891 he was transferred to the Office of the Grand Vizier's private Chancery (Ṣadāret Mektūbī Ḳalemi), where he became deputy-director in 1906 and director in 1908. After the restoration of the Constitution in 1908, during the crises concerning Bosnia and Bulgaria, he was appointed director of the Office for Autonomous Provinces (*Eyālāt-i Mümtāze we Mukhtāre*).

When ʿAbd al-Ḥamīd was deposed in 1909, a special committee under his chairmanship was set up to classify the documents and informers' reports (*jurnal*s) found in Yïldïz Palace and temporarily transferred to one of the "kiosks" at the entrance to the Ministry of War (the present University Faculty Club, "*Profesörler Evi*"). He was thus enabled to examine and copy many documents of unique importance regarding the home and foreign policy of ʿAbd al-Ḥamīd's reign (1876-1909), of which he was to make ample use in his works.

During the First World War, the Minister of Education Shükrü Bey ([*q.v.*], executed in 1926 for his leading part in the Unionist conspiracy against Muṣṭafā Kemāl) appointed him (together with Djenāb Shihāb al-Dīn, Süleymān Naẓīf and others) as a member of the Editorial Board of the *Āthār-i Müfīde Kütübkhānesi*, which was charged to prepare unique or rare manuscripts of Turkish literary works for publication. He wrote valuable introductions to many works in this excellently produced series (see below); but when the poet ʿAbd al-Ḥaḳḳ Ḥāmid [*q.v.*] used political influence to have his own books published in the series and Enwer Pasha ordered the reprinting of some of Nāmiḳ Kemāl's works for the Army, the project was abandoned. Wartime difficulties and shortages were additional causes.

From the end of the First World War to the dissolution of the Government of Istanbul (1918-22), he served as editor of the official government newspaper *Taḳwīm-i Weḳāyiʿ*, and in the last two months as head of the Government Chancery (*Dīwān-i Hümāyūn Beğlikčisi*). In this capacity he represented the Grand Vizier's office on the special political committee of under-secretaries appointed to draw up the Turkish view on the forthcoming peace-treaty negotiations (Col. Işmet Bey, the future Inönü, represented the Ministry of War on the same committee).

After a temporary appointment in the Administration of the Ottoman Public Debt (Düyūn-i ʿUmūmiyye [*q.v.*]), where he worked in the company of many leading writers and intellectuals of the period, he was in 1924 made president of the Commission for the Classification of Historical Documents (*Wethāʾiḳ-i taʾrīkhiyye taṣnīf heyeti*) by the Ottoman Historical Society (*Taʾrīkh-i ʿOthmānī Endjümeni*), of which he had been elected a member in 1923. In three years' concentrated work on the commission he was able to collect valuable material for his later works. In 1927, through the good offices of two of his friends and admirers, the poets Khalīl Nihād [Boztepe] and Ibrāhīm ʿAlā al-Dīn [Gövsa], the new Ankara Government appointed him Director of the Museum for Pious Foundations (*Ewḳāf-i Islāmiyye Müzesi*), later renamed Museum for Turkish and Islamic Arts (*Türk ve Islam Eserleri Müzesi*) located in the Süleymaniye *Külliyye*. He kept this position until his retirement in 1935.

In 1936, with the support of the Egyptian Princess Khadīdja ʿAbbās Ḥalim, he went to Mecca on pilgrimage and visited Egypt. In December 1939, Prince Muḥammad ʿAlī, then the heir-apparent to the Egyptian throne, invited him (together with the calligrapher Kāmil Akdik) to Egypt to help classify his collection of Islamic calligraphy. On his return to Istanbul in February 1940 he found himself appointed adviser to the Editorial Board of the Turkish edition of the Encyclopaedia of Islam. This was a personal decision of Hasan Ali Yücel (1897-1961), writer and publicist and an able Minister of Education, who during his eight years in office and afterwards constantly encouraged him, urging him to publish his major works (which were mostly in the form of disjointed notes, and were edited as they actually went to the printers). Maḥmūd Kemāl brought himself to sort his immense quantity of material and concentrate it only when he was officially commissioned to write (A. H. Tanpinar, *Ibnül Emin Mahmud Kemal'e dair*, in the introduction to Inal's posthumous work *Hoş sada*, Istanbul 1958, p. LIV). From 1940 until his death on 24 May 1957, he devoted most of his time to preparing, correcting and supervising the printing of his books.

Maḥmūd Kemāl was probably the last surviving example of the old-style Ottoman gentleman, who anachronistically insisted on leading the life of that extinct class and on preserving in his house the nostalgic illusion of bygone days. His genuine respect

and admiration for the Ottoman past made him ignore the changes which were taking place around him; refusing to adapt himself with advancing age, he grew more and more difficult, fussy and cantankerous, tendencies which were aggravated by his strong vanity and egocentricity. By the 1930's Maḥmūd Kemāl, who remained a bachelor all his life, had become in dress, manners, speech and personal relationships the most eccentric man in Istanbul. At the same time, he was recognized as being a 'living archive' and the greatest authority on the political and cultural history of the Ottoman Empire, particularly for the period 1870-1921, thanks to a lifetime spent in collecting and studying innumerable documents of unique importance, to associating with many key personalities of several generations and to his phenomenal memory. From his early youth he had begun to collect documents, manuscripts and antiques, and in his fifties he possessed one of the richest private collections in Turkey, housed in his family *konak* at Bayezid. When after the armistice of Mudros, the Allied forces moved into Istanbul in 1919, Maḥmūd Kemāl was given 24 hours' notice to evacuate his *konak*. Most of the documents, manuscripts and precious objects which had been stored in the house were found to be 'looted, destroyed, desecrated or lost' when the *konak* was returned to him after 18 months, as he comments bitterly in his autobiographical note (*Kendime dair*, in *Son asır Türk şairleri*, Istanbul 1930-1942, pp. 2201-42).

Maḥmūd Kemāl was little more than a child when he published his first articles in the newspaper *Tarik* in the 1880's. Encouraged by the famous writer and publicist Aḥmed Midḥat, he contributed for years to Midḥat's paper *Terdjümān-i Ḥaḳīḳat*. Henceforth his new surname Ibn al-Amin appeared regularly in many Istanbul and Salonika papers and periodicals. Pamphlets of various length followed. His writings covered the fields of religion, ethics, literature and history, and often suffered at the hands of ʿAbd al-Ḥamīd's censors. But Maḥmūd Kemāl's real contribution is in the field of biography. He essentially continued but later went far beyond the traditional Ottoman biographical pattern. In his biographies he does indeed give the usual uninspiring enumeration of bureaucratic promotions and transfers, but what he adds is always more important. With the masterly use of first-hand archive material, privately obtained documents, illuminating authentic anecdotes, relevant analogies, unbiased analyses of contemporary conditions, and insights into human psychology combined with a strong sense of humour, he often gives the most vivid, unforgettable and convincing portrait of his subject. It is remarkable that in spite of his highly sensitive temperament, his strong likes and dislikes, his prejudices, his cutting remarks about many people in his conversation, he was in his writings very conscientious, balanced and just. Perhaps it is fair to add that the close friends and patrons of his family and himself (*e.g.*, Yūsuf Kāmil Pas̲h̲a, Kāmil Pas̲h̲a, Küčük Saʿīd Pas̲h̲a) are treated with perhaps a little more sympathy and attention than others.

The text of Maḥmūd Kemāl's testament has been published in the introductory part of his posthumous work *Hoş sada* (see below). Following the tradition of many Turkish scholars, he presented to the University of Istanbul his rich private library and bequeathed his *Konak* to the *Imam-Hatip* school of Istanbul.

It was hard for Maḥmūd Kemāl to get accustomed to the new Roman alphabet (1928) with its strictly phonetic rules, and he ignored until the end the new spelling rules of modern Turkish, insisting on having his books printed in his own peculiar spelling, which tried to reproduce the historical spelling of Ottoman Turkish.

Also, like the purists of the school of Muʿallim Nād̲j̲i, he would prefer the "correct" forms of some Arabic loan-words and ignore phonetic adaptations in the present Turkish usage (*e.g.*, *iyalet*, *akriba*, *tehlüke*, instead of *eyalet*, *akraba*, *tehlike*).

Apart from minor literary productions and many pamphlets and newspaper articles, Maḥmūd Kemāl is the author of the following published works: (1) *Ewḳāf-i Hümāyūn Neẓaretiniñ ta'rīk̲h̲če-i tes̲h̲kīlātī we nüẓẓārīñ terād̲j̲im-i aḥwāli*, Istanbul 1335/1917, a history of the Ministry of Waḳfs with biographies of the ministers. Although the book was entrusted to a team, no contribution was made by his colleagues; (2) critical edition of the *Dīwān* of the 11th/17th century poet S̲h̲ayk̲h̲ al-Islām Yaḥyā, with a 65-page introduction on the life and poetry of the author, Istanbul 1334/1916; (3) critical edition of the *Dīwān* of the 19th century neo-classicist Hersekli ʿĀrif Ḥikmet, with a 78-page introduction, Istanbul 1334/1916; (4) critical edition of the *Dīwān* of the 19th-century neo-classicist Lesḳofčalī G̲h̲ālib, with a 47-page introduction, Istanbul 1335/1917; (5) critical edition of Muṣṭafā ʿĀlī's *Menāḳib-i hünerverān*, with an important introduction of 133 pp. on ʿĀlī's life and works, Istanbul 1926; (6) critical edition of Müstaḳīmzāde Süleymān Saʿd al-Dīn's *Tuḥfe-ı k̲h̲aṭṭāṭīn*, a biographical treatise on calligraphers, with an introduction in 85 pp., and notes, Istanbul 1928; (7) *Son asır Türk şairleri*, biographies (uncritically selected and of uneven value) of 19th and 20th century poets with short specimens of their work, published in 12 fascicules (1230 pages) Istanbul 1930-1942 (the original title *Kamāl al-s̲h̲uʿarā'* being changed by the Turkish Historical Society, which undertook the publication); (8) *Osmanlı devrinde son sadrıazamlar*, Istanbul 1940-49, his most important work, contains much unpublished material on the lives and times of the last 37 Grand Viziers, conceived as the sixth and last supplement (*d̲h̲ayl*) to ʿUt̲h̲mān-zāde Tā'ib's *Ḥadīḳat al-wuzarā'* (the original title, *Kamāl al-Ṣudūr*, being changed by the Ministry of Education); (9) *Son hattalar*, Istanbul 1955, a voluminous (839 pages) collection of biographies of 163 calligraphers, with copious specimens of their work and with an introduction on Ottoman biographical sources for calligraphers of the classical period; (10) *Hoş sada*, Istanbul 1958 (posthumous), on the biographies of composers of classical Turkish music of the 19th and 20th centuries. The first 128 pages are from his own pen, the remainder (pp. 129-314) compiled and completed, mainly from Maḥmūd Kemāl's notes, by Avni Aktuç. The 72-page introduction includes the text of his testament, articles by Hasan-Âli Yücel, Ahmet Hamdi Tanpınar and two of his doctors, K. I. Gürkan and M. E. Güçhan, with important data on his life, personality and character.

Bibliography: The main sources for Mahmud Kemal Inal's life and works are his own works, as listed in the article. (Fahir Iz)

INʿĀM (A.), "favour, beneficence", more specifically donatives, largesse, given to troops, etc.

The problem of keeping armies in the field, once mustered and brought forward for action, was a perennial one for Islamic rulers and commanders. Unless inducements such as extra pay awards,

promises of unusually attractive plunder, etc. could be dangled in front of the troops, there was danger that an army might disband itself and melt away once the immediate battle or object of a campaign had been achieved; not infrequently, it was difficult to get an army to fight in the first place. Whilst one Muslim army faced another Muslim army, each recruited on a similar basis and facing the same problems of recruitment, supply and deployment in the field, the difficulties common to both sides tended in the long run to equalize chances. But this problem of keeping an army in the field was a serious one for Muslim commanders during their wars with the Crusaders. The Franks had settled in their Levantine conquests and had established a feudal system on the lines familiar to them in mediaeval western Europe; their knights were accordingly kept permanently ready for war as a condition of their feudal tenure. Their Muslim opponents had to organize professional armies of mercenary soldiers, Arabs, Turkmens and Kurds, with all the attendant problems of paying the soldiers and keeping them together for lengthy periods of service (*baykār* = Pers. *paykār*), some of which dragged on for years. It says much for the heartening effect among the Muslims of the Ayyūbid Ṣalāḥ al-Dīn's leadership that he was able to lead his troops into battle year after year; here, personal influence rather than financial inducement was the key factor (cf. H. A. R. Gibb, *The achievement of Saladin*, in *Bull. of the John Rylands Library*, xxxv (1952-3), 60).

The death of a ruler or of a commander in the field was also a crisis point. Allegiance tended to be personal, to the war-leader who could inspire men and promise them booty. When these conditions no longer obtained, and unless there was an equally strong second-in-command or alternative commander to take the lead, troops frequently mutinied. In Baghdād and Sāmarrā, the palaces of the ʿAbbāsids were in the 3rd/9th and 4th/10th centuries regularly plundered at the Caliphs' deaths, and it happened similarly with other dynasties like the Būyids and Great Saldjūḳs. On the death of Djalāl al-Dawla, Amīr of ʿIrāḳ, in 435/1044, it was only the prompt action of his vizier Kamāl al-Mulk b. ʿAbd al-Raḥīm and other great men in the state and army which saved the Amīr's palace and the government headquarters from pillage by the Turks and the mob; when ʿImād al-Dīn Abū Kālīdjār of Fārs and Ahwāz died four years later whilst on campaign, his son and heir Fūlādh-Sutūn was powerless to prevent his father's treasury, his weapons and his animals being plundered by the Turks of the army (Ibn al-Athīr, ix, 353, 373-4). Even at the death of such a forceful monarch as the Saldjūḳ Sultan Ṭoghrïl (in 455/1063), disorders like these would have followed had not counter-measures been quickly adopted. The vizier, the ʿAmīd al-Mulk Kundurī, managed to prevent the dead Sultan's *ghulām*s from appropriating the store of clothing; but he had to release everything else, even down to the royal horses, to placate the army and secure the succession of his own protégé and Ṭoghrïl's designated heir, Sulaymān b. Čaghrï Beg Dāʾūd (Bundārī, 26). If the army was out in the field, as was the case with Abū Kālīdjār's death, cited above, the personal tent and treasury of the dead ruler or commander were normally the first targets for the leaderless troops, who would then abandon the campaign or siege with which they had been concerned.

Financial subsidies and presents (*inʿāmāt*) were the most obvious ways of forestalling mutinies. The troubles consequent on the death of a sovereign could often only be quelled, and the obedience of the troops gained for the new ruler, by special pay-increases, presents, promises of promotion, etc. The highest commanders might receive presents of luxurious sets of clothing and robes of honour or *khilaʿ* [see KHILʿA]. As the ʿAbbāsid Caliphs gradually fell under the control of the Turkish generals, and lost much of their independence of action, succession crises and *coups d'état* increased. Rival claimants had to secure the allegiance of the guards in the capital, and this was usually only possible through financial inducements. In the 4th/10th century, these came to be expected by the army as a matter of course whenever there was a change of régime, and they acquired the technical designation of *māl al-bayʿa* (*ḥaḳḳ al-bayʿa, rasm al-bayʿa*). These payments may be compared with the *djulūs aḳčesi* later extracted by the Janissaries from the Ottoman Sultans. Thus when al-Muḳtadir was restored to the throne in 317/929 after his second deposition, he had to pay the *māl al-bayʿa* afresh: six *nawāʾib* (? monthly allotments of pay) and an extra payment, *ziyāda*, of a dīnār for each infantryman; and a third of a *rizḳ* (*i.e.*, the pay for a period of 90 days, cf. Hoernerbach in *Isl.*, xxix (1950), 279) and a *ziyāda* of three *dīnār*s for each cavalryman (for the technical term *ziyāda*, see Khʷārazmī, *Mafātīḥ al-ʿulūm*, 64, tr. C. E. Bosworth in *JESHO*, xii/2 (1969), 143-4). When the cash in al-Muḳtadir's treasury was exhausted, the stocks of clothing and other valuables had to be sold to meet this commitment (Miskawayh, in *Eclipse of the ʿAbbāsid Caliphate*, i, 199-200, tr. iv, 224-5). Stormy or disputed successions became common under the Būyids, and accession payments became the norm. When ʿIzz al-Dawla Bakhtiyār succeeded his father Muʿizz al-Dawla in 356/967, he attempted to dispense with Daylamī support and rely on his Turkish troops. But the Daylamī leaders rebelled and demanded their normal pay plus an additional, extraordinary payment as accession money (*razḳa mansūba ila 'l-bayʿa ghayr maḥsūba*). In the end, Bakhtiyār had to compromise and give them a third of a *razḳa* (scil. a month's or perhaps six weeks' pay) as accession money. (Miskawayh, in *Eclipse*, ii, 226, tr. v, 250; cf. also Hilāl al-Ṣābiʾ, *ibid.*, iii, 159, tr. vi, 466, demands of the Daylamīs in Baṣra for accession money from Bahāʾ al-Dawla in 379/989).

In circumstances like these, the allegiance of the army would simply go to the highest and swiftest bidder. After the death of Djalāl al-Dawla, his son al-Malik al-ʿAzīz Abū Manṣūr was unable to find the required *māl al-bayʿa* quickly enough, and his cousin Abū Kālīdjār eventually stepped in and bought over the allegiance of the Būyid troops in Iraq (Ibn al-Athīr, ix, 353, cf. H. Bowen, *The last Buwayhids*, in *JRAS* (1929), 232-3). Only the strongest of rulers could avoid these payments. According to Hilāl al-Ṣābiʾ, ʿAḍud al-Dawla refused to make any additional payments above the basic allowances (*ziyādāt fi 'l-uṣūl*) except on justifiable occasions, such as after victories or when a special policy of conciliation was required (cf. C. E. Bosworth, *Military organisation under the Būyids of Persia and Iraq*, in *Oriens*, xviii-xix (1965-6), 166). Maḥmūd of Ghazna's son Masʿūd achieved the throne of the Ghaznavid empire in 421/1030, and shortly afterwards was strong enough to dispense with the *māl-i bayʿat* payment to the army; he even got back from the leading commanders the money from the state treasury which his brother Muḥammad had paid out in a fruitless

attempt to secure the army's allegiance to himself as Sultan (cf. C. E. Bosworth, ***Ghaznevid military organisation***, in *Isl.*, xxxvi (1960), 73-4).

In addition to these succession crises, soldiers were well placed for blackmailing their commanders into giving extra payments at such times as before crucial campaigns or battles. When 'Āṣim b. 'Abd Allāh al-Hilālī, newly-appointed governor of Khurāsān, was in 116/734 combatting the rebel al-Ḥārith b. Suraydj [*q.v.*], he had to placate the Arab government troops (*al-djund*) from Marw with the offer of a dīnār per head before they would engage al-Ḥārith, and then in the end raise it to three dīnārs (Ṭabarī, ii, 1579-80). In 195/811 the Caliph al-Amīn appointed 'Alī b. 'Īsā b. Māhān governor of western Persia and commander of his army there; he thought it prudent to make firm the army's loyalty by granting it a great sum of money and distributing amongst the troops 2,000 jewelled swords and 6,000 sets of robes of honour (*ibid.*, iii, 796). The Ṣaffārid Amīr 'Amr b. al-Layth kept a special treasury from which rewards could be given to outstandingly brave soldiers (cf. C. E. Bosworth, ***The armies of the Ṣaffārids***, in *BSOAS*, xxxi (1968), 549). On occasion, it was politic for a commander to single out for particular favour a section of the troops which had especially contributed to a victory. The Būyids were at times able to play off the Daylamī against the Turkish element in their armies, and so preserve a loyal following of some kind; but often, they had simply to purchase support through financial inducements. Faced by a serious revolt in 345/956-7 of the Daylamī general Rūzbahān b. Windād-Khūrshīd, Mu'izz al-Dawla had to buy the loyalty of the Turks of Baghdād, a body of his young slaves and the minority of Daylamīs who had remained faithful to him, by increased pay allowances and promotions (Miskawayh, in *Eclipse*, ii, 163, 166, 173-4, tr. v, 174, 178, 186-7; Ibn al-Athīr, viii, 386). Because of their outstanding rôle in the victory over his uncle Ḳāwurd in 465/1073, the new Saldjūḳ Sultan Malik-Shāh gave the Arab and Kurdish commanders of his army an extra share in the plunder, special honours and a distribution of land grants or *iḳṭā*'s (Bundārī, 49; Ibn al-Athīr, x, 53).

The "Mirrors for Princes" literature frequently adverts to the necessity of keeping the troops' loyalty by means of timely donatives, especially after outstanding victories or feats of valour. Kay Kā'ūs adjures the wise prince, "Pay special regard to anyone who fights valiantly, overthrows or wounds one of the enemy, seizes a horse or performs any other laudable deed. Reward such a man for his services by presentation of a robe of honour and increasing his pay; do not spare money at such a time" (*Ḳābūs-nāma*, ch. xli, tr. R. Levy, 220). Fakhr-i Mudabbir's *Ādāb al-ḥarb wa 'l-shadjā'a* has a special chapter on the obligation of the ruler or commander to reward his soldiers for special services, bravery in the field, etc., with marks of honour (*tashrīf*), financial awards (*ṣilāt, in'ām*), gifts of horses and weapons, and pensions (*nānpāra*). He goes into considerable detail about the proportionate rewards for various deeds, such as bringing in the severed head of an enemy, capturing a horse and rider together, or a horse or rider alone, leading or withstanding a charge, going out in single combat, carrying off the enemy's standard or ceremonial parasol (*čatr*), and so forth (India Office Persian Ms. 647, ch. xxxvi, ff. 126b-128a; ed. Aḥmad Suhaylī Khwānsārī, Tehran 1346/1967 (based on the British Museum Ms. alone), ch. xxx, 542-7).

Bibliography: given in the article. There are no special studies devoted to this topic.

(C. E. Bosworth)

'INĀN, poetess who was very famous in Baghdād in the second half of the 2nd/8th century. The little that is known of her life is of doubtful authenticity. She was a ***muwallada***, and was born, and received a polite education, in the Yamāma, which was to produce a little later another famous poetess, Faḍl. 'Inān was brought to live in the capital by her master, Abū Khālid al-Nāṭifī, then probably lived in Khurāsān, and died in 226/841 in Egypt (*Nisā'*, 53). She enlivened literary society during the reign of al-Rashīd, who expressed great admiration for her and wished to acquire her, but she is not mentioned under any of his successors.

She is considered as the first woman to have won literary fame under the 'Abbāsids. The ***Fihrist*** attributes to her only a ***dīwān*** of twenty leaves, of which a few poems have survived. The longest is a laudatory petition of fourteen verses addressed to Yaḥyā b. Khālid (Ibn al-Mu'tazz). These fragments show signs of a real talent. In bold language and a vocabulary which is simple but not without subtlety, 'Inān writes harminious poems in which the ideas are supported by a prudent use of the stylistic figures of *badī'*, which were fashionable at this period. Her reputation, like Faḍl's later, rested on her skill at improvisation, an attribute which found her so much fame that it forms the subject of most of the anecdotes about her. Several of her dialogues in verse with such skilled opponents as Abū Nuwās, al-'Abbās b. al-Aḥnaf and Marwān b. Abī Ḥafṣa show that she was capable in any situation of producing the rhyming repartee which established her reputation as a poet in the eyes of her contemporaries. Her profound knowledge of early poetry enabled her, in exercises in *idjāza* for example, to improvise after a verse by Djarīr a poem in the manner of that great poet (*Aghānī*, '*Iḳd*). This throws some light on the techniques of composition of certain writers who continually used a style inherited from their predecessors.

But it seems that it is mainly her role as the centre of a literary circle that should be noted. Her house was frequented by the most brilliant people, notably those of the famous group of "libertines". The brightest of them held discussions in her presence and submitted their works for her judgement. She was in addition regarded by a number of them as their inspiration. Abū Nuwās, Ibn al-Aḥnaf and Abu 'l-Naḍīr, the Baṣran attached to the Barmakids, all dedicated love-poems to her, though their sincerity is doubtful. The first addressed her with some obscenities, to which she replied with much wit and discreet allusion. The main point is that she represents a type of woman who mixed freely with writers and sometimes accompanied them to some of the places of amusement in the suburbs of Baghdād. The love which poets expressed for her was an exercise of wit rather than a true emotion. The courtly exchange, racy or even erotic, became a genre which was cultivated in emulation. It can be imagined that someone like 'Inān had a considerable influence on its development by helping to establish the rules of *cortesia* and by taking part in the flowering of the new love poetry in the second century, which was so productive of new forms.

IʿNĀT [see luzūm mā lā yalzam].

ʿĪNĀT [see suppl.].

ʿINĀYA (a.), "providence". The word which etymologically evokes the idea of care, solicitude, is not part of the Ḳurʾānic vocabulary. Nor does it belong directly to the vocabulary of *ʿilm al-kalām*, but to the language of *falsafa* (and of the *ishrāḳ* of Suhrawardī)—it was to be taken up after this by the later works and manuals of *kalām* which summarize and discuss its theses (among them al-Shahrastānī, al-Djurdjānī, etc.). It should be mentioned however that it has no place in the *Taʿrīfāt* of al-Djurdjānī. *ʿInāya* appears in the Ṣūfī lexicon, but only with the more precise meaning of divine "benefaction", or of a "gift granted" by God.

Certainly, if "providence" is understood as the order by which God conducts all things, this idea recurs throughout the Ḳurʾān. Muslim piety insisted on this; and such divine names as *al-Muhaymin* (the Vigilant), *al-Razzāḳ* (the Dispenser of all good), *al-Ḥafīẓ*, (the vigilant Guardian), *al-Muḳīt* (the Feeder), *al-Raḳīb* (the jealous Guardian), *al-Mānīʿ* (the tutelary Defender), could not fail to turn the mind towards the notion of a provident God. But it seems to have been the *falāsifa* who more precisely adopted *ʿināya* to signify divine providence. And their view of it is closely linked with their theory of "necessary and willed" creation.

It suffices to give some main references taken from Ibn Sīnā. It is he in fact who provides the clearest definitions of *ʿināya* (cf. A. M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938, no. 468, and L. Gardet, *La pensée religieuse d'Avicenne*, Paris 1951, 131-5).

The metaphysics of the *Shifāʾ* refers to it twice: concerning divine knowledge (*Ilāhiyyāt*, Cairo ed. 1960, ii, 398) and in particular in the chapter (mainly ii, 415) which deals with the introduction of evil (*sharr*) in the predetermining divine decree (*ḳaḍāʾ*). This text has been repeated in the *Nadjāt* (²Cairo 1357/1938, 284): "He [the prime Being] knows therefore the order of good according to the best order in the line of the [the being] possible, and there flows from Him that which he knows has a certain order and a good, according to the best which He knows, in a flow (*fayḍ*) which leads perfectly to order, according to the line of [the being] possible: and such is the meaning of the word *ʿināya*". (Definition reproduced by al-Shahrastānī in his refutation of Ibn Sīnā, ed. Cureton, London 1846, ii, 388).

The *Ishārāt* returned to the same theme, underlining, more clearly perhaps, its double theme of knowledge and necessity: "Providence is therefore the full comprehension which the First [God] has, in his science, of all and of the necessity for all to rest on Him so as to be according to the best order. [He fully understands also] that this comes necessarily from Him and from the total grasp which He has of it" (ed. Forget, Leiden 1892, 185; Fr. tr. A. M. Goichon, Beirut-Paris 1951, 458). It is characteristic that these lines are presented as a "remark" (*tanbīha*) in the chapter which deals in general with knowledge (see another text, *ibid.*, 160).

This conception of *ʿināya* cannot accommodate either God's liberty or gratuity, a fact which accords perfectly with the existential determinism of Ibn Sīnā. Certainly providence, in its obvious sense must be understood, he says, from "the thought by the First of what is good and just", and the divine thought is what produces beings (cf. *Sharḥ Kitāb Uthūlūdjiyā*, ed. ʿA. Badawi, in *Arisṭū ʿind al-ʿArab*, Cairo 1947, 63). It may be objected that the coming into being of existing things from the prime Being is "a simple overflow (*inbidjās*) which has no connexion with the thought which He has of them, even although this thought accompanies it". (*ibid.*; Fr. tr. G. Vajda, in *Revue Thomiste*, ii (1951) 389). Ibn Sīnā replies by distinguishing between the necessary *ab alio* (in the order of existence) and the possible (in the order of essence). He concludes: for things, "the best becomes one of the possible things for them, after the best having been thought necessarily. This is providence, that is to say, the thought of the best possible" (*ibid.*, tr. 390). And again: "His [the prime being's] essence is that from which necessarily derive the things which have the possibility of deriving from it because He thinks them. It is thus that providence succeeds in becoming providence" (*ibid.* 64/390-1).

The idea of providence as divine knowledge which is a realization of the good and just ordering of existing beings is thus clearly settled. But Avicennan determinism makes this ordering, whatever its "possibility" may be as regards the essence of things, into an existential necessity: which the prime Being knows and wills, but which He could not refrain from producing and which He could not modify. When the later Ashʿarī manuals debated *ʿināya* according to the *falāsifa*, this was in order to oppose to this providence which is (and is no more than) a necessary producing knowledge, the productive gratuitous dispositions of the free will of the Most High. It is true that they do not distinguish at all between common providence and particular decree. Everything is providence, and everything is decree (*ḳadar* and *ḳaḍāʾ*). It is the chapters on *ḳadar* and *ḳaḍāʾ* which deal with the designs and the government of God.

Finally it may be added that the Ṣūfī vocabulary contrasts *maḥabba* (or *ʿishḳ*) and *ʿināya*. According to al-Ḥallādj, love is "a perennial (*sarmadiyya*) attitude" and a pre-eternal liberality (*ʿināya azaliyya*; cf. L. Massignon, *Passion*, 610; Massignon here translates *ʿināya* by "*grâce*"). Al-Hudjwīrī, in his *Kashf al-maḥdjūb*, referred to *ʿināya* in the sense of divine favour (Nicholson translates this sometimes by "grace", sometimes by "favour"; Eng. tr. Leiden-London 1911, 203, 268).

ʿINĀYAT ALLĀH KANBŪ, elder brother of Muḥammad Ṣāliḥ Kanbū, author of *ʿAmal-i Ṣāliḥ* or *Shāhdjahān-nāma*, a history of the Moghul emperor Shāhdjahān [*q.v.*], was born at Burhānpūr [*q.v.*] on 19 Djūmādā I 1017/31 August 1608, though his ancestral home was at Lahore. How and when his parents came to Burhānpūr is not known. His father seems to have died at an early age, when the family returned to Lahore. Himself well-educated, he attended to the education of his orphaned younger brother, who speaks of him in very affectionate terms and calls him his patron.

In early life he held an office under the Moghul

viceroy of Lahore, where his younger brother also was employed; he married and had children, but in later life he renounced the world, became a recluse, and went to Delhi, where he passed his time in prayer, meditation and fasting in a *kh̲ānḳāh*, built by himself, beside the tomb of Ḳuṭb al-Dīn Bak̲h̲tiyār Kākī. A historian, writer and poet, he is the author of: (1) *Taʾrīk̲h̲-i Dil-kus̲h̲ā*, a history of S̲h̲āhd̲j̲ahān and his predecessors, with the usual narrative from Adam to the beginning of the Mog̲h̲ul rule in India; it is still in MS; (2) *Bahār-i dānis̲h̲*, a collection of romantic and lascivious tales dealing with the tricks employed by faithless wives to deceive their doting husbands, on which his fame mainly rests; completed in 1061/1651 it has been described as "pearls strung on a cord of coarse grass"; it is in fact a Persian version of some Indian folktale which the author had heard from a native Brahmin (ed. Calcutta 1809, 1836, Delhi 1849, Bombay 1877, Lucknow n.d.). It was translated into English by Alexander Dow (London 1768), Jonathan Scott (Shrewsbury 1799), and into German by A. T. Hartman (Leipzig 1802).

He died at Delhi, on 19 D̲j̲ūmādā I 1082/23 September 1671. Both Laṭīf (*Lahore*, 209) and Čis̲h̲tī (*Taḥḳīḳāt*[3], 1309) however state that he was buried in Lahore in a tomb built by himself during his lifetime, in which also was later buried his younger but more famous brother.

INCEST [see nikāḥ, zinā].

INCUBATION [see istik̲h̲ara].

INDIA [see hind].

INDIAN NATIONAL CONGRESS. The first session of the Indian National Congress was held in Bombay in December 1885. It was a gathering of English-educated, middle class Indians—Hindus, Parsis, and Muslims—who formed themselves into an All-India political organization.

Projected as the "National Assembly of India" and as the basis of an Indian Parliament, the Congress set out to promote Indian national unity and sought Indian representation in the British Government of India. The Congress asserted that it was a secular organization and emphasized that it voiced the political grievances and aspirations of the people of India irrespective of their religious denomination. In particular it claimed to embody and represent the Muslims.

The Muslims were divided in their attitude to the Congress between two incompatible schools of thought, one stressing the common interests between Muslims and Hindus, the other emphasizing the cleavages between the two communities. The first school of thought was exemplified by Badr al-Dīn Ṭayyibd̲j̲ī, who presided over the third session of the Congress. He called upon Muslims to regard the Congress as a "truly representative national gathering", promoted co-operation between Muslims and Hindus, and urged Muslims to identify themselves with the objects of the Congress. Although these views appealed to only a small section of the Muslim community, they were advocated throughout the history of the Congress by prominent Muslims, notably Dr. M. A. Anṣārī, Mawlānā Abu 'l-Kalām Āzād, and Dr. D̲h̲ākir Ḥusayn, who felt no contradiction between their Islamic way of life and their membership in the Congress. However, most Muslims dissociated themselves from the Congress: they were convinced by Sir Sayyid Aḥmad K̲h̲ān that the Congress was a sectarian organization designed to advance the exclusive interests of the Hindus, and they shared Sir Sayyid's apprehensions that the Congress was striving to establish Hindu rule, in which the Muslims would be a deprived minority.

The Congress endeavoured to attract the Muslims to its annual conventions and resolved to drop any subject to which Muslims objected. Moreover, the Congress did not extend its official approval to the popular agitation against the partition of Bengal which was permeated with Hindu religious fervour; nor to the anti-Muslim activities of the Ārya Samād̲j̲ in the Pand̲j̲āb; nor to the militant anti-Muslim festival of Śivāji and the Cow-Protection Association in Mahārās̲h̲ṭra. Nevertheless, most Muslims saw in the Congress a Hindu movement. Since Muslims lagged behind Hindus in acquiring western education, in taking advantage of the new economic opportunities and in forming a political organization, they became particularly conscious of their backwardness and were anxious to accelerate the advancement of their interests by claiming special minority rights.

Notwithstanding the foundation of the Muslim League [*q.v.*] in December 1906, and the provision of separate electorates for the Muslims by the India Act of 1909, the Congress continued to claim that it alone represented the people of India.

For a brief period Muslims and Hindus jointly supported the Home-Rule League in 1916 and co-operated in 1920 in the K̲h̲ilāfat and Civil Disobedience movements. But when the Civil Disobedience movement was stopped by Gāndhī without consulting the Muslims, and when the K̲h̲ilāfat movement collapsed after Atatürk abolished the Caliphate, the Muslims became depressed and frustrated, and the brief reconciliation between Muslims and Hindus turned into discord and antagonism.

When the Nehru Report was published in 1928, the Muslim League regarded the refusal of the Congress to recognize special electorates for the Muslims as proof of its contention that the Muslims would be a deprived minority under Congress rule. The fears of the Muslim League were intensified when the Congress overwhelmingly won the 1937 elections, formed seven ministries, and stipulated that it would accept Muslim representatives into its ministry of the United Provinces only if they merged into the Congress.

While Nehru dismissed the complaints of the Muslim League of discrimination against Muslims in the Congress Ministries as side issues which weakened the struggle for *Swarāj* (self-rule), M. A. D̲j̲ināḥ rallied the Muslims to the Muslim League with the warning that *Swarāj* meant Hindu-*rāj*. While the Congress promised the Muslims equality of rights, the Muslim League argued that since the Hindus were better educated, more prosperous, and more enterprising than the Muslims, "equality" meant the perpetual inferiority of the Muslims as well as constant economic and political oppression. While the Congress assured the Muslims of religious toleration, the Muslim League warned the Muslims that they might be absorbed into Hinduism and lose their identity, and that therefore any Muslim who was not with the Muslim League was a traitor to Islām. Nevertheless, the Congress courted Muslim members, many of

whom attained eminence in the Congress party; this position still holds.

Until 1940 the Muslim League endeavoured to gain special rights to safeguard the interests of the Muslims as a minority; from 1940 it asserted that Hindus and Muslims were two different nations and that the Muslim League, and it alone, represented the national aspirations of the Muslims which aimed at the establishment of a national home. The Congress rejected the equation of religion with nationalism and accused the Muslim League of working up religious animosity for political ends. However, the 1945 communal riots widened the gulf between the Muslim League and the Congress, and the schism reached its climax in 1947 in the partition of India and the foundation of Pakistan.

INDIAN OCEAN [see baḥr al-hind].

INDIGO [see nīl].

INDJĪL, Arabic transcription of the word εὐαγγέλιον, gospel, through the Ethiopian *wängel* (Nöldeke, *Neue Beiträge*, 47; Grimme, in *Festsch. Goldziher*, 164; Jeffery, *Foreign Vocabulary of the Qur'ān*, 71-2). The variant *andjīl* may arise from a Mesopotamian Persian influence.

The word *indjīl* occurs twelve times in the Ḳur'ān (III, 2, 43, 58; V, 50, 51, 70, 72, 110; VII, 156; IX, 112; XLVIII, 29; LVII, 27) and refers to the Revelation transmitted by Jesus. The word also means the scripture possessed and read by the Christian contemporaries of Muḥammad (V, 51; VII, 156), *i.e.*, the four Gospels, often extended in current usage to mean the whole of the New Testament. The confusion to which this gave rise in later controversies was often solved, on the Muslim side, by accusing the Christians of having "corrupted" the original Gospels (cf. especially Mingana, *Woodbrooke Studies*, ii, (1928), 35-6).

In this article there will be studied successively: I. The relations between the Ḳur'ān and the Gospels; II. The place of the Gospels in *ḥadīth*; III. The knowledge of the Gospels possessed by Muslim writers; IV. The place of the Gospels in Ṣūfism; V. The Islamo-Christian controversy over the Gospels.

I. The Gospels and the Ḳur'ān. There appear in the Ḳur'ān a certain number of Gospel characters: Jesus, Mary, St. John the Baptist (Yaḥyā), Zacharias, the Apostles, and a certain number of facts (the Annunciation, the miracles of Jesus) whose resemblance to the Gospels is striking, so that the question arises of how exactly they are related to the Gospels, which preceded them.

For believing Muslims this question presents no difficulties: it is the same God Who reveals both books, and the Prophet Muḥammad, having received the Revelation directly from God, had no need to consult, directly or indirectly, the Scriptures in order to be able to reproduce some of the features which are found in them.

The historian of religions however feels obliged by his discipline to seek for possible historical connexions. The first question is therefore: what knowledge could Muḥammad and the first Muslims have had of the Gospels? This leads to the question of the translation of the Gospels into Arabic, since any knowledge of Greek, Syriac, or Coptic on the part of Muḥammad and his Companions may be excluded.

In a memoir presented to the *Reale Accademia dei Lincei* in 1888 (see *Bibl.*), Ignazio Guidi raised the question whether the Gospels had been translated into Arabic before the advent of Islam. Sprenger (*Das Leben und die Lehre des Moh.*, i, 131 ff.) thought he recognized in a passage of Muḥammad b. Isḥāḳ (ed. Wustenfeld, 149-50) a fragment from a translation made before the time of Muḥammad. The fragment contains John XV, verses 23-27, and the word which is used in them to translate παράκλητος is *al-m-n-ḥ-mnā*, which is neither Arabic nor Syriac but Palestinian and probably quite early (cf. Gildemeister, *De evang. in arabic.*, 35). According to a text of Bar Hebraeus (*Chron. eccles.*, ed. Abbeloos and Lamy, i, 275; Assemani, *Bibl. orient.*, ii, 335; cf. Gildemeister, *op. cit.*, 30, note 1), a translation was made between 631 and 640 A.D. by the Monophysite Johannes on the instructions of an Arab ruler, ʿAmr b. Saʿd. But these first translations, if they existed, amount only to isolated and disputable details.

On the other hand, extant manuscripts attest that from the 2nd/8th century, Arabic versions of the Gospels were in the hands of the Christians of Syria. The many manuscripts of the Gospels in Arabic may be divided into six classes: (A) Those which were translated directly from the Greek. They originate from the monastery of Saint Sabas or from near there; two of them (Vatic. arab., 13, of the 8th cent. and manuscr. Borgia, K. 11, 31 8th or 9th century) are the oldest known. (B) Texts translated from the Peshitta, or at least revised on the basis of this Syriac version. These are of different periods (Tischendorf manuscript at Leipzig, 8th-9th century; Codex Vaticanus, 13). The translation of the *Diatessaron* of Tatian was made in the 5th/11th century by Ibn al-Ṭayyib. (C) Texts translated from the Bohairic Coptic translation or modified according to it (*Codex Vaticanus*, copt. 9). The passages from the Gospels mentioned in the *History of the patriarchs of Egypt* by Ibn al-Muḳaffaʿ [*q.v.*] (4th/10th century) are based on the Coptic translation, perhaps in the form of lectionaries. The same or a similar Coptic version seems to have been used by al-Ghazālī in *al-Radd al-djamīl* (cf. R. Chidiac, *Réfutation excellente de la divinité du Christ*, Paris 1939). (D) Texts of eclectic recensions, made in the 7th/13th century in the patriarchate of Alexandria to become the canonical versions. The first work on this was done circa 650/1250 by al-Asʿad Abu 'l-Faradj Ibn al-ʿAssāl. (E) Texts which are distinguished by their more particularly literary form (Leiden MS 2348 and those in the Vatican, cod. arab. 17 and 18). The two latter, in a translation into hymed prose, date from the end of the 4th/10th century. Other versions in the same genre were made later. (F) Arabic versions of Western origin (cf. H. Hyvernat, in *Dict. de la Bible*, i, col. 851-6).

We may thus conclude, with Graf (*Geschichte*, i, 41) that in the present state of knowledge it cannot be asserted that Muḥammad and his first companions could have had a direct knowledge of the Gospels in Arabic.

In addition to the canonical Gospels, there exist

Arabic recensions of the New Testament apocrypha: the Gospel of the Childhood, the Protevangelium of James, the Apocalypse of Paul, the Preaching of Peter and a sermon of Simon, a martyrdom of James and one of Simon, and a small number of others which do not appear to have been known in Muslim circles. Rubens Duval, *La littérature syriaque*, Paris 1899, 96, mentions an apocalypse of St. Peter as being an Arabic composition of the 7th/13th century.

The spread in Arabia of Christian ideas in addition to the narrative accounts of the Gospels and the apocryphal books, before the arrival of Islam, took place largely, if not entirely, through oral teaching and the exchanges of everyday life. There existed in the Yemen a Christian community (cf. Nallino, *Ebrei e Christiani nell' Arabia preislamica*, in *Raccolta di Scritti*, iii, 122-9), which was in active rivalry with the Jews and had close relations with the Ethiopians. The occupation of the Yemen by the latter certainly strengthened the position of this community.

In the north-east, the influence of the Nestorian church spread from al-Ḥīra, whence it was carried not only by the monks and perhaps by preachers, but also, although more superficially, by the poets who frequented the court of the La<u>kh</u>mid princes. In addition, the Christian or Christianized poets of the Ḥi<u>dj</u>āz, Zayd b. ʿAmr b. Nufayl and Waraḳa b. Nawfal of Mecca, and Umayya b. Abi 'l-Ṣalt of Ṭāʾif, are represented as having relationships wit the Christians of the Yemen and of Syria, whereas the <u>Gh</u>assānid princes or the tribes which were under their influence had adopted Monophysism. It is even stated in the *A<u>gh</u>ānī* (iii, 14) that Waraḳa, the cousin of <u>Kh</u>adī<u>dj</u>a, wrote translations or copies of the Gospels.

It is thus probable that the passages in the Ḳurʾān which reflect the canonical or apocryphal Gospels derive from these Christian communities, and this possibility is confirmed to a great extent by the large proportion of Ethiopian and South Arabian terms which they contain (see, *e.g.*, V, 112-3). The greater part of these passages describe the births of Jesus, of Mary and of John the Baptist, the misssion, the miracles and the ascension of Jesus [see ʿĪSĀ, MARYAM, YAḤYĀ]. There are also references to several parables, for example the parable of the Sower (XLVIII, 29), that of the wise and foolish virgins (LVII, 13), the prophecy of the announcement of another Apostle (VII, 157) and to several other passages. More surprising, but not intrinsically improbable, given the rivalry between Jews and Christians in the Yemen, there are also echoes of the arguments directed against the Jews in the Gospels and the Epistles, which, as has been pointed out by Tor Andrea and Ahrens (see *Bibl.*), are sometimes used in the Ḳurʾān as much against the Christians as against the Jews.

II. The influence of the New Testament on tradition (*ḥadī<u>th</u>*) is important. A number of the miracles, proverbs and ideas attributed to Muḥammad or to his followers have their source in the Gospels. For example, Muḥammad increases the amount of some water or supplies of food. Many traditions on the dignity of the poor and the difficulty for the rich to enter the Kingdom of Heaven reflect the teaching of the Gospels and are in contrast with the attitude of the pagan Arabs. Goldziher mentions an adaptation of the *Paternoster* which an Arab traditionist puts into the mouth of Muḥammad (Abū Dāwūd, i, 101). The parable of the Labourers in the Vineyard (Matthew, XX, 1-16) is applied to the Jews, the Christians and the Muslims in the *Muwaṭṭaʾ* of Mālik (*riwāya* of al-<u>Sh</u>aybānī, *bāb al-tafsīr*). Similarly in the legends on the Mahdī and in eschatology, apocalyptic literature had an important part.

III. As Islam spread in the formerly Christian countries and contact between Christians and Muslims became more frequent, the Muslims gained a deeper knowledge of the Gospels. Thus several Muslim historians display a fairly extensive knowledge of them. Al-Yaʿḳūbi, one of the earliest Arab historians, quotes an extract from them; al-Masʿūdī, who had an enquiring mind, makes no secret of his relations with the Christians; he mentions visiting, in Nazareth, a church much venerated by the Christians, and he learned from them a number of Gospel traditions; he knew of the birth of Jesus in Bethlehem, his childhood in Nazareth, God's words reported in Matthew III, 17: "This is my beloved son . . .", of which he reproduces a variant; he had also heard the story of the visit of the Magi to the infant Messiah, according to the Gospels and other versions; he gives accurately the account of the calling of the Apostles; he names the four Evangelists, and refers to the "book of the Gospels" as if he had seen it, giving an exact summary of it, though exhibiting a certain mistrust of it, as compared with the respect with which it is treated in the Ḳurʾān. Similarly al-Masʿūdī is relatively well-informed concerning the lives of the Apostles. He twice mentions the martyrdom of St. Peter and of St. Paul, but attributing to both the type of execution which, according to tradition, was that suffered by St. Peter; St. Thomas is known as the apostle of India, he seems moreover to be the apostle who, after St. Peter, was best known to the Muslims; even St. Paul was less well known.

Even better informed than al-Masʿūdī is al-Bīrūnī. This writer must have consulted Christians in order to write his Chronology. Several texts of the Gospels were known to him, as well as the commentary by Dādīshoʿ (Jesudad, cf. Duval, *Litt. syr.*[2], 84) and he mentions it with some criticism. He regarded the four Gospels as four recensions, which he compares to the three versions of the Bible, Jewish, Christian and Samaritan, remarking however that these four recensions differ greatly from each other. This author reproduces in full the genealogies of Joseph given by Matthew and Luke, and, in a very interesting passage, he mentions how the Christians explain the difference between them. After this he mentions other gospels in the possession of the Marcionites, the Bardesanites and the Manicheans, the first two, according to him, differing "in some places" from the Christian Gospels, the others being contrary to them. Given all these differing versions, he considers that the prophetic value of the Gospels is not greatly to be trusted.

The Persian version of the *Chronicle* of al-Ṭabarī (Fr. tr. by Zotenberg) contains some legends on New Testament subjects more developed than in the Arabic original and similar to those found in the "Stories of the prophets" (*Ḳiṣaṣ al-anbiyāʾ*). Certain details concerning the Passion are related in it: the denial of "Simeon", the betrayal of one of the Apostles, who is not named, Mary's station at the foot of the Cross. The author admits however, following Muslim belief, that there was substituted for Jesus some other person, whom he calls Joshua. Concerning the Apostles, he reproduces the tradition that makes John travel to Edessa.

IV. In Muslim mystic literature are found many references to the Gospels and there can be detected some knowledge of the interpretation given

to certain passages by the Christian Fathers. Nevertheless the words which the Muslim mystics attribute to Jesus are far from always agreeing with the Gospels; thus those reported by al-Ghazālī and collected by Asin Palacios (see *Bibl.*) are almost all inexact. On the other hand, al-Muḥāsibī and al-Suhrawardī give an exact and complete transcription of the parable of the Sower. The writings of the Ikhwān al-ṣafā' contain some remarkable passages on the crucifixion of Jesus (Cairo ed., iv, 97), the reality of which they admit, and on the Resurrection, the meetings of the Apostles in the Upper Room and their dispersal throughout the world. The Acts of the Apostles (*afʿāl al-ḥawāriyya*) are expressly quoted in this work (Dieterici, 605). For other features, cf. L. Massignon's *Ḥallāj*: there exists a miniature showing al-Ḥallādj on the cross with the face of Christ; also the fine epic romance of Ḥamza (*Sīrat al-amīr Ḥamza*, Cairo n.d., iii, 822 f.).

V. Islamo-Christian controversies about the New Testament. The basic dogmas of Christianity, such as the Trinity, the Incarnation and the Redemption, based essentially on the New Testament, very soon gave rise to polemic between Christians and Muslims, each party trying to prove that its attitude was based on truth.

From the Muslim side, attacks were made chiefly on the authenticity of the Gospels and it was stated that they had undergone *taḥrīf* [*q.v.*]: the meaning or words distorted, passages suppressed, others added, etc. They said that Jesus had never stated that he was God; the Trinity and the Redemption were doctrines invented by St. Paul. Recent polemicists (19th and 20th centuries) added as sources for the Christian attitude Greek philosophy and the pagan mysteries or the religious beliefs of India.

Using the earlier works of Hottinger, Marracci, Reineccius, Fabricius, Calemberg, Schnurrer and some manuscript sources, Moritz Steinschneider published, in 1877, his *Polemische und apologetische Literatur*. But the first comprehensive study on Muslim polemic was made by E. Fritsch in his doctoral thesis entitled *Islam und Christentum im Mittelalter* (Breslau 1930). The author studied ten or so Muslim authors who wrote polemical treatises against the Christians, among others, al-Hāshimī (circa 205/820), ʿAlī b. Rabban al-Ṭabarī (211/855), al-Djāḥiẓ (255/868), Ibn Ḥazm (456/1064), al-Ḳarāfī (684/1285), Ibn Taymiyya (728/1328), who devoted four volumes to the refutation of Christianity (*al-Djawāb al-ṣaḥīḥ li-man baddala dīn al-Masīḥ*). It is clear that in all these works it is mainly the scriptural texts which were being discussed.

From the middle of the 19th century, Protestant missionary activity became more intense and, in order to prove the authenticity of Holy Writ and in particular of the Gospels, attacked the traditional Muslim attitudes (cf. the *Mīzān al-ḥaḳḳ* of Karl Gottlieb Pfander, 1865). It was not long before a massive and vigorous counter-attack was launched, making use of the extreme results which had been obtained by Western hypercriticism (cf. the *Iẓhār al-ḥaḳḳ* of Raḥmat Allāh al-Hindī, published in 1867). The appearance of a forgery entitled the "Gospel of Barnabas" (Arabic tr. 1908) put into the hands of the Muslim polemicists, especially those of the school of the *Manār*, a new weapon, whose effects on the ordinary public and even on some insufficiently informed members of universities are felt even today (J. Jomier, *L'Evangile selon Barnabé* in *MIDEO*, vi (1959-61), 137-226).

There is apparent however in some contemporary authors the desire to adopt in part, in particular in matters relating to the Gospels, Christian attitudes. There should especially be noted in this respect the works of Maḥmūd al-ʿAḳḳād (*ʿAbḳariyyat al-Masīḥ*, Cairo 1952) and the *Ḳarya ẓālima* of Kāmil Ḥusayn, Cairo 1954, both of them largely based on the Gospels. For details of all this see Anawati, *Polémique*, etc.

INDJŪ. This name, properly speaking the term (Turkish *indjü*) applied to royal estates under the Mongols, is usually given to the dynasty which reigned *ca.* 703/1303-758/1357 in Fārs (Shīrāz), the founder of the dynasty, Sharaf al-Dīn Maḥmūd-Shāh, having been sent thither by Öldjeytü to administer the royal estates. According to the *Taʾrīkh-i Guzīda* he was a descendant of ʿAbd Allāh Anṣārī [*q.v.*]. Under Öldjeytü's successor Abū Saʿīd he not only retained his office but was able to extend his power so that by *ca.* 725/1325 he was practically the independent ruler of Shīrāz and almost the whole of Fārs. After the death of Abū Saʿīd, he was executed by the order of his successor Arpa Keʾün in 736/1336. According to the *Shīrāz-nāma* he had four sons: Djalāl al-Dīn Masʿūd-Shāh, Ghiyāth al-Dīn Kay-Khusraw, Shams al-Dīn Muḥammad and Abū Isḥāḳ Djamāl al-Dīn. The first named was already ruling in Shīrāz during his father's lifetime down to *ca.* 735/1335, when in his absence his brother Kay-Khusraw took his place, refusing upon his return to restore him his authority. Hostilities then broke out between the brothers ending only in 739/1338-9 with the death of Kay-Khusraw. Masʿūd-Shāh had imprisoned the third brother Muḥammad in Ḳalʿa-yi Safīd, but he managed to escape and enlist the support of the Čobanid Pīr Ḥusayn. The latter collected a Mongol army and advanced on Shīrāz with Muḥammad; Masʿūd-Shāh was forced to flee, and Pīr Ḥusayn entered the town. When, shortly afterwards, in 740/1340, he put Muḥammad to death, the population adopted so threatening an attitude that he found it advisable to withdraw, but only to return the next year at the head of fresh forces. On this occasion also luck was against him; he quarrelled with the Čobanid Ashraf and, when the two sides were drawn up in line of battle, was left in the lurch by his own men and sought refuge with Ḥasan-i Kūčak [*q.v.*], by whom he was put to death. Meanwhile, Masʿūd-Shāh had made his way to Luristān, where he allied himself with Yaghī-bastī, a brother of Ashraf, while Ashraf himself took the part of Masʿūd-Shāh's sole remaining brother Abū Isḥāḳ. Masʿūd-Shāh, with Yaghī-bastī's aid, succeeded in reaching Shīrāz, where he met the same fate as his brother Muḥammad: he was treacherously murdered by Yaghī-bastī in 743/1343. The latter then quarrelled, and was reconciled again, with Ashraf; and they were engaged in a joint attempt at the subjugation of Fārs when the news of their brother Ḥasan-i Kūčak's death caused their troops to disperse. Abū Isḥāḳ, who had previously received the town of Iṣfahān from Pīr Ḥusayn, now became the ruler of Shīrāz and the whole of Fārs. As he endeavoured to extend his rule over Yazd and Kirmān, he came into conflict with the Muẓaffarids [*q.v.*], with varying success. The final result was that Abū Isḥāḳ was not only driven from Yazd and Kirmān but was besieged in Shīrāz itself, which surrended to the Muẓaffarids in 754/1353. Before the surrender he had escaped to Ḳalʿa-yi Safīd and, receiving some support from Ḥasan-i Buzurg, made his way to Iṣfahān. Besieged once again, he was taken prisoner and handed over for execution to the relatives of a *shaykh* who had been put to death by his orders. This was in 758/1357. The Persian poet ʿUbayd-i Zākānī has commemorated his patron in a *marthiya* or elegy.

INDOCHINA (Islam in). The union of Indochina, created by a decree of 19 October 1887, was definitively completed and organized under the governorship of Paul Doumer (February 1897-March 1902). Embracing a vast territory of 740,000 square km., with no geographical unity, extending from China to Siam and bordered by both the Pacific Ocean and the Indian Ocean, it ceased to exist in 1945, to become the states of Cambodia in the south west, Laos in the north west and Vietnam in the east.

The population of this region, estimated at 16 millions at the beginning of the 20th century, has grown considerably since then. In 1930 there were 2,500,000 Cambodians, 1 million Laotians and 17 million Vietnamese (7,500,000 in Tonkin, 5,000,000

in Annam and 4,500,000 in Cochin China: these three countries had formed in the 19th century the empire of Vietnam, given this name in 1804). Exact statistics are not available, but it is generally agreed that in 1969 Cambodia has nearly 4 million inhabitants, Laos about 1,500,000 and Vietnam at least 26 million. These numbers include about 500,000 Chinese or persons of Chinese origin, and slightly under a million people belonging to the ethnic minorities (still often and incorrectly called *Kha* by the Laotians, *Moi* by the Vietnamese and *Pnong* by the Cambodians, words meaning "boor, mountain-dweller, wild man") variously divided, according to the three states, with the Chinese in the urban centres and the minorities on the plateaux.

The dominant religions and philosophies are still Buddhism, Confucianism and Taoism. In Cambodia and Laos, (Hinayana) Buddhism, the state religion, is widely practised. In Vietnam, spirit worship is really the dominant religion and (Mahayana) Buddhism, although attracting the majority of the population, has neither the unity nor the purity which it has in the two neighbouring countries. There should be mentioned furthermore the tolerant and also syncretic character of the Vietnamese, who are well able to embrace philosophies of various origins: an example of this is the birth in about 1925 of Caodaism, which aims to group under the authority of one single God all the existing religions, and possessed in 1969 two million adherents, the majority in South Vietnam. The Catholics, the majority of whom also are in Vietnam, are almost as numerous. Animist beliefs remain active among the ethnic minorities. Finally it should be mentioned that Hinduism, which flourished for ten centuries in Cambodia, is now practised, and that in a more or less degenerate form, only by the Hindu minority (Tamils and Bengalis) and in particular by the majority of the Cham (pronounced *tyam*; see ČAM) of Vietnam, while the rest of them, with the Cham of Cambodia, the Malays and a certain number of Tamils, are Muslims.

Even during the periods of greatness of the Shampa [see ṢANF], Islam never held a position of first importance in Indochina. Deeply influenced by Indian civilization, the Cham practised mainly Hinduism and, to a lesser extent, Buddhism, often combining the two religions. But these cults have been almost abandoned. Today almost all the Cham of Cambodia are Muslims, as are nearly half of those who live in the south of Central Vietnam and who describe themselves as "the original Cham".

No exact date has yet been given for the appearance of Islam in Shampa. It is known that Arab traders reached as far as China in the 1st/7th century, and it is probable that during their journeys they visited the shores of Annam. They may then have converted some natives to their religion. E. Huber (in *Bulletin de l'-École Française d'Extrême-Orient*, iii, 55, no. 1) quotes in support of this idea a passage from the "Annals of the Song" in which the invocation *A lo-ho ki-pa*, meaning "May it soon be re-born!" pronounced on the occasion of the sacrifice of a buffalo to the Spirits, is reminiscent of the formula *Allāh akbar* of the Muslims. Two Kūfic inscriptions of the Shampa, one to be dated "between 1025 and 1035" and the other to 1039 A.D. (P. Ravaisse, in *JA*, xx/2 (1922), 287), indicate that Muslims had settled in the south of the Shampa by the 4th/10th century. But there is still no basis for referring to a conversion of the Cham to Islam.

Neither historical records nor legends suggest that the religion of Muḥammad was widely adopted by the Chams before their kingdom was absorbed by the Vietnamese in the 9th/15th century. It may reasonably be thought that it developed rather among the Cham refugees in Cambodia in the 15th century, and that this occurred through the intermediary of the Malays, their brothers in race, after the Malay immigrations of the 14th and 15th centuries. And these Muslim Cham of Cambodia tried, it seems, in their turn, to propagate Islam, with relatively little success, among their brothers remaining in Central Vietnam.

Muslim Cham and Malays in Cambodia, from the 17th to the 19th century, built mosques, made converts, fomented troubles and even took part in the political life of the country. It was thus that, in 1820, one of them, Tuan Sait Ahmit (= Shaykh Aḥmad), became viceroy before being put to death by his political adversaries. After the establishment of the French protectorate (1863), they formed in Cambodia as in south Vietnam (Châu-Dôc, Saigon, Phan-Thiêt) fairly closed communities living apart from their Cambodian and Vietnamese compatriots.

There is little original about their observance of Islam and they share the beliefs of the Cham and the Malays. All observe the five prayers, the ablutions, and circumcision at the age of 15; they abstain from the flesh of pigs, dogs, tortoises, crocodiles, elephants, peacocks, vultures, eagles and crows, and also from strong or fermented drinks. If any one worships a strange idol, he is expelled from the community. Some make the pilgrimage to Mecca or pay a certain sum, for which a representative is sent on their behalf. In Cambodia the mosques are almost always built of wood and are placed on slight eminences. The finest are large bare rooms with a platform at the back. The mats which are used as praying carpets are hung up in a sack from the rafters. On the left at the entrance there is usually a large drum painted red (Cham *ganŏng* = Malay *gendang*, Javanese *keṇḍang*). Outside is a little basin of masonry for ablutions.

Within these precincts the imāms give the children instruction in reading Arabic and in reciting the Ḳur'ān. The assembly or *djamʿa* cannot take place without a quorum of 40 believers. Ramaḍān is strictly observed by all, and pious families are quite abstemious in this period. On Mondays they refrain from sexual intercourse.

The Chams of Cambodia also observe the *bulan ŏk hajī* (fasting month of the pilgrims) also called *bulan Ovlah* (month of Allāh) three months after Ramaḍān. They also observe the *molot* or *melut* (cf. Achenese *mò'lot*; Arabic *mawlud*), when a lock of hair is cut from the children of 3 to 13 and they are given a religious name, which for boys is always ʿAbd Allāh or Muḥammad, for girls Phwatimŏḥ (Fāṭima). The imāms, at least four in number, are invited to pray in the house in which the ceremony is being performed. This custom of hair cutting seems to be borrowed from the Cambodians.

The *tamat* (Arab *tamma*) is a ceremony nearly always confined to the family circle, at which a boy who has learned the Ḳur'ān entirely by heart, which however happens very rarely, is led round the village on horseback amid the acclamations of men and women. He is dressed in his best clothes and is greeted with the greatest reverence by men and women.

The *suraḥ* (pursuit), which is celebrated in the first Cham month, is accompanied by two days'

fasting and commemorates the migration of the Prophet (*Hidjra*).

By the *tapat*, which we also find among the Chams of Annam, who call it *tubah* = Ar. *tawba*, old persons are purified from their sins by means of prayers and sprinkling with holy water.

Malays and Chams have common religious officials in Cambodia, who are given the following names according to their office.

Malay	Cham	Function
1. *mufti*	*möphati*	jurist
2. *tuan kadli*	*tuḥ kalik*	judge
3. *raya kadli*	*rajak kalik*	judge
4. *tuan pakih*	*tuan paké*	jurist
5. *hakim*	*hakem*	doctor
6. *kĕtip*	*katip*	preacher
7. *bilal*	*bilal*	*mu'adhdhin*
8. *lĕbai*	*lebĕi* [1]	officiant

All are exempt from taxation. The four first have the following Cambodian names: 1. *okñà răčă koley*, 2. *okñà raya koley*, 3. *okñà tok koley*, 4. *okña paké*. They are appointed by the King, belong to his council and are the official superiors of the Muslims of Cambodia. They are regarded by the faithful as representing the four caliphs of the Prophet and enjoy a great spiritual authority.

The religious dignitaries are usually chosen from the most prominent families, whose sons can become imāms at the age of 15 and whose daughters are educated with special care to make them worthy wives.

The Muslims of Cambodia respect the graves of saints, which they call *ta-lak*; they believe in witches, the werewolf, evil spirits, and in magic, and have retained certain agricultural customs which are also found among the neighbouring peoples, such as the Cambodians and Annamese; these are relics of an old animism.

The family bonds among the Muslims of Cambodia are very strong; the father has great authority. The wife is well treated but kept strictly within the house as are the daughters, who are very early initiated into household duties and, being under strict control, are only allowed to marry Muslims.

The Muslim Chams have adopted from the Cambodians the custom of filing and lacquering their daughters' teeth at the age of 15, an operation which is accompanied by prayers from the imāms and sprinkling with holy water.

The marriage customs are in general Muslim. The boys do not as a rule marry before 18 or the girls before 15. The wedding feast is accompanied with great expenditure. Divorce is possible but rare. If it is demanded by the woman, she loses the small dowry (Cham *sakavin*, Malay *mas kavin*) which the husband settled on her at the betrothal.

The burial ceremony is very simple. The corpse is washed twice with a decoction of jujube leaves or benzoin water, then in clear water, wrapped in a piece of linen and placed in a grave about ten and a half feet deep, with the head to the north. A mound of earth is then erected over the grave, which is covered with thorny branches to protect it from wild animals. Later, there is placed at the head or at the feet a tombstone in the shape of a low flat column, often carved and ornamented with patterns, called *kut* (? skr. *kūṭa*). On the third, seventh, tenth, thirtieth, fortieth, and hundredth day the imāms are invited to pray and eat with the family at the grave. The exhumation practised by the Chams of Annam is not found here.

The husband wears white mourning for 40 days for his wife, the latter for three months and ten days for the husband, and she cannot marry again before a hundred days.

The Islam of the Chams in Annam has quite a different stamp. It appears to have a Shi'i character, as Açan (Ḥasan), Açai (Ḥusayn) and 'Alī are particularly revered and invoked there: they also play the main part in the few manuscripts or legends still preserved in Annam. It is however considerably penetrated by animistic and Hindu ideas and customs which preceded it and still survive alongside of it. The Muslim Chams of Annam are to be counted Muslims mainly through their naive conviction that they are Muslims. They call their Hindu countrymen *kāfir* without the slightest derogatory intention and themselves *banis* = *banī*, "the sons of religion", or Cham Asalam (= Islām), "Chams of Islām". They say that they worship Oblaḥ (Allāh), but also Pō Devata Thwor (Çvör) (Sanskrit *Devatā Svarga*), "God, Lord of Heaven", and they offer presents in certain agrarian rites, *e.g.*, two eggs, a cup of rice brandy, and three leaves of betel, to Pō Olwaḥ Tāk Alā, the "mysterious king of the underworld"; in reality it is the Muslim expression *Allāh ta'ālā*, out of which they have made a god. They also worship the Brahman goddess Pō Inö Nögar = "Mother of the Land" (Umā, Bhagavatī), and her husband Pō Yang Amö, "the Lord God, the Father [of the land]" (Śiva), whom they identify with Pō Havaḥ (= *Ḥawwā'*), *i.e.*, Eve and Pō Adam, the ancestors of mankind.

The Kaphir Cham of Annam with as broad a tolerance have taken into their Pantheon Pō Ovlaḥ (= Allāh), an undefined bodiless god, the creator of Po Raçullak (= *Rasūl Allāh*) and of Pō Latila (= *lā Ilāha*), who lives in Mökah (Mecca) and who was created by Pō Ovlaḥuk (= *Allāhu*) the father of ñöbi Mahamat (= *Nabī Muḥammad*); we thus see that the Kaphir have made three gods out of the misunderstood formula: *Lā ilāha illa 'llāhu, Muḥammad rasūlu 'llāh*!

The Bani of Annam have a very high but vague notion of Nöbi Maḥamat, *i.e.*, the prophet Muḥammad, and to them the Ḳur'ān is *tapuk* (= *kitāb*) *nöbi Maḥamat* = the book of the Prophet Muḥammad; the call it also *tapuk asalām* (= *kitāb al-Islām*), the book of Islam, *kitāb alamadu* = *kitāb al-Ḥamd*, the book of praise, *tapuk çākāray*, the talisman book. They never use its real name. The Ḳur'ān moreover is hardly to be found among them at all. The few copies which exist are incorrect, and written on chinese paper with the brush and not with the reed pen. The Bani seem to esteem equally highly a mystical compendium which much resembles the Javanese *primbon* and is called *nurshavan* by them. The "priests" copy it only during *ramövan* (= *Ramaḍān*) and they receive the princely remuneration of a buffalo for each copy.

The Cham of Annam pray only on Fridays and during Ramaḍān the five *vaḥ* or *vaktū* (= *waḳt*) ("prayer"), the names of which they corrupt as fol-

[1]) I translate this word by "officiant" for lack of a more suitable term. In Indo-China, the *lĕbai* of the Malays and the *lĕbei* of the Chams is a pious man like the Javanese *santri*, who conducts the Friday service in the villages. According to van Ronkel (*Tijdschr. v. Ind. Taal-, Land- en Volkenk.*, 1914, 131), *lĕbai* or *labai* is of Tamil origin and originally meant "Muslim merchant", which strengthens the supposition that Islam came originally from India, not from Arabia, to Indonesia and also to Indo-China.

lows: *çâbahik, çobahik* (= *ṣubḥ*) "morning prayer", *vaḥ çarik* (= *ẓuhr*), "noonday prayer", *asarik* (= *ʿaṣr*) "afternoon prayer", *mögarip* = *maghrib*, "sunset prayer", *ihsā* (= *ʿishāʾ*) "evening prayer". They are in the main content with reciting a few *sūras*, especially the *fātiḥa*, without understanding them, and the Arabic form is so corrupted in their pronunciation that it is almost unintelligible, *e.g.*,

1. *abiḥ similla hyör raḥ mönyör raḥ himīk* = Ar.: *bi ʾsmi ʾllāhi ʾrraḥmāni ʾrraḥīmi*;

2. *ǎulahu akkabar*; *lā ilāha illǎuwāhuk wūwūwāhuk akkabar* = Ar.: *allāhu akbar*; *lā ilāha illa ʾllāh*.

They hardly observe any ablutions but are content with making signs as if they were taking water out of a hole in the ground. Circumcision (*katan, katat* = Ar. *khitān*), which is performed on boys at the age of 15 and must always precede marriage, is however only symbolic and consists in the imām, holding a wooden knife, making the gesture of circumcising. The boy receives a new name (*awal* = *awwal*), usually ʿAlī or Muḥammad. The Bani do not make the pilgrimage to Mecca and, while they do not eat pork, the priests as well as the faithful enjoy spirits made from rice, as well as other intoxicating liquors; the religious dignitaries do not however drink in the mosque. If the number of "40" is not present on Friday in the mosque, those missing are replaced by sacrificial cakes and the usual service, followed by a meal, takes place.

The people observe Ramaḍān only for 3 days. The imāms however must observe it till the end, on behalf of the whole community. During this time they shut themselves up in the mosque with their prayer books, their rosary, their tea pot, their sleeping mats, their copper spittoon and their betel set, which they require to prepare the chewing material indispensable to all Eastern Asiatics. For a whole month they never cross the threshold except to perform the necessary major ablutions in the river. The others are performed using the great cisterns under the penthouse roof of the mosque.

These mosques or *sang mögik* (*samögik, samgrik*; cf. Ach.: *mösögit*), which are turned towards Mecca, are usually rather poor straw huts with walls of bamboo lattice-work.

Even the names of the religious dignitaries in Annam suggest the odd changes which Islam has suffered there. At their head is the *pō gru* or *ong guru* (Skr. *guru*), then come the *imöms* (*imām*), from whom he is chosen and who are the men who really perform the ceremonies, then the *kātips* (*khaṭīb*), who have to give the religious readings in the mosque; next come the *mödins*, *i.e.*, *muʾadhdhin*, the *ăčars* (Skr. *ācārya* = "religious teacher"), a kind of religious instructors attached to the mosque. In general, the word *ăčar* in Annam is applied to all Muslim "clergy" in contrast to *baçaiḥ*, which is the name of the Hindu priests.

All the religious dignitaries in Annam shave their heads and faces. In addition to the simple white fez worn in Cambodia, they also wear a voluminous turban with gold, red or brown fringes. The various ranks are distinguished by the length of the fringes. Like their Hindu brethren they carry a long rattan cane, the roots of which are woven into the form of a basket only for the *ong gru*. A white sarong, a long white tunic which is buttoned and cut open at the neck is their sole costume. On high feast days the *mimbar* and the interior of the mosque are covered with white cloth; on these occasions they exchange the turban for a kind of disc, which is bored through the middle and fastened to the fez by a piece of linen. The whole looks like the biretta of a judge. These "priests" are almost as ignorant as their simple followers; they can hardly read Arabic, hardly study it at all, and only roughly understand some *sūras* which they repeat only "because their fathers also did so". They are free from taxation and forced labour and are held in fairly high esteem by the people; they are the more educated class, however slight the education may be. As they are quite indifferent and tolerant, they do not think ill of the faithful when the latter make offerings to the *Pō Yang* or various Hindu deities, endeavour to propitiate evil spirits and perform certain agrarian rites or magic ceremonies which have nothing Muslim about them. They live in perfect harmony with the Hindu *baçaiḥ*, invite them to their religious and domestic festivities and are invited in turn—only the food for the *imöm* must be prepared by a Muslim woman—and give each other places of honour. From mutual tolerance the two communities refrain from eating both pork and beef.

Only from the Hindu cremations do the Muslim priests carefully absent themselves, and this religious horror of corpses was previously, it is said, the reason why they alone could enter the royal palace to pray with women in child-bed and to watch his wives and children during the absence of the king.

Either as a result of ancient customs or of the Malay-Polynesian matriarchal system or through contact with the Hindus of Annam who have priestesses called *padjău*, the Muslims of Annam have priestesses for a domestic cult; they are called *radja* or *ridja*. If a sick member of the family has to be healed, for example, or a journey or business enterprise to be undertaken auspiciously, the *imöm* first of all recites various prayers, then this *radja*—often the housewife herself—accompanied by the *mödin*, who sings and beats the drum, performs certain ritual dances or falls into a state of great excitement in order to influence the 'deities' or 'spirits of the dead', to whom sacrifices are at the same time made. This ceremony is always followed by a great feast. The *radjas*, who must not eat the flesh of the pig or of the sand lizard, even play the principal part at the great annual festivals, which are celebrated in December-January and are probably of Malay or Indonesian origin—the name Java is repeatedly mentioned in them—and are regarded by the Muslim Cham as the "New Year festival of the ancestors".

The festival lasts two days and three nights. A great booth is built in an enclosure, if possible of new material, and the interior is hung with white cotton cloth. The altar is a simple large tray, with dishes on which are betel, food and fruits. Wax lights are stuck on the edge of the dishes and they also are bound round with cotton threads of different colours. A swing hung from two pillars is for the *radja*; she is assisted by three *imöms* and the *mödin*, who with his tom-tom conducts an orchestra consisting of a clarionet, a violin, cymbals and an oblong drum (*ganöng*). The festival, which is interrupted by numerous meals, is opened with the *bismillāh*, then follows the invocation of the mountain and forest spirits and of the shades of the "spirits beyond the sea, which may not be mentioned by name"; and finally the invocation of 38 deities or spirits by name; at each of them the three *imöms* recite prayers.

The most characteristic part of the festival takes place on the second day at the rise of the morning star. After the *mödin* has invoked the deities and

the *radja* has performed a special dance in their honour, they take a small boat made out of a single piece of wood, which is said to have come from Java or China to collect tribute. The master of the house in which the festival is held pretends not to understand Javanese and the *mödin* acts as interpreter. Amid joking all round, eggs, cakes and the figure of an ape with jointed limbs are put in the boat, the participants then break up the walls and roof of the booth and fight for the cakes. On the third day the *radja* goes, accompanied by the officiants and the orchestra, to the river and solemnly places the boat with the ape on the water. This ends the festival.

While circumcision is only symbolic with the Bani of Annam, the *tubaḥ* for the old men is practised as in Cambodia and the *karöḥ* (literally, "enclosing") marks the declaration of a girl's fitness for marriage. Not till then dare they put up their hair and marry; until then they are *tabung, i.e.*, unapproachable, and the seducer would be severely punished. This festival takes place under the presidency of the *ong gru* and of two *imöm*s for a considerable number of girls on each occasion and lasts two days. It is opened with prayers to Allāh, Muḥammad, the Hindu deities and the shades of their ancestors as well as with a feast at which the priests eat apart. Two booths are erected, the one for the ceremony itself, and the other as a dressing room for the girls, who sleep there under the supervision of four matrons. The *imöm*s spend the night praying; at 7 a m. the girls appear wearing their finest clothes and ornaments, their hair loosened and covered with a triangular mitre. Before them goes an old woman and a man clothed in white, who carries a year-old child dressed exactly like the girls except for the mitre. They throw themselves down before the *ong gru* and the *imöm*s. The *ong gru* places a grain of salt in the mouth of the child, cuts off a lock of its hair and gives it some water to drink. The same is done with the girls, who then return in procession to their booth. If a girl has been seduced the lock is cut off at her neck as a mark of shame. A second feast, at which the priests eat before the faithful, concludes the ceremony.

Birth customs in Annam among the Bani are similar to those among the Kaphir except that the Bani do not sacrifice to the gods on such occasions. The seduction of girls is also severely punished. They do not marry till they are 17 or 18. In Panrang, evidently the result of the old Malay matriarchal system—which has left other traces also, like the right of inheritance of women and the tracing of descent through them and their practising the cult of ancestors—the custom prevails that the girls seek the young men in marriage, but everywhere else in Indo-China the reverse is the custom. The wedding (Cham *likhaḥ*-Arab. *nikāḥ*), which is the occasion of long and costly festivities, is usually replaced by public cohabitation, which causes no scandal; the pair are free to celebrate it later when they can afford it, and they may already have two or three children to take part in it. It is far more elaborate among the Bani than among the Kaphir. The *imöm*s repeat prayers; the *ong gru*, who represents the "lord Muḥammad", asks the bride, who is considered to be Fāṭima, whether she accepts the presents of the bridegroom, the lord ʿAlī. Rich feasts take place at the weddings. The dowry given to the woman remains her property in case of a divorce. Divorce is fairly easy and leaves nearly two-thirds of the joint property in the hands of the woman. Mixed marriages are rare, and in them the children follow the religion of the mother. It sometimes happens that a Muslim woman marries a Hindu, very rarely the contrary.

The burial service is as simple among the Bani as it is elaborate among the Kaphir. The corpse is wrapped in white cotton sheets and placed in a small hut, where the *ong gru* and the *imöm*s repeat prayers. As soon as night falls the dead man is buried, with four *imöm*s present, almost secretly, without a coffin and with the face turned to the north. The relatives beseech his spirit not to come and afflict them. On the 3rd, 7th, 10th, 30th, 40th and 100th day as well as on the anniversary of his death a *padhi, i.e.*, a service at the tomb with prayers, a meal and presents for the *imöm*s, is observed at his grave. Those of the 7th and the 40th day are the most important. The dead person is almost always exhumed after a certain period on an anniversary of his death. His bones as well as his golden or silver ornaments are placed in a small coffin which is again buried in a particular place and considered sacred.

We thus see that Islam, while it has remained fairly pure in Cambodia, has been overlaid in Annam with a mass of elements and customs, partly animistic and partly Hindu. The Cham nevertheless desire to be good Muslims: it is only their ignorance and long usage that are the causes of their errors. Malay *ḥādjdjī*s who have come from the Archipelago or Cambodia on a religious mission have repeatedly succeeded in putting an end to sacrifices to heathen deities in various villages, although they have been unable to stop the enjoyment of rice brandy.

Under the influence of "modernism" and westernization, all these customs have become very much less rigid, losing all those elements which might seem archaic or incompatible with the demands of present-day life.

The French administration attempted, though not very forcefully, to preserve the Cham from complete assimilation and from the extinction as a separate community to which they seemed doomed at the beginning of the 20th century. It succeeded in saving the essential part of what remained of the monuments they had built, and managed, with less happy results, to restore their confidence in themselves. Their future, which now depends on their own will to survive, is still very uncertain.

(A. Cabaton-[G. Meillon])

INDONESIA

i.—Geography

The Republic of Indonesia comprises some four-fifths of the archipelago which, stretching eastwards from the south-eastern angle of Asia, separates the Indian from the Pacific Ocean, at the same time as it constitutes a discontinuous land link between Asia and Australasia. Extending for approximately 3,400 miles from west to east, and about 1,250 miles from north to south (in a zone bounded by longitudes 92° and 141° east and by latitudes 6° north and 11° south), it embraces some 3,000 islands of highly diverse size, character and resources. In popular topographical terminology these are perceived as constituting four groups. The Sunda Raja or Greater Sunda complex, including the four large islands of Sumatra, Java (Djāwa), Celebes (Sulawesi), and the larger part of Kalimantan, constitutes the core of the country from the point of view of areal extent, size of population, wealth of natural resources, and intensity of economic activity. The Nusa Tenggara or Lesser Sundas form a chain of smaller islands extending from Bali to western Timor (the eastern half of this latter island is under Portuguese control). The third group, known as Maluku, includes the island arcs lying north of the eastern Lesser Sundas and east of Celebes. Irian Barat, or the western half of the island of New Guinea, which was incorporated within the Indonesian polity as recently as 1963, is by all standards the least developed part of the country.

Structurally the Indonesian archipelago comprises three main tectonic components, each with a disstinctive morphological expression. Both the western and eastern sectors—known to physiographers as the Sunda and Sahul Shelves respectively—are developed on stable continental platforms of ancient indurated rocks, relatively subdued relief, and comparatively shallow seas. Between, and partially bounding, these platforms are a series of geologically recent mountain ranges that now appear on the map as fragmented but structurally continuous island arcs separated from each other by deep semi-oceanic basins. As might be expected in view of their geological history, these island arcs are zones of instability, manifested primarily in earthquakes of high frequency but moderate intensity and, more particularly, in a wide range of volcanic activity. On the continental platforms the starkness of this tectonic skeleton is peripherally mitigated by a mantle of alluvium giving rise to extensive coastal plains: elsewhere slopes tend to be steep, and level land exiguous. Finally, deriving from this structural context are substantial mineral resources: notably petroleum, tin ore, coal of various grades, and bauxite, all from the Sunda Shelf and its borders; low-grade iron ores from Borneo and Celebes; and small quantities of high-grade magnetite and hematite elsewhere. Other mineral resources which have been exploited on a small scale include nickel in Celebes, manganese, phosphate, sulphur, and iodine in Java, and gold and silver in Sumatra and West Java.

Indonesia's location determines that its climatic régime is broadly equatorial. Variations in insolation intensity and duration are minimal, so that temperatures at sea level are uniformly high and extremely constant. Annual ranges are small, usually of the order of 5° F, with diurnal ranges up to three times that amount. The season, distribution and quantity of rainfall depend on location and aspect in relation to the seasonally reversed wind systems which the presence of continental land masses here imposes on the equatorial régime. Whereas an annual total of at least 80 inches is experienced throughout most of the archipelago, slopes athwart the warm moist air streams that prevail during the northern-hemisphere summer are much wetter. Padang, at the foot of the Barisan Range, for example, has an average annual rainfall of 177 inches. In the eastern half of Java and the Nusa Tenggara, by contrast, an extreme southerly location within the Indonesian polity combines with proximity to the Australian arid zone to produce average annual totals of less than 60 inches. This is also the only part of the country to experience a markedly drier season. Generally speaking, rain everywhere tends to fall in heavy showers of comparatively short duration.

High temperatures and abundant moisture ensure that soils, apart from those developed on recent alluvium or volcanic ash, tend to be strongly ferrallitic in character, their outstanding agronomic feature being a low natural fertility. In primeval times virtually the whole territory was covered by a mantle of equatorial rain-forest of great floristic richness, which itself subsumed a variety of plant associations ranging from true rain-forest to coastal mangrove, fresh-water swamp-forest, limestone associations, and mountain vegetation. Centuries of human occupance, however, have done much to modify both the extent and the character of these forests. Today less than a fifth of the archipelago is under primary forest or something approaching it, and this is distributed very unevenly throughout the country. Whereas more than four-fifths of Irian Barat and eastern Kalimantan are forested, the comparable proportion for both Java and the Nusa Tenggara is nearer one fifth of their respective areas.

From the point of view of ecological adaptation, as contrasted with that of contemporary administration, the pre-eminent dichotomy in the Indonesian world is that between Java and the rest of the country, the so-called Outer Islands. And nowhere is this distinction more apparent than in the evolution of agricultural practices. Traditionally the first of these regions has been associated predominantly, though by no means exclusively, with the delicate ecological equilibrium of slash-and-burn shifting agriculture (technically known as swidden), and the heartland of Java with the stable equilibrium of permanent-field, wet-padi farming. Only in the nineteenth century was this distinction somewhat blurred by the introduction into both regions of new crops such as sugar, tobacco, coffee, and subsequently rubber, and by the imposition in Java, by a paternalistically inclined colonial government, of an agro-industrial system which intruded the disequilibrating forces of commercial agriculture into the very heart of the village, often making the Javanese farm worker occupationally conduplicate, coolie and peasant at the same time time.

Indonesia is the fifth most populous nation in the world, with a current population exceeding 100 million souls. Of these, approximately two-thirds are living on the islands of Java and Madura, which together comprise only seven per cent of the land area of the country. In terms of average densities, this means something like 1,200 persons per square mile in Java, but only 62 per square mile in the Outer Islands (though this figure conceals wide variations within the region, *e.g.*, Bali with 750 persons per square mile; Sumatra with 80, Kalimantan with 18, and Irian Barat with 6). In large measure this imbalance in population distribution is

attributable to what Clifford Geertz has described as the concentrative and tumescent qualities of the wet-padi ecosystem as integrated with commercial farming in colonial Java. The dispersive, inelastic properties of the swidden ecosystem would seem likely to make large-scale transfers of population from Java to the apparently underpopulated Outer Islands not only unpopular, but also ineffective unless accompanied by a major transformation of the ecosystem.

The population of Indonesia is disposed in a hierarchy of settlements ranging from innumerable villages at the lowest level to the capital, Jakarta, at the highest. Although Jakarta, with a population of three million, is more than twice the size of Surabaya, the next largest city, it appears to accord better with the graduated distribution of city sizes characteristic of economically developed countries than with the concept of the primate city as evidenced in numerous other formerly colonial territories. In fact the notion of primacy would seem to be more appropriate to the situation in the Outer Islands, where some of the higher order urban centres are nearly four times as populous as the next largest cities in their territories. Whereas urbanism reaches a higher level in Java than elsewhere in Indonesia, urbanization appears to be proceeding more rapidly in the Outer Islands. The several levels of the city hierarchy subsume a considerable variety of urban forms, ranging from traditional ceremonial and religious foci to the commercial-administrative conurbations which rose to pre-eminence during the colonial period, from largely unchanged pre-industrial market towns dominated by the expediential mores of the bazaar to modern industrially oriented port cities.

Bibliography: There is an excellent introduction to the landscapes and climate of Indonesia in Part II of Charles A. Fisher's *South-East Asia. A social, economic and political geography*[2], London and New York 1966. Works which are now rather severely dated, though more in their conceptualization than in their substantive information, are Charles Robequain's general study *Le monde malais*, Paris 1946, and C. Braak, *Klimakunde von Hinterindien und Insulinde* (Band IV, Teil R. of W. Köppen and R. Geiger, eds., *Handbuch der Klimatologie*, Berlin 1931). The structure of Indonesian agriculture is summarized in Karl J. Pelzer, "The agricultural foundation" in Ruth T. McVey (ed.), *Indonesia*, New Haven, second printing [revised] 1967, 118-154, and discussed in greater detail in C. J. J. van Hall and C. van de Koppel (eds.), *De landbouw in de Indische archipel*, The Hague 1946-50. Clifford Geertz has provided a perceptive interpretation of the factors conditioning agricultural development in *Agricultural involution. The process of ecological change in Indonesia*, Berkeley and Los Angeles 1963. The characteristics of Indonesian cities at the close of the colonial era are described in W. F. Wertheim *et al.*, *The Indonesian town. Studies in urban sociology*, The Hague and Bandung 1958, and recent changes are documented in Pauline D. Milone, *Urban areas in Indonesia: administrative and census concepts*, University of California Institute of International Studies, Research Series No. 10, Berkeley, California 1966. A useful contemporary atlas is *Atlas Nasional Seluruh Dunia untuk Sekolah Landjutan*, Djakarta, Bandung, Ganaco 1960, while the *Atlas van tropisch Nederland*, Batavia 1938, remains a magnificent cartographic record of conditions immediately prior to World War II.

(P. Wheatley)

ii.—Ethnography

The cultural diversity of the several hundred ethnic groups of Indonesia is striking; a common pattern underlying the diversity is discernible, but elusive and hard to specify. For this reason, no consensus has been reached on a classification or taxonomy of Indonesian peoples and cultures. A workable, if somewhat imprecise, classification is as follows: (A) societies with political organization predominantly on a *territorial* basis; (B) societies, politically organized on a territorial basis, but with chiefs of *genealogical* groups also having political and legal powers; (C) societies in which political power is exclusively vested in chiefs of genealogical groups (or of local segments of such groups).

Societies of group A constitute real states, which have played an active rôle in the history of South-East Asia. Examples are the principalities of Java and Bali, the Malay states of eastern Sumatra and of the Malay Peninsula, and the sultanates of the Bugis-Makassar area of southern Celebes. Without exception they have adopted a world religion: mostly Islam, but a syncretic form of Hinduism and Buddhism in the case of Bali. Political authority is (or *was*—in Indonesia these States have lost the semi-independence they have preserved in Malaya) in the hands of established dynasties, assisted by courtiers, administrators, and territorial chiefs who form a nobility, and (in the case of Java) drew their emoluments from the taxes they levied in the district granted to them by the ruler as an apanage of their office. The rulers, and their regalia, are usually considered to be the sacral centres, the spiritual depositories, of the wellbeing of their realms. Kinship organization in these societies is generally of the bilateral (cognatic) type, based on single-family households. Economic activities are centred on agriculture (rice grown on elaborately irrigated fields), stockbreeding, and trade (some of it inter-insular).

Societies of type B (such as the Batak and the Minangkabau, both of Sumatra) have or had some measure of centralized political government, but the chiefs of genealogical groups (clans and lineages) have considerable authority over their kinsfolk. The lineages in question may be matrilineal (Minangkabau) or patrilineal; they have a tendency to maintain regular marriage relationships with specific other lineages, in which the bride-bestowing lineage is superior to the bride-receivers. This type of social structure links up with a whole system of cosmic classifications, involving dichotomies as male/female, upperworld/underworld, and superior/inferior, and speculations on numerology and colour classification. Such a system appears most clearly among those Batak groups which are not yet converted to Islam or Christianity.

Rice cultivation (on irrigated fields as well as by the slash-and-burn method) is important, as is the growing of commercial crops (coffee, rubber). Peoples of this group are no less prominent in modern Indonesian affairs than those of group A.

Societies of type C, finally, occur on the smaller, and in the interior of the larger islands: the Dayak peoples of Borneo, the Toradja of Celebes, etc. Many still adhere to their original religion, or were only recently converted to Islam or Christianity. The archaic religion is predominantly an ancestor cult,

with elaborate, frequently potlatch-like, mortuary rites and (*e.g.*, with the Dayak) a developed priestly theology and rich mythology, manifesting the same type of classification system as mentioned for B. Kinship forms vary around the theme of matrilineal combined with patrilineal descent or inheritance. Agriculture ("dry" rice, maize, sago) predominates, foreign trade is rudimentary. For these people in particular a general Indonesian problem is acute: how much of their traditional way of life can and should they preserve in a nation striving towards a modern and unified culture?

(P. E. DE JOSSELIN DE JONG)

iii.—LANGUAGES

With a few exceptions which will be mentioned, the indigenous languages of Indonesia belong to the Austronesian family. Austronesian languages extend over Madagascar, southern Vietnam, Taiwan, the Philippine Islands, Malaysia, Indonesia, Papua/New Guinea, the Melanesian, Micronesian and Polynesian islands and New Zealand. Although the existence of such a family was postulated as early as 1780 by William Marsden, it was left to W. von Humboldt, in 1836, to define it more closely and to give it the title "Malayo-Polynesian" by which it was to be known for more than a century; this has now been displaced by "Austronesian", a term coined by Wilhelm Schmidt in 1899. The Austronesian family, comprising perhaps some 500 languages in all, is currently subdivided into three subgroups, Indonesian, Polynesian and Melanesian; Micronesian is held by some to constitute a fourth subgroup. The majority of the people who have embraced Islam in this area speak Indonesian languages; therefore it is these languages that are important to the study of Islam in South East Asia, particularly Malay, Javanese, Sundanese, Achenese, Minangkabau, Buginese and Macassarese.

Owing to the lack of real evidence, the early history of the speakers of Austronesian languages is little more than conjecture. Their probable original homeland, which would of course be the homeland of the ancestors of the Indonesians, has been located by speculation in places ranging from Tartary, the Indo-China area and southern China to Melanesia or Taiwan.

Not all the languages of Indonesia belong to the Indonesian subgroup; communities speaking non-Indonesian languages can be found in North Halmahera, Ternate, Tidore and Irian Barat (formerly known as West New Guinea). Besides these should be mentioned the non-indigenous languages spoken in the country, such as Chinese (mainly Hokkien, Kheh, Cantonese), Dutch, English and Arabic.

On the other hand languages of the Indonesian subgroup are spoken by communities beyond the borders of Indonesia: Malay in Malaysia, southern Thailand and Brunei, and other languages of the Indonesian subgroup in Sarawak, Sabah, Taiwan, Madagascar, the Philippines and Portuguese Timor. In addition, Malay or other Indonesian languages are spoken by communities of Indonesian origin living in Ceylon, South Africa, Surinam and the Netherlands.

There is no general agreement on the total number of languages within Indonesia. Apart from the absence of an agreed definition of language, detailed linguistic studies are lacking for most areas. A figure commonly mentioned is 250, but possibly more reliable estimates are those which put it at 200, or a little less. The number of speakers of any single language can vary from perhaps over 50 millions, as in the case of Javanese, to the 40,000 or so who speak some of the lesser tongues. Some idea of the distribution of the main languages can be obtained from the accompanying language map; for some suggested amendments to the data given in it, see I. Dyen, *A lexicostatistical classification of the Austronesian Languages* (Indiana University 1965, 48-50); naturally a map of this scale cannot show the minority speech communities which have grown up outside their original areas as a result of population movement.

A broad division of the Indonesian languages into Western and Eastern, suggested by the Dutch scholar J. L. A. Brandes, failed to withstand the test of time.

Epigraphic material. The decisive early external influence on Indonesian culture was unquestionably Indian, and the earliest known inscriptions are written in Sanskrit. One of these, found near Kutei in the island of Kalimantan (formerly called Borneo), is thought to date from about 400 A.D.; it commemorates the rule of Mūlavarman over a Hinduized state. The earliest inscriptions from the Malay Peninsula, Buddhistic texts, and also the earliest epigraphic evidence from Western Java, are judged likewise to date from this time.

The oldest evidence of a language indigenous to the area is found in inscriptions on stone from South Sumatra, dating from 682 A.D., and associated with the state of Srivijaya; despite the occurrence here too of many Sanskrit words, the basic language has sufficient affinity with later Malay to be given the name Old Malay. Although Old Javanese inscriptions begin only about a century later (circa 786), subsequent material in this language proved to be much more abundant than that in Old Malay; copper inscriptions appeared up until about the 12th/18th century. Epigraphic evidence of the other recorded ancient Indonesian language, Old Balinese, begins in 882 A.D., and continues to appear over nearly two centuries. It may be noted that all three languages employed scripts of Indian derivation. There is of course no reference to Islam in the early inscriptions.

Malay and Bahasa Indonesia. Malay, originating probably in Sumatra, has been disseminated widely through the Indonesian area, in which it has for centuries been the lingua franca. On account of its usefulness for commercial, political and religious purposes it has always attracted more attention from foreigners than have other Indonesian languages. It is the language of a considerable corpus of manuscript material produced in the 11th-13th/17th-19th centuries. Malay, the official language of Malaysia, and *Bahasa Indonesia* (see below), the official language of Indonesia, have both been developed directly from this earlier form of Malay. Linguistically speaking, Malay and *Bahasa Indonesia* can scarcely be held to be separate languages; the two different names reflect the political division of the Indonesian cultural area which ensued on the Anglo-Dutch Treaty of 1239/1824. The following remarks on some of the characteristics of Malay apply equally to *Bahasa Indonesia*.

We may mention first some features of the Indonesian languages in general which are at the same time applicable to Malay. Observers have noted conspicuous mutual resemblances between the languages of the Indonesian subgroup. The number of vowel phonemes is limited, being basically [a], [i],

[u] and [ə], with sometimes a considerable range of non-phonemic variation ([i] to [e], [u] to [o] etc.); variation in the length of vowels, when it occurs, is also non-phonemic. Common diphthongs are [ai], [au] and [ui]. The consonantal system is relatively simple; the glottal stop (*hamza*) is widespread; single consonants are preferred, and consonantal clusters avoided, both at the beginning and end of words; but certain two-consonant combinations, notably nasal combinations such as *-mb-*, *-nd-* etc., may occur within the word. Thus a common pattern for the Indonesian "word-base", which is likely to be disyllabic, will be consonant/vowel/consonant/vowel/consonant.

Affixation, another trait of the Indonesian languages, can best be illustrated with specific reference to Malay examples; but it must be mentioned that *infixation* is no longer productive in Malay, if indeed it ever was a feature of this language. Very briefly, the verbal prefixes in Malay include *ber-*, *me*^{x}*-*, *pe*(*r*)- and *ter-* and the suffixes are *-i* and *-kan*; a verb may occur without any affix; in certain cases two prefixes may be used simultaneously, as may prefix and suffix. Prefixes commonly employed in conjunction with or to form substantives are *ke-*, *pe*^{x}*-* and *per-*, while a common suffix (which again may be used in conjunction with a prefix) is *-an*.

Further, it may be remarked that substantives have no grammatical gender, and they do not normally undergo morphological change for case or number; thus *mata* unless further qualified can be translated 'eye' or 'eyes'. Reduplication of the substantive, a very common feature of Indonesian languages, can correspond to the plural number, but does not always do so. Perhaps the one syntactical feature of Malay which ought to be mentioned is the fact that the attributive adjective follows the noun it qualifies.

External influences on Indonesian languages. Of the languages which were introduced into the area in historical times, it was undoubtedly Sanskrit which first exerted a major influence. The occurrence of Sanskrit and partially Sanskrit inscriptions has been mentioned. Javanese and Malay proved to be particularly susceptible to Sanskrit influence, and in many cases it was via these two languages that Sanskrit influence reached other languages of the area. Sanskrit has given to these languages common grammatical particles, and moreover has enriched the lexicon in the spheres of religion (for example *āgama, dosha*), of ideas (*e.g.*, *buddhi, jīva*), court ritual (*e.g.*, *upacāra, āsthāna*), of statecraft (*e.g.*, *dūta, drohaka*), of relationship (*e.g.*, *svāmin, putra*), and so forth, with appropriate adaptation to the phonology of the recipient language.

Arabic is the other language which has exerted a significant influence on the Indonesian languages over a long period if time; perhaps none was more deeply influenced than Malay, and Arabic influence has permeated through to the other languages often via Malay. This influence can be seen in Malay syntax, at least in religious writings, and in the 'popular' lexicon as well as the 'learned', though understandably to a greater extent in the latter. Examples of everyday Malay words of Arabic derivation are: *asal* (< *aṣl*), *fasal* (< *faṣl*), *hal* (< *ḥāl*), *ilmu* (< *ʿilm*), *mungkin* (< *mumkin*), *perlu* (< *farḍ*), *sebab* (< *sabab*), *selamat* (< *salāma*), *taubat* (< *tauba*). Before the coming of steam, contact between Arabia and the Indonesian Archipelago was maintained mainly via India; traces of Indian languages, and Persian, consequently appear in borrowings from Arabic. This possibly explains also, perhaps, the unexpected occurrence of words of Sanskrit origin in the vocabulary of Islamic practice in Malay; so, for 'heaven' *shurga* (< Skt. *svarga*) is preferred to the Arabic *samāʾ*; for 'hell' *naraka* (< Skt. *naraka*) rather than *jahannam* or *al-nār*; for 'fasting' *puasa* (< Skt. *upavāsa*) rather than *ṣawm*. Alternatively —and this seems more likely—the use of these words may be due to the taking over by the first Muslims of terms already current in the area of proselytization.

The relative position of Sanskrit and Arabic as sources of influence on Malay and other Indonesian languages can be summed up thus: Up to and including the 7th/13th century Sanskrit held the field; during that time Sanskrit appeared in inscriptions in combination with Indonesian languages, and indeed inscriptions wholly in Sanskrit occasionally appeared. However, by the beginning of the 8th/14th century Islam had secured a foothold in the Archipelago, and before the century was out Arabic influence had begun to manifest itself on the language; in that century appears the first clearly Islamic Malay inscription, known as the Trengganu Stone, written moreover in an Arabic type of script. From then on, Sanskrit was steadily to yield ground to Arabic in the field of language; some of the Sanskrit vocabulary in the inscriptions has failed to survive into modern times, while there has been no comparable loss of Arabic elements once they have been incorporated in the language. The position of Arabic has of course been strengthened by the force of religion exerted through religious instruction and the Ḳurʾān, and numbers of manuscripts in Arabic have been brought into, or produced in, Indonesia. Excepting possibly in the island of Bali, no comparable Sanskrit subculture persists; nevertheless, since 1942 Indonesian linguists have often resorted to Sanskrit when creating new terms for *Bahasa Indonesia*.

The remaining non-Indonesian languages which have influenced Malay and *Bahasa Indonesia* are relatively unimportant and can be dealt with briefly. Considering the centuries of Chinese contacts with the Archipelago, Chinese dialects have had a remarkably slight influence, excepting possibly at the colloquial level; from India has come vocabulary of Hindi, Persian, Urdu, Tamil derivation; three European languages which have exercised significant influence are Portuguese, Dutch and English, the last, being the most widely taught foreign language in Indonesia, can be expected to exert a continuing influence on *Bahasa Indonesia*. Through the centuries there has of course been a continuing interaction of the Indonesian languages on one another.

Scripts. Broadly speaking, the pattern of influences which emerged in the previous section will be reflected in any discussion of the scripts used in Indonesia. The earliest Sanskrit inscriptions were written in a Pallava script, and developments of this were used subsequently in the inscriptions and other writings in Indonesian languages: Old Javanese (from which modern Javanese script has been derived, and akin to the Old Malay inscriptions from Sumatra), Balinese, Madurese, Sundanese; also in the Sumatran languages Batak, Redjang and Lampong, and others. Although superficially very different, the Bugis and Makassar scripts show definite affinities with those mentioned. In fact, there is so far no evidence to refute an opinion put forward by H. Kern and others that all the early scripts of the Archipelago are of Indian origin.

For some languages (exemplified by Malay), though not for others, the diffusion of Islam resulted in the adoption of a new Arabic type script. For Malay the adoption was virtually total, and apart from epigraphic material referred to above no writings are known in pre-Arabic script. As far as the other languages are concerned the new script met with varying degrees of acceptance; in Javanese it was used for certain kinds of literature, in Bugis and Makassarese it was rarely employed, while in Achenese and Minangkabau for example it came into general use. The principal modification to the script necessitated by Malay phonology was the addition of the following letters to represent sounds not found in Arabic: چ for *ch*; ڠ for *ng*; ڤ for *p*; ݢ for *g*; and ڽ for *ny*. In the Malay alphabet (which in this respect is more consistent than some other alphabets of Perso-Arabic origin) the و precedes the ه. The vowel signs *fatḥa, kasra* and *ḍamma* are seldom used; their Malay names (*baris diatas*, 'line above', *baris dibawah* 'line below' and *baris dihadapan* 'line in front', respectively) are reminiscent of the equivalent terms in Persian. The letters of this script are known in *Bahasa Indonesia* as *huruf Arab*, but in Malay as *Jawi*. Use of this script is declining in Malaysia, and in Indonesia it has almost disappeared, surviving only in the religious sphere. It has been superseded by romanized script, introduced from Europe as early as the 11th/17th century by Christian missionaries. Thus other languages than *Bahasa Indonesia*, Javanese for example, make use of a romanized script for publications at the present time. The romanized spelling of *Bahasa Indonesia* and of Malay, being based respectively on Dutch and English orthography, tend to emphasize the dissimilarity of the two; however, on 27 June 1967 agreement was reached on a new unified spelling to be used both in Indonesia and Malaysia. The letters which functioned identically in the two former orthographies have been retained in the new spelling: *b, d, f, g, h, k, l, m, n, p, r, s, t, w, z*; so have the combination *ng*, and the letters *q, v*, and *x* which occur in some borrowed words. Where usage in the two former orthographies differed, changes had to be made:

	Former Malay Spelling	*Former Bahasa Indonesia spelling*	*New agreed symbol*
	ch	tj	c
	j	dj	j
	y	j	y
	ny	nj	ny
For words of Arabic origin	kh	ch	kh
	gh	g	gh
	sh	sj	sy

The agreed new symbols for the vowels are *a, e, e, i, o,* and *u* [thus, except in material for reading practice, there will be no differentiation between the symbol for *e taling* ("long e", sometimes hitherto given an accent sign), and *e pĕpĕt* ("short e", sometimes written hitherto ĕ)]. The present spellings for diphthongs (*ai, au, oi*), are retained. It is not yet certain that the new spelling will be generally adopted in Indonesia.

Bahasa Indonesia. It has been seen that both Old Javanese and Old Malay appeared on the early inscriptions. In the intervening centuries both languages have developed and they have played prominent roles in the cultural history of the Archipelago, Javanese as the language of the sophisticated polities of Central and Eastern Java, Malay as the language of the port-states and of mercantile intercourse in general. In view of the numerous literary works produced in Javanese, and of the cultural prestige of the Javanese in the area, it would not have been surprising to find Javanese become the language of Indonesia; however, owing in part perhaps to the complexities arising from the "stratification" of the Javanese language, in part to the geographical dissemination of Malay through the islands, Malay was to become the language of the independent nation. The modern Indonesian form of Malay is known officially as *Bahasa Indonesia* (literally "the language of Indonesia"); foreign writers generally use this term to refer to the language in preference to the less precise "Indonesian". The adoption of *Bahasa Indonesia* to be the official language of the country was virtually assured even before Dutch rule ended in 1949. In spite of advocacy by some that Dutch should become the primary language, and misgivings on the part of others as to the capability of *Bahasa Indonesia* to function as the language of a modernizing state, the determination of Indonesian nationalists to utilize the language as the vehicle of expression of their will in the end decided the issue. In 1928 the nationalist youth movement formally resolved in this sense; and the suppression of the Dutch language as a consequence of the Japanese occupation of the East Indies in 1942 removed another obstacle from the path of *Bahasa Indonesia*, which was declared to be the official language of the new Republic of Indonesia in the constitution adopted in 1945. The present situation therefore is that *Bahasa Indonesia* is in general use for radio, newspapers and books; it is spoken and understood by nearly all Indonesians, the exceptions being mostly middle-aged or elderly; since it is now taught in schools throughout Indonesia it may be assumed that within a generation or so it will be the everyday tongue of all Indonesians—and thus incidentally the everyday tongue of more Muslims than any other language. The majority of Indonesians will continue to study and speak a regional language as well (Javanese, Sundanese etc.), which will in fact be their mother tongue. The use of Dutch, still surprisingly popular with older educated Indonesians, is bound to decline rapidly; to a great extent it is being displaced by English.

Bibliography: For a survey of the Indonesian languages in their wider context see A. Capell, *Oceanic linguistics today*, in *Current Anthropology*, iii/4 (October 1962), 371-96, and comments by others; also C. F. and F. M. Voegelin, *Languages of the world*: *Indo-Pacific*, in *Anthropological Linguistics*, vi/4 (1964) and vii/2 (1965). For "Proto-Austronesian" see O. Dempwolff, *Vergleichende Lautlehre des Austronesischen Wortschatzes*, 3 vol., Berlin 1934-8, and for "Proto-Indonesian" R. Brandstetter, *Wurzel und Wort in den Indonesischen Sprachen*, Lucerne 1910, and other monographs by Brandstetter [four of which are translated by C. O. Blagden in *An introduction to Indonesian Linguistics*, London 1916]. On the "Austronesian homeland" theories there is a useful survey with bibliography by J. C. Anceaux in *BTLV*, *deel* 121 (1965), 417-32. J. Gonda's *Sanskrit in Indonesia* Nagpur 1952) gives much more information about Indonesian languages than is implied by the title, and numerous articles on Indonesian linguistics by this scholar are to be found in *BTLV*, *Lingua* and elsewhere.

On Arabic influence on Malay see Ph. S. van Ronkel, *Over Invloed der Arabische Syntaxis op de Maleische*, in *TBG*, *deel* 41 (1899), 498-528, and C. Skinner, *The influence of Arabic upon Modern Malay* in *Intisari* (Singapore), ii/1 (1966 (?)), 34-47. For specimens of scripts see K. F. Holle, *Tabel van Oud- en Nieuw-Indische Alphabetten*, The Hague 1882, also Arakin (below). Of the many grammers of *Bahasa Indonesia* which have been produced, so far none has achieved recognition as a standard work.

A general discussion of the Indonesian languages is to be found in V. D. Arakin, *Indonezyskie Yazuiki*, Moscow 1965, with an extensive bibliography of works in various languages. A very useful series of critical bibliographies on Indonesian languages is being published in Leiden by the *Koninklijk Instituut voor Taal-, Land- en Volkenkunde*; those that have appeared so far are: P. Voorhoeve, *Critical survey of studies on the languages of Sumatra*, 1955; A. A. Cense and E. M. Uhlenbeck, *Critical survey of studies on the languages of Borneo*, 1958; A. Teeuw (assisted by H. W. Emanuels), *A critical survey of studies on Malay and Bahasa Indonesia*, 1961; E. M. Uhlenbeck, *A critical survey of studies on the languages of Java and Madura*, 1964. For a comprehensive collection of linguistic maps, see Richard Salzner, *Sprachenatlas des Indopazifischen Raumes*, 2 vols., Wiesbaden 1960. (RUSSELL JONES)

iv.—HISTORY: (a) ISLAMIC PERIOD.

The earliest known record of probable Muslim settlement in the Malay-Indonesian Archipelago is a Chinese report of the existence of an Arab settlement in east Sumatra (San-Fu-Chi = Sriwidjaya = Palembang) headed by an Arab chief in 55/674. A more definite statement on large-scale Muslim emigration into the Archipelago was given by al-Masʿūdī, who reported that in 265/878 about 120,000 or 200,000 merchants and traders, consisting mainly of Muslims (Arabs and Persians) who had settled in Khanfu (Canton) were massacred following a troublesome peasants' rebellion in south China under the T'ang emperor Hi-Tsung (265/878-276/889). Consequently large numbers of Muslim merchants and traders fled from Canton and sought refuge in Kalah (Kedah) on the west coast of the Malay Peninsula. This considerable emigration of Muslim merchants and traders effected a transference of the *entrepot* for Muslim trade with the Chinese empire from Canton to Kedah. We may reasonably assume that since the Muslims had had quite a considerable settlement in Canton (which dated from as early as the 1st/7th century), enjoying a high degree of religious and civil autonomy, they must have perpetuated their mode of settlement and social organization in Kedah, and also in Palembang, whither they had similarly emigrated. This event seems to have marked the beginning of the coming of Islam in the Archipelago.

There is evidence of Muslim settlement in the Phanrang region in south Champa in Cambodia in 431/1039 or earlier. The Leran inscription near Gresik in east Java dated 475/1082 indicated an earlier Muslim presence in the region.

According to the Achehnese (Malay) chronicles, Islam was introduced into the northern tip of Sumatra sometime around 506/1112 by an Arab missionary whose name is given as Shaykh ʿAbd Allāh ʿĀrif. One of his disciples, Shaykh Burhān al-Dīn, later carried on his missionary work as far as Priaman down the west coast. The date of the establishment of Islam in north Sumatra is given as 601/1204, when Djohān Shāh became its first Sultan. The *Ḥikāyat Radja-Radja Pasai* related that the Sharīf of Mecca sent a certain Shaykh Ismāʿīl at the head of a mission to spread Islam in north Sumatra in the middle of the 7th/13th century. The Pasai region of north Sumatra, consisting of the realms of Perlak and Samudra, was already Muslim by 682/1282. The Sultan, al-Malik al-Ṣāliḥ, died in 697/1297 or 707/1307.

In Trengganu on the northeast coast of the Malay Peninsula, a stone inscription dated 702/1302 was discovered at Kuala Berang indicating earlier Muslim settlement in the region. A Muslim tombstone at Bud Dato on the island of Jolo in Sulu dated 710/1310 indicates that Muslims frequented the region, perhaps in the course of their trade relationship with China.

Towards the end of the 8th/14th century, the kingdom of Malacca on the west coast of the Malay Peninsula was founded by Parameswara, a Palembang princeling who had fled from Java and ruled for a brief period in Tumasik (Singapore). It is possible that the coastal regions near Malacca had already been used by Muslims for their commercial activities at an earlier date, seeing that they had settled in Kedah long before. By 812/1409, the ruler of Malacca, through Muslim proselytizing efforts, had embraced Islam and concluded a family alliance with the Sultan of Pasai by marrying the latter's daughter. Both Pasai and Malacca had by then become centres of Islamic learning and of the propagation of the faith throughout the Archipelago. Ṣūfism was to play a dominating role in the Islamization process for the next two centuries. Scholars and missionaries from all parts of the Archipelago as well as from Arabia gathered in these two emporia to disseminate religious knowledge. Among these were found many from Java including two future saints of Java, Sunan Bonang of Tuban and Sunan Giri, who on their return to Java propagated the faith there.

Pasai during the reign of al-Malik al-Ẓāhir (beginning of 8th/14th century), a grandson of al-Malik al-Ṣāliḥ, was the earliest centre of Islamic learning in the Archipelago. When Ibn Baṭṭūṭa visited Pasai in 746/1345-747/1346, he recorded that the Sultan was fond of religious debates, and zealous in propagating Islam in the surrounding country by means of conquests. By 819/1416 the peoples of Aru, Samudra, Pedir and Lambri, which were all included in the realm of Atjèh, had become Muslim, and Atjèh was expanding her power to the south.

According to a *tarsila* (*silsila*: genealogical record of noble families) of Sulu, Islam was introduced there in the second half of the 8th/14th century by an Arab missionary called Sharīf Awliyā Karīm al-Makhdūm, who had come from the region later known as Malacca, where he was credited with having converted the inhabitants to Islam. He is said to have reached Sulu in 782/1380 and settled in Bwansa near Jolo. The next missionary, also an Arab, named Sayyid Abū Bakr, had similarly come from the same region and also perhaps from Sumatra. He married a daughter of the Muslim king of Bwansa, a Minangkabau prince called Radja Baginda, and succeeded the latter as the first Sultan of Sulu at the end of the 8th/14th century.

On Java, Arab and Persian missionaries had been propagating Islam since 803/1400. One of them, a famous *walī*, the *sayyid* Mawlānā Malik Ibrāhīm, died in Gresik in 822/1419. He had made attempts to persuade the king of Madjapahit (Vikramarvaddhana, 788-1386/833-1429) to embrace Islam.

However, it was during the reign of Kertawidjaya (Bhre Tumapel, 851/1447-855/1451) that Islam gained a firm foothold in the royal court of Madjapahit. This event was initiated by the coming of Raden Raḥmat, the son of an Arab missionary of Champa, whose important and decisive role in the Islamization of Java had been foretold by another Arab missionary of Java, Shaykh Mawlānā Djumādā al-Kubrā. Raden Raḥmat established his centre at Ampel (Surabaya) and later was to become venerated by the Javanese as the chief *walī* of Java with the title Sunan Ampel. Another famous *sayyid* missionary of Java was Mawlānā Isḥāķ of Pasai who was entrusted by the Sultan of Pasai with the mission of converting Balambangan in the easternmost region of Java. Both Sunan Bonang, a son of Sunan Ampel, and his own son by his marriage with a daughter of the king of Madjapahit, Raden Paku (Sunan Giri), studied under him in Malacca and Pasai. Upon the death of Sunan Ampel (872/1467), Sunan Giri succeeded him and made Ampel flourish still further as the centre of Islamic learning and the propagation of the faith in Java. Another son of Sunan Ampel also became recognized as a *walī* and was known as Sunan Dradjat of Sidayu. On the island of Madura, Pangeran Sharīf, also called Khalīfa Ḥusayn, held sway. The fall of Madjapahit in 883/1478 has been traditionally linked with Raden Patah, a son of the king and foster son of Arya Damar, a Madjapahit governor of Palembang who was converted to Islam by Raden Raḥmat some time before 844/1440. Raden Patah settled in Bintara (Demak), where he built a mosque, completed in 894/1488 (and still standing). It was in Demak, which also became a centre of Islam in Java, that another celebrated *walī*, Sunan Kalidjaga, ingeniously made use of the *wayang* (theatre) for spreading Islam.

Islamization in the southern region of Sumatra began in the beginning of the 9th/15th century. By the beginning of the 10th/16th century, the region was already Muslim. Certain areas in the Minangkabau region had by then also been Islamized. Palembang is generally held to have been Islamized initially through the influence of Raden Raḥmat and Arya Damar some time around 844/1440. The Lampung region in the south was converted through the influence of Bantem, where Islam had taken root at the end of the 9th/15th century. It is reported that the king of Lampung, Minak Kemala Bumi, had gone over to Bantem, where he was converted. Upon his return to Lampung from a pilgrimage to Mecca, he spread the faith in his homeland.

Bandjarmasin in south Borneo was Islamized by missionaries from Java (Demak) in the 9th/15th century. Brunei in the north was Islamized during an earlier period, coinciding with that of Sulu (see above).

In the Moluccas also Islam was introduced in the 9th/15th century. These islands then came mainly under the rule of the princes of Ternate, Tidor, Gilolo, and Batjan, and they include Halmahera, Celebes, Ambon, Banda, the west coast of New Guinea and the islands between, Ceram, Batjan, and the Obi Islands. Ternate, the principal island in the group, received Islam earliest; its first Sultan embraced Islam in Gresik in 901/1495. He spread the faith in his realm assisted by one Pati Putah of Hitu in Ambon, who also studied in Java. Not more than 50 years before 928/1521, the ruler of Tidor had become Muslim, as had the rulers of Gilolo and Batjan.

In 917/1511, Patih Yūnus, son of Raden Patah, conquered Japara and was proclaimed first Sultan of Demak. At this time Shaykh Nūr al-Dīn Ibrāhim, another *walī* of Java bearing the title Sunan Gunung Djati, made extensive conversions in Sundanese (west) Java. From Tjirebon he sent one of his sons, Mawlānā Ḥasan al-Dīn, to convert Bantem in west Java. By 933/1526, Bantem and Jakarta had accepted Islam and Sunan Gunung Djati became the first Sultan of Bantem (933/1526-960/1552). The Sunan was the ancestor of the dynasty of the future princes of Tjirebon and Sultans of Bantem. During the reign of Raden Ttenggana, a brother of Patih Yūnus who succeeded the latter as Sultan of Demak (west Java), was won over to Islam. The Hindu-Javanese state in east Java, Singasari (Tumapel), which continued to maintain itself, was aided in its futile struggle by Kediri and Mataram, which had not yet been won over to Islam. In Balambangan, the independent states of Panarukan and Pasuruan were in the power of the Shivaite prince of Bali, who from his stronghold of Matjan Putih directed the defence against Islam. Raden Trenggana completed the conquest of Singasari and Mataram, and it was while the expedition against Pasuruan was in progress that he died (ca. 953/1546). After some confusion due to quarrels between sons and relatives following Tranggana's death, Adiwidjaya, the regent of Padjang in east Java, assumed control and under him the realm of Padjang, consisting of ten districts, rapidly rose in power. The districts were governed by governors reponsible to the Sultan. This was toward the end of the 10th/16th century, when civil war followed as a result of the governor of Mataram's rebellion against the Sultan. Sutawidjaya, the governor of Mataram, known as the *Senopati* (Commander of the Princely Guard), emerged victorious and founded the Sultanate of Mataram (990/1582-1010/1601). When he died (1010/1601), the kingdom had spread throughout central Java to the west as far as Galuh in Tjirebon, and almost the entire east over Balambangan, numbering 25 districts.

Malacca, the first Muslim Malay kingdom in the Malay Peninsula, had always been an important centre for the dissemination of Islam to Java and the farthest east. In 880/1475, Sharīf Muḥammad Kabungsuan, a son of a *sayyid* who had married a Malaccan princess, went from there to Mindanao in the Philippines, where he introduced Islam. Malay and Arab missionaries from Sumatra and Malacca, who used to sail to the Moluccas, also took part in the Islamization of Macassar in Celebes (911/1505). One of the famous missionaries was Khaṭīb Tunggal, a native of Minankabau, whose tomb at Tallo, north of Gowa, is still to be seen. The Macassars spread Islam among the Bugis people, who though slow to accept conversion, when once converted strove hard to convert others in the course of their trading activities between New Guinea and Singapore. The island state of Flores in the south was gradually converted to Islam by their efforts. From Celebes, Islam was carried by Macassar missionaries to the island of Sumbawa, and perhaps also to Lombok, between 947/1540 and 957/1550.

On the Malay Peninsula, Kedah had become Muslim by 879/1474 through missionary efforts. Nothing much is known of how the rest of the Peninsula was Islamized, but there are indications pointing to missionary activities centred at Malacca and Pasai.

Sukadana in southwest Borneo was Islamized by Arabs and Malays chiefly from Palembang. By 1000/1591, all the coastal regions of Borneo had become Muslim.

The Luzon islands and districts such as Manila, Cebu, Oton and others were Islamized by

missionaries from Brunei and Atjèh, as were also those of Mindanao and Sulu. Around 1009/1600, m ssionaries from Java took an active part in Islamizing the regions in the far east of the Archipelago.

By the beginning of the 10th/16th century, under the first maker of Greater Atjèh, Sultan ʿAlī Mug͟hāyat S͟hāh (d. 937/1530), Atjèh had conquered several territories in the south and eastern coastal regions. His son, Sultan ʿAlā al-Dīn Riʿāyat S͟hāh al-Ḳahhār (d. 976/1568), who hired mercenaries from Turkey, Abyssinia, Gudjerat and the Malabar, conquered central Sumatra (Batak region) in 944/1537. Not all the Batak people were converted to Islam, but the Muslims were to score their greatest missionary success there much later, after the arrival of Christian Protestant missionaries in 1315/1897; this was no doubt also due to the effect of the zealous teachings of the Wahhābī-inspired *ḥādjdjīs* who promoted a revivalist movement in 1218/1803 [see PADRI]. In the years 983/1575 and 990/1582, there arrived in Atjèh certain *ʿulamāʾ* from Mecca, Yemen and Gudjerat to discuss metaphysics and *taṣawwuf*. These discussions, which seem to have begun at the beginning of the 9th/15th century, continued with ever-increasing depth and produced prolific writings in Malay, which continued to maintain intellectual interest for over two centuries. Their significance was to indicate the inner intensification of the Islamization process in the Archipelago, chiefly affecting Sumatra and Java. Some of the most profound and best examples of such writings are those of the Malay Ṣūfī poet and writer on doctrine, Ḥamza Fanṣūrī [*q.v.*], who belonged to the Ḳādiriyya Order and flourished during the reign of Sultan ʿAlā al-Dīn Riʿāyat S͟hāh (Sayyid al-Mukammal, 998-1013/1589-1604). During Sultan Iskandar Muda's reign (1016-46/1607-36), Atjèh reached its zenith in military as well as in commercial power. Iskandar Muda, the 'Crown of the World' (Mahkota ʿĀlam), conquered Perak and sacked Johore and, with the exception of Java and the eastern parts of the Archipelago, held sway over the rest. In his reign there flourished another famous Malay Ṣūfī, S͟hams al-Dīn al-Sumaṭrānī (d. 1040/1630 [*q.v.*]) who was *S͟hayk͟h al-Islām* of Atjèh. Discussions and polemics on *wudjūdiyya* mysticism, which had begun in the 9th/15th century, continued to dominate the spiritual climate of Atjèh—the spiritual thermometer of the Archipelago—till after the arrival of Nūr al-Dīn al-Rānīrī (d. 1077/1666 [*q.v.*]) in 1047/1637. The effect that al-Rānīrī's vigorous polemics and prolific writings had on *wudjūdiyya* mysticism in the Archipelago could almost be compared with that of al-G͟hazālī on Muslim philosophy. Al-Rānīrī remained in Atjèh till 1054/1644 and became chief *ḳāḍī* of the realm under Sultan Iskandar II (1047-51/1637-41). The next important event following this period was the Malay translation of the Ḳurʾān, together with al-Bayḍāwī's commentary, made by ʿAbd al-Raʾūf al-Sinkilī (born ca. 1030/1620 and d. after 1104/1693 [*q.v.*]), a member of the S͟haṭṭāriyya Order, who flourished during the reign of Sulṭāna Tādj al-ʿĀlam al-Ṣafiyyat al-Dīn S͟hāh (1051/1641-1086-1675), the first of four queens who ruled Atjèh from 1051/1641 to 1111/1699. The line of Sultans of Atjèh continued till 1321/1903 [see ATJÈH].

In Celebes, the kingdom of Bolaang-Mongondou in the northern peninsula east of Minahassa was Islamized gradually by Arabs, Bugis and other indigenous Muslim missionaries. Between 1098/1686 and 1121/1709, the kingdom was ruled by its first Christian king, Jacobus Manopo. By 1260/1844, its last Christian king, Jacobus Manual Manopo, had embraced Islam. The famous missionaries in this region were Ḥakīm Bagus and Imām Tuweko.

Some of the Papuans of New Guinea and the islands northwest of it that came under the rule of Sultan Zayn al-ʿĀbidīn of Batjan in the beginning of the 10th/16th century were Islamized during that period. In the west coast of New Guinea, Islam had already been propagated as early as 1015/1606. Progress was slow, although missionary efforts were revived in the late 19th century by Arab and indigenous missionaries. In general, however, only the coastal settlers have been converted; the inhabitants of the interior have remained pagan to this day. The spread of Islam and the process of Islamization in the Malay-Indonesian Archipelago is still going on in varying degrees in the various regions.

The very brief chronological sketch of the spread of Islam outlined above merely forms a small part of the history of Islam in the Archipelago and its historical and cultural role in the life of the Malay-Indonesian peoples. Much of the history of Islam and its role in the Archipelago has yet to be written. Owing to the lack of data on the precise dates of the introduction of Islam into the Archipelago, some of the dates given above could very well be put back. Several theories on the introduction and expansion of Islam in the Archipelago, and the ways and means by which it was spread, have been put forward. There have also been some attempts made at presenting a cultural evaluation of Islam in the history of the Malay-Indonesian peoples. The various main theories each emphasized singly the dominant role (a) of trade in conveying Islam to the Archipelago; (b) of traders, officials connected with trade, among whom was the s͟hāhbandar [*q.v.*], and intermarriages in spreading Islam and effecting conversion among the people; (c) of competition between Muslims and Christians as accelerating the spread of Islam particularly between the 9th/15th and 11th/17th centuries—this was conceived as a continuation of the Holy War between Islam and Christianity; (d) of political convenience as being the motive for conversion to Islam; (e) of Islam's ideological worth as being the main factor of conversion; and (f) of the influence of Ṣūfism and its *ṭarīḳas*.

For a critique of these theories, and a new general theory of Islam in the Archipelago see S. M. N. al-Attas, *The mysticism of Ḥamzah Fanṣūrī*, 2 vols., Oxford and Kuala Lumpur, forthcoming; idem, *Islamic culture in Malaysia*, Kuala Lumpur 1967, 123-30; idem, *The origin of the Malay shaʿir*, Kuala Lumpur 1968; idem, *A general theory of the Islamization of the Malay-Indonesian Archipelago*, Kuala Lumpur, forthcoming.

Bibliography: For the spread of Islam in the Malay-Indonesian Archipelago, the best narrative account based on translations from the Malay, Javanese, and other original sources, contemporary non-Muslim sources, and the research mainly of Dutch scholars, is in T. W. Arnold, *The preaching of Islam*, London 1935, ch. 12. There are many Muslim and other sources giving general or particular accounts of Islam in the Archipelago, among them the *Ḥikāyat Raja-Raja Pasai* (History of the kings of Pasai), edited by A. H. Hill, in *JMBRAS*, xxxiii (1960); the *Ḥikāyat Atjeh* (History of Acheh), ed. T. Iskandar, The Hague 1959; the *Bustān al-salāṭīn* of al-Rānīrī, mss Or. 1971 and Or. 5303 in the University Library, Leiden; the

(b) COLONIAL PERIOD.

When the first Dutch merchantmen arrived in Java in 1596, they heard news of a major kingdom in the interior of the island. There, the Islamic state of Mataram was emerging after a century of confusion following the fall late in the fifteenth century of Madjapahit, the last major Hindu-Buddhist kingdom on Java [*q.v.*]. The Mataram hegemony was expanding over the Islamic port-principalities of the northcoast, as well as over other interior states. The greatest of the Mataram monarchs, Sultan Agung (1613-1645), completed the subjugation of Java with the conquest of Surabaja in 1625.

The Dutch East India Company established its headquarters at a former Sundanese port in 1619, renaming it Batavia. Sultan Agung was unwilling to tolerate this Dutch post, and launched massive siege operations against it in 1628 and 1629. He failed to take the Dutch post, however, and the Javanese kings never again attacked the Dutch there.

In subsequent decades, as the Dutch trading system expanded outwards from Batavia throughout the Asian seas, and maritime states like Atjèh [*q.v.*] and Macassar [*q.v.*] declined in strength, the Mataram kingdom too suffered various internal crises. Some were apparently a result of tensions between the more strongly Islamic and the more traditional elements of Javanese society, the *santri* and *abangan*. These tensions however became entangled with regional antagonisms and dynastic squabbles, and in 1675 the kingdom fell into chaos. The rebel Trunadjaja rallied the various dissident forces, and in 1677 took the court. At this point, however, the Dutch East India Company intervened for the first time on behalf of the "legitimate" ruler and restored the Mataram line to its throne.

Thereafter, for eighty years the kingdom was afflicted with rebellion and chaos, in which situation the Dutch were employed by the legitimate pretenders to defend their inheritance. The Company was repaid with ever-increasing control of the trading centres on the north coast of Java, until by the end of the seventeenth century it had a virtual monopoly of the trade and commerce of Java, and had attained a position of semi-suzerainty which enabled it to collect large amounts of export crops like coffee, sugar and pepper as what was in effect tribute in kind. During the eighteenth century therefore the Company came increasingly to concentrate on the economic exploitation of Java, and its trading stations in the other islands of Indonesia, and in South and East Asia, stagnated. Throughout these years the Dutch became more and more important in Javanese court life as the arbiters of disputes, and at the same time more and more the focus of xenophobic sentiments throughout various levels of Javanese society.

In 1755 the Dutch, unable to suppress a widespread

revolt after nine years, persuaded the weak and deserted ruler to divide his kingdom with the main rebel in order to appease him. Thus the kingdom became two, one ruled by the Susuhunan at Surakarta, the other by the Sultan at Jogjakarta. During the latter half of the eighteenth century, the Javanese rulers sought to legitimize and stabilize this new situation, in which the Dutch Company became more and more a peripheral concern, as its financial and military strength continued to decline.

Meanwhile, anti-Dutch sentiments continued to simmer, augmented by Islamic sensitivities and by rebellious groups opposing the two Javanese monarchs. These aspects combined to form an incipient movement to expel the foreigner and to reunite the kingdom. An attempt to achieve these goals in Surakarta in 1790 was foiled by the combined efforts of the Dutch and Jogjakarta. The next major attempts occurred in the period 1810-1830.

The economic foundations of the Dutch East India Company became increasingly precarious during the second half of the eighteenth century. Administrative costs rose steeply following the division of Mataram, and commercial profits declined. The Company's debts in 1750 stood at 10 million guilders; forty years later they were 100 million. The isolation of Indonesia from the Netherlands during the Revolutionary Wars in Europe exacerbated the position; and after the French invasion of the Netherlands in 1795 the Company's affairs were delegated to a committee, subsequently to a Council of Asiatic Possessions. On 1 January 1800 the Company was dissolved and its rights and properties reverted to the Netherlands state.

Revolutionary principles for reform in Indonesia were debated by a Government Commission appointed in 1802 to draw up a new colonial Charter, but apart from recommending a reform of abuses, the prevailing system based on the collection of export crops as 'forced deliveries' and 'contingents' continued. Under Governor-General Herman Willem Daendels (1808-11) the administration was reshaped towards direct rule and the Indonesian 'Regents' or Chiefs of the north-east coast of Java were placed more directly under the control of Dutch officials. Communications in Java, especially the extension of the great post road, were improved in anticipation of a British invasion. The blockade of Batavia and other ports of the island by British ships seriously disrupted the colonial economy.

Java and its dependencies fell to British arms in 1811, and there ensued a five years interim administration largely under Lieutenant-Governor Thomas Stamford Raffles (1811-16). A radical reform of the colonial system was attempted with the object of abolishing forced labour and cultivation, and substituting in its place a system based on freedom of cultivation and a money economy. Central to these reforms was the land rent system which entailed the annual payment by the Javanese cultivator of a fixed proportion of his rice crop, either in kind or cash. The system was introduced into north-eastern Java but not into the Priangan regions of west Java where the forced coffee culture continued. Raffles carried Daendel's reforms further towards the creation of a Western controlled bureaucracy by abolishing the prerogatives of the Regents; he also placed the affairs of the central Javanese principalities on a firmer footing.

The restitution of the Indonesian possessions to the Netherlands in 1816 led to initial attempts being made to continue the liberal system of the former regime, modified to meet its obvious shortcomings. The individual method of land rent assessment gave way to the village system. This produced better returns but not sufficient to meet the growing costs of administration. In attempt to bolster the flagging economy a new trading company (*Nederlandsche Handel Maatschappij*) was founded in 1824 to keep colonial trade in Dutch hands, but it failed to fulfill expectations.

Dutch financial difficulties at this time were aggravated by heavy military expenditure occasioned by the Java War (1825-30) and the so-called Padris War (1821-39), in the Menangkabau region of central Sumatra [*q.v.*]. Both of these wars were in part conflicts within Indonesian society itself which arose from the tension already noted between the *santri* or orthodox Islamic factions and the *abangan* or traditionalist elements. The growing strength of the *santri* groups posed a challenge to the influence over the predominantly *abangan* peasantry of the traditional ruling castes, who were in turn supported by their Dutch allies. The two conflicts therefore possessed also the nature of anti-colonial conflicts against the *kafir*, and the eventual victory of the Dutch cemented the identity of interest between them and the majority of the Indonesian traditional élite (known as *prijaji* in Java) for the remainder of the colonial period.

The heavy burden of colonial debt incurred by the Java and Padris Wars and by the secessionist movement in Belgium led to the appointment of Johannes van den Bosch as Governor-General with instructions to make the colonial possessions pay. Van den Bosch (1830-34) commenced the introduction of the so-called Culture System (*cultuur stelsel*) under which large areas of arable land in Java were utilised for the cultivation of coffee, sugar, indigo and other crops for the world market. As part of the reform many of the powers of the Regents (*prijaji*) were returned. During the first ten years of the Culture System exports from Java rose by 200 per cent, shipped by the now prosperous Netherlands Trading Company. The profits accruing from the sale of these exports were paid to the Netherlands treasury and used to reduce taxation and finance public works in Holland. During nearly fifty years (1830-77) that contributions from the Culture System were paid, approximately 832 million guilders were remitted from Indonesia. Pressure to abolish the system came from the liberals in the Dutch parliament, which came increasingly to control colonial affairs, and from those like E. Douwes Dekker (Multatuli) whose famous novel, *Max Havelaar* (1860), focussed attention on the abuses of the system.

From 1863 onwards successive governments sought to relieve the Javanese of the worst abuses of the system, and gradually to dismantle it, handing over to private merchants and investors the exploitation of former government monopoly crops such as pepper, indigo and tea. The more profitable monopolies such as the sale of opium and the cultivation of sugar and coffee, however, remained for many years. The last, coffee, was not given up until 1917.

Another aspect of developments in the second half of the nineteenth century was increased colonial activity in the islands outside Java, and the bringing eventually of all of them within the Dutch administrative system. This activity had already been apparent for some years before 1863, and was at first exclusively governmental. It was aimed primarily at forestalling other colonial powers and freelance adventurers who might try to establish themselves in

the areas in which the Dutch claimed paramountcy, and took the form of the imposition of treaties by which local Indonesian rulers acknowledged their states to be part of Netherlands India. Sometimes, as in Bali in 1846 and 1849, this involved a military expedition and a Dutch Resident. In other cases, as in the tin-island of Billiton in 1851, full-scale occupation and direct administration was necessary. In most cases however only a paper claim to Dutch supremacy was involved.

After the beginning of the so-called 'Liberal' period, however, this governmental activity in the outer islands was reinforced and intensified by private Dutch and foreign enterprise and capital seeking to exploit the agricultural and mineral resources of economically favoured areas. From many examples one may mention the large-scale development of estate cultivation, beginning with tobacco, in the East Coast residency of Sumatra. This is partly because the Siak tobacco concessions of 1863 were amongst the largest and earliest of these private enterprises, partly because they provoked an important political and military confrontation between the Dutch and the Achehnese, who claimed to exercise suzerainty over the leased tobacco lands.

The Atjèh War [*q.v.*] (1873-1904) was long, arduous and financially ruinous for the Dutch. More important, since the Achehnese who so tenaciously resisted the imposition of Dutch control and the extinction of their independence were by long tradition a fiercely Islamic society, maintaining close links with the centres of their faith in the Middle East, the war raised the whole issue of the colonial government's Islamic policy. It also brought to the fore two men of influence and note—Snouck Hurgronje, a scholar and the government's adviser on Islam from 1890, and Van Heutsz, a soldier and administrator. Snouck Hurgronje advocated as a general principle ruthless suppression of all Muslim leaders who opposed Dutch political control combined with complete freedom for the day to day practice of the religion and customs of Islam under Dutch administration. The execution of the first part of this policy was entrusted to Van Heutsz, who not only brought the war in Atjèh to an end but as Governor General (1904-1909) brought virtually the whole of the remainder of the outer islands under effective Dutch administration.

The beginning of the twentieth century thus saw the whole of what is now Indonesia linked by Dutch administrative control, consolidated by the operations of the inter-island shipping company the KPM (*Koninklijke Paketvaart Maatschappij*), founded with government support in 1888. It witnessed also the emergence of a new school of thought, embodied in the so-called 'Ethical' policy, which took as its objectives not only administrative efficiency and economic development but also the enhancement of the welfare of Indonesians, and the repayment of the 'debt of honour' which had been incurred by the acceptance of the financial profits which Holland had drawn from Indonesia since the inception of the '*cultuur stelsel*' in 1830. It was against this background that modern Indonesian nationalism developed.

Prior to the twentieth century, the principal proponents of an Indonesian adjustment to Western ways were the 'progressive regents' of Java, a handful of enlightened nobles who urged the traditional elite to acquire Western education in order to deal more effectively with the Dutch. The beginning of the century saw new and more radical social groups emerge advocating a total reorientation of Indonesian society along modern lines.

The first organization to express these new elements was *Budi Utomo* (Noble Endeavour), which was founded in Batavia in 1908 by Javanese students, most of them scions of the lesser *prijaji* and all possessing Dutch-style education. Its aim was the transformation of Javanese culture for the purpose of social modernization, a gradual process in which an enlightened colonial administration would work together with progressive members of the indigenous elite. *Budi Utomo* was followed by a succession of 'younger generation' movements in the Outer Islands (*Jong-Sumatra, Jong-Minahasa,* and so on); all of these were modern in outlook but still thought in terms of the traditional regional cultures.

Very soon *Budi Utomo* was supplanted by movements that were more radical in their demands and more popular in their appeal. By far the most important of these was *Sarekat Islam* [*q.v.*] (Islamic Union), which was founded in 1912. It began as a union of Javanese batik merchants, most of them strongly *santri*, who banded together in reaction against increasing business competition from the Chinese minority and against Christian missionary activity. Very quickly, *Sarekat Islam* developed into the organizational expression of massive popular unrest, part traditional messianic movement and part modern political party.

The decade between 1912 and 1922 marked the high point of political Islam in Indonesia. *Sarekat Islam* was by far the largest and most influential Indonesian organization; it reflected a developing popular consciousness of an identity that transcended regional cultural boundaries, and this broader unity was seen in terms of Indonesian adherence to Islam.

In Malaya, the process of pan-regional awakening was to lead to a lasting identification of Islam with Malay-ness; but in Indonesia the connection proved ephemeral. *Sarekat Islam* was not organizationally and politically capable of bringing the desired concrete reforms and amelioration of people's living conditions, so that its following was fluid, dissolving in one area only to expand where it had not yet been tried and found wanting; this was a process which could not continue many years without general disillusionment. Moreover, in the early 1920s mounting government pressure caused the *Sarekat Islam* leaders to abandon outspoken opposition to Dutch rule. This was followed by their expulsion of the Indonesian Communist Party (PKI), which had hitherto flourished as a bloc within the larger movement. The Communists took with them the bulk of the now much reduced membership of *Sarekat Islam*, and thus control over Indonesia's largest mass following passed into secularist hands.

To some extent the PKI-Sarekat Islam schism seems to have rested on the *santri-abangan* cultural contrast. But there were important Islamic Communist movements in Central Java and West Sumatra in the 1920s and the principal areas of Communist rebellion in 1926-27 (Banten and West Sumatra) were strongly Muslim. Moreover, a high proportion of Communist cadres arrested in the wake of the uprising consisted of *haji*s or persons otherwise identified with Islam. In fact the main basis of choice between PKI and *Sarekat Islam* seems to have been the demand for action against foreign rule. The most disaffected *Sarekat Islam* members—including a considerable portion of petty entrepreneurs, merchants, and wealthier farmers—turned to the Communists in desperation, and their eventual revolt exhibited many traditional millenarian features. Of those *Sarekat Islam* followers who did not seek action at

all costs, the great part turned apathetically from politics; the remainder—more economically and socially secure and more willing to organise for limited and largely non-political objectives—constituted the subsequent clientele of the *Sarekat Islam* and its successors.

The Netherlands Indies government had not been insensitive to the emergence of a modern-educated elite and the transformation of Indonesian society by advanced forms of economic exploitation. It was, however, unable for some time to decide whether to concentrate on shoring up traditional social structures and muffling the impact of economic modernization on the Indonesian populace, in the interest of maintaining the *status quo*, or whether to stress opportunities for Indonesian participation in the modern sphere, in particular providing a place for the emerging modern elite as the future source of native leadership and as an instrument for the peaceful modernization of the society. The latter approach was favoured by the advocates of the so-called Ethical Policy, the principal political accomplishments of which were the establishment of parties and the foundation in 1916 of the Volksraad, an advisory assembly involving some Indonesian representatives and a restricted Indonesian electorate. However, it very soon appeared to both the Indonesians and the Dutch that their ideas concerning the scope and pace of native participation were very different, and it seemed increasingly questionable if their ultimate interests were compatible at all. Ethical assumptions were dealt a severe blow by *Sarekat Islam* involvement in popular disturbances in 1919, and the coup de grace was provided by the abortive Communist rebellion of 1926-27. Thereafter, Netherlands policy stressed measures that favoured the restoration of traditional authority; strongly repressive action was taken against efforts by Indonesian politicians to acquire a mass following.

Politics thus once again became restricted to the small circle of the modern-educated elite, located for the most part in the great cities of Java. This group still represented a tiny and privileged minority. It was, however, radical and its members were sufficiently separated from the world of their fathers to reject regional cultures as their primary focus of identity. Tradition was to them a dead weight which must be sloughed off if the Indonesian people were to unite in effective struggle against colonial rule. Their goal was the realization of a modern Indonesian nation-state, unqualified by such internationalist ideological aims as had been represented by the *Sarekat Islam* and the PKI.

Some of these nationalists involved themselves in religiously-orientated organizations, but most joined or founded movements of explicitly secular bent. One reason for this was the increasing Westernization—and therefore secularization—of the modern Indonesian elite, to whom Islam seemed part of the outmoded traditional world. Moreover, they were mostly of *prijaji* origin. This placed them on the *abangan* side of the *santri-abangan* cultural contrast and aligned them with longstanding *prijaji* fears of Islam as an alternative focus for popular loyalty and hence as a potential source of social unrest.

Indonesian politics was henceforth marked by a deep split between religious and secular movements. On the Islamic side when *Sarekat Islam* abandoned its radical opposition to colonial rule it identified itself more closely with the Javanese merchant and entrepreneurial elements from which it had originally sprung. These were strongly modernist in their orientation and had already found non-political expression in the ***Muhammadijah***, a social and educational welfare organization founded in Jogjakarta in 1912. ***Muhammadijah*** modernists dominated *Sarekat Islam* of the 1920s and involved it in Pan-Islamic endeavours; in reaction to this, more traditionalist Javanese Muslims formed a new Islamic organization, *Nahdatul Ulama*, in 1926. This was orientated more towards the opinion of the countryside, where it drew its leadership from religious notables and the more prosperous peasantry. Neither of these two religious orientations or their social bases were attractive to nationalists derived from the traditional bureaucratic elite; and in turn the Muslim groups viewed the prospect of the secularists gaining power with justified apprehension.

Within the secular nationalist camp there was an even greater schismatic tendency, but during the colonial period it reflected quarrels over personalities and strategy rather than any fundamental ideological division. The most serious disagreement was between those who considered it appropriate to take advantage of what representational possibilities the Indies government granted and those who considered this to be collaboration with the enemy. The most prominent of the non-cooperative groups was the Indonesian Nationalist Party (PNI), founded in 1927 and led by the future Indonesian president, Sukarno. It dissolved in 1930 following its leader's imprisonment, to be succeeded by two organizations reflecting another difference of nationalist opinion—the Indonesian Party (Partindo), which called for an emphasis on unity and the acquisition of as much of a mass following as was then possible, and the 'new' PNI, led by Hatta and Sjahrir, which urged the development of an ideological and organizationally disciplined cadre.

Conscious of sectarian feebleness and the general futility of non-cooperation, the nationalists of the mid-1930s sought fusion, first in the Greater Islands Party (Parindra) in 1935 and then in the more radical Indonesian People's Movement (Gerindo) of 1937. The urge toward unity also affected the Islamic organizations, bringing modernists and traditionalists together in the All-Indonesian Islamic Council (M.I.A.I.) of 1937. Finally, both religious and secular groupings combined in the Indonesian Political Coalition (G.A.P.I.) in 1939.

Neither this strenuous effort at unity nor the abandonment of non-cooperation by the radicals achieved any significant modification of colonial rule. The repressive post-Ethical policy seemed to the Dutch to have worked well: even the united Indonesian political organizations were weak, and their most troublesome leaders were in jail or exile. It consequently seemed better not to tempt fate by opening the Pandora's box of politics again. The last years of Dutch rule therefore gave little hope to even the most moderate of Indonesian nationalists for the reform of the colonial regime. There was very little to make them feel a stake in the Dutch presence and a good deal, once the Japanese seized the colony in 1942, to make them fear a Dutch return.

(c) Post 1942 [see DUSTUR p. 662; ḤIZB p. 534].

v.—Islam in Indonesia

Islam came to Indonesia as the second of three more or less successive waves of profound influence from outside. Of the three, it is the only one to have spread quite generally and to have achieved an

immediately visible and dominating imprint on the Indonesian's thought and action. Even so, this imprint is not uniform throughout the vast area of the Indonesian archipelago. There are notable regional differences. On the other hand, Indonesia clearly constitutes one of the outer fringes of the world of Islam. There is relatively much adaptation of Islam to local customs and traditions; conversely there is relatively little positive contribution to Islam, whether as doctrine or as practice, even so far as Indonesia proper is concerned, let alone the more centrally located parts of the Islamic world.

Neither the chronology nor the nature of the spread of Islam in the Indonesian archipelago is satisfactorily established, especially for the earlier period.

The nature of the spread is often described as a combination of two kinds of process. At times it operates like an oil stain, with people (on an individual or on a familial basis) gradually deciding to embrace Islam. At other times it goes by leaps and bounds, with entire communities opting for Islam, often as the only available means to hold their own, for example in the face of Western expansionism or other critical events. Under the latter kind of circumstances, prompting or pressure by Muslims may occasionally play a role. On rare occasions the use of force has been recorded, but this appears as untypical. Whatever the nature of its spread, Islam reached Indonesia as a fully-grown way of life: there was no necessity for an Indonesian contribution to its tenets and practices.

During historic times, the cultural, religious, economic and political history of the area has been marked to a large extent by three successive waves of influence from outside. One originates from the Indian subcontinent and is expressed in terms of the naturalist religions and philosophies of that area, especially Hinduism and Buddhism. The second is Islamic; at first it originated from the Indian subcontinent as well, but later on its source of inspiration shifted to the Middle East. The third is European, especially Dutch; it has a Christian component, but this has not been preponderant at all times. A fourth outside influence, not comparable to a wave because of its more or less persistent nature and also its restricted impact, is the ages-old Chinese presence in Indonesia. Of the three waves, the first was more or less spent when the second arrived. But the third was already advancing when the second was still in full flow; and the two have kept moving simultaneously ever since, up to the present.

When each of these waves first arrived, the territory of the present-day state of Indonesia was not distinct as such. To discuss these forces as impinging on "Indonesia" is therefore an anachronism. Yet as a descriptive device it is not too objectionable, for four reasons: (1) Irian (New Guinea) does not really count for present purposes, (2) the Philippines, where Islam arrived through Indonesia, have always had a separate status, (3) Malaya cannot be overlooked entirely but needs no more than casual references here, (4) parts of islands in the archipelago not belonging to the Indonesian Republic, like Northern Kalimantan (Borneo) or half of Timor, play no significant part in Indonesian Islam.

A common characteristic of all three waves is that their first approach was prompted by trade activity; the third differs from the other two in that it has gradually taken shape as political-economic conquest by foreigners, followed by colonization. The three are alike once more in that none has resulted in a full disruption of Indonesian continuity, but they differ again in that the bearers of both the Hindu-Buddhist and the Islamic waves have gradually identified with, and become virtually undistinguishable from, their new Indonesian setting, whereas the carriers of Western impact have assiduously and to an increasing extent maintained a separate identity. Moreover, of the first and the second, the second is now predominant and the first greatly reduced both in visibility and in importance.

As regards the chronology of the spread of Islam, it is generally assumed that Islam gained a foothold on Indonesian soil, in the ports of the Northern tip of Sumatra, towards the end of the 7th/13th century. Although the history of Muslim trade with China is rich in vicissitudes, it has existed, more or less successfully, ever since the 8th century AD. There is no reason to assume that it did not occasionally involve parts of the Indonesian archipelago. In this connection one thinks in particular of the spice trade, involving especially the Moluccas area. But it is only in 1292 that the Venetian traveller Marco Polo, visiting the North Sumatran ports of Perlak, Samudra and Lambri, refers to the former two as more or less Muslim port towns in fully pagan surroundings. A stone dated 696/1297, made in Cambay (Gujerat), marks the tomb of a ruler Malik al-Ṣāliḥ of Samudra-Pase, who must have been a Muslim. The strong links between this area and India are also emphasized by another traveller, the Moroccan Muslim Ibn Baṭṭūṭa, 746/1345-6. The slow spread that would have been likely, given such a foothold, gained a dramatic impetus by the islamization of the coastal state of Malacca, originally the creation (around 1400 AD) of an expatriate Javanese. A highly successful maritime empire, Malacca became a centre for the diffusion of Islam in all directions. Another Cambay tomb stone covers the remains of one Malik Ibrāhīm, who died in Gresik, East Java, in 822/1419. Malaya and the various parts of Northeast Sumatra were islamized in the coastal areas; and in the early 10th/16th century some small Muslim principalities existed on the North coast of Java. What introduced the decisive element of competition was the Portuguese crusader spirit, established in India in 1498 and immediately carried Eastward in the capture of Malacca—by then Muslim—in 1511. The third wave, when reaching Indonesia, was engaged in a race against the second. Thus, the further spread of Islam acquired a disproportionately important element of religious-commercial-political strategy.

As regards Sumatra, the second half of the 10th/16th century saw the islamization of the Lampung and Bengkulen areas; but it was only in 1919 that the last group of people in the inland parts of South Sumatra became Muslims. Menangkabau was islamized soon after the fall of Malacca by people from North Sumatra, the realm of Atjèh, who engaged in the spice trade. Indeed, during the 10th/16th and 11th/17th centuries the ever continuing spice trade served as the token under which virtually every major commercial-political-religious event in the archipelago took place. The Batak area, in central North Sumatra, took longer to be penetrated. The southern reaches were islamized during the third quarter of the 19th century, but the central part gave in slowly to Christianity. Somehow the islands West of Sumatra, Nias, eluded the appeal of Islam and also to an extent that of Christianity as well.

Kalimantan (Borneo) has kept its pagan interior up to the present. Its coastal areas have been settled, and largely islamized, by people from various other

parts of the archipelago, and particularly in the North and West, also by Chinese and Ḥaḍrami Arabs. The various emerging realms had invariably a Muslim, sometimes Ḥaḍrami, imprint. Notable amongst these were the realms of Banjarmasin, Kutai and Pontianak. The former lasted from the middle of the 10th/16th to the middle of the 19th century, and it included the Hulu Sungai area.

Celebes (Sulawesi), in its turn, remained mostly pagan in its central area where only the Toraja embraced Christianity. Its Northern tip became Christianized. But its two Southern tips, containing important maritime areas—again in the spice trade—, were islamized, mainly from Java, early in the 11th/17th century. This spread was not without violence.

The Moluccas succumbed partly to Portuguese efforts at christianization and then saw Catholicism replaced by Protestantism under Dutch pressure. But as from the second half of the 16th century the realm of Ternate was a centre of diffusion of Islam, both Westward and Eastward.

In the Lesser Sunda Islands, another clear demonstration is found of how the spread of Islam was related to political vicissitudes. The phenomenon of emergent realms imposing themselves by means of religious identification is visible even in these relatively remote parts. Thus, the Western tip of Bali and also the islands of Lombok and Sumbawa have been largely islamized at some time, while the remaining islands have hardly been touched by Islam until recently.

In Java, the political overtones of islamization have been even more noticeable. The Muslim coastal principalities already mentioned began as vassals of the Hindu-Buddhist kingdom of the interior. Gradually, there was a shift in supremacy. Once united under the realm of Demak, Muslim power could tip the scales. As from the second half of the 10th/16th century, all of Java and also Madura have become formally islamized: by leaps and bounds in the political centres and much more slowly in remote mountain areas.

A shift, gradual but important, in the overtones of Indonesian Islam has occurred with the onset of more effective and intensive direct contacts between Indonesia and the heartlands of Islam. It is sometimes argued that this process, which can perhaps be dated as beginning around 1875, is a re-islamization with orthodox overtones, aimed at replacing the rather vague Indonesianized variants of earlier days. In many places this must have meant the end to the sway of mystical ideas. At the same time it opened the gate for the reformist and modernist ideas of those days.

A renewed stress on the social and political implications of the Islamic identification, with consequences for the spread of Islam, has ensued from the emergence of nationalism. Although no precise information is available on each of the areas concerned, it is clear that since the emergence of nationalism, and especially since the end of World War II (August 1945), the still pagan populations of Indonesia have been under increasing pressure to embrace Islam. Having retained their separate pagan identities for so long, their apparent need is now to become integrated in the Indonesian nation, and the adoption of Islam appears propitious for the purpose. Curiously enough, comparable considerations in more sophisticated urban settings do not necessarily favour Islam. Indeed they prove here and there to favour a Christianity no longer identified with a foreign colonial élite.

As to the nature of the reception of Islam in Indonesia, the earliest more or less detailed data refer to Northern Sumatra in the early 17th century. There are Islamic manuscripts and there are (Dutch) eye-witness reports. The area was clearly still a major centre of diffusion of Islam. The data suggest a relative predominance of mysticism of the philosophical-speculative kind, represented by various brotherhoods; but it soon comes under the emergent attack of a more orthodox theology.

There has been much discussion on questions concerning the relative ease with which the Islam was received and embraced by Indonesians; and also concerning the way in which they then adapted it. Some of the argumentation follows lines of historical parallelism. It has been suggested that Hindu-Buddhist influence, having once become a noticeable mercantile force in parts of the archipelago, was induced to assume yet another variant, namely as a ritual legitimization of existing but changing power structures. Indeed, the priestly functions required for the purpose were not without precedent in older Indonesian tradition. It has been suggested furthermore that in comparable fashion the formal introduction of Islamic institutions has been superimposed on the mere establishment of trading communities of Muslims here and there in Indonesia, again as a means for existing or emergent powers to hold their own against competitors. Such a suggestion might seem weak, inasmuch as it could appear that the absence of a clergy and of the appropriate ritual should render Islam less suitable for the purpose. But one notes that during an apparently critical period of Muslim expansion Islamic scholars, and especially mystical philosophers, have played decisive roles as powers behind the throne—for example in Java the nine holy men (*walī*) credited with bringing Islam, and in Sumatra at least one mystic who also served as prime minister.

The third, the Western wave of influence, has injected itself into the archipelago as competitive, both commercially and religiously (that is, culturally), against the spread of Islam. It thus might have offered the Indonesians an option as regards the creed that could most suitably be adopted for purposes of selfcontinuation; but Christianity may never have appeared so attractive as Islam, in consequence of the continued non-integration of the Western element. In remaining alien, it did not really lend itself to adoption with modification. Church authorities have usually scorned attempts at a more or less sectarian, and mostly local, adoption of Christian ideas. Besides, inasmuch as Christianity is to Muslims a superseded religion, and one of protected status, they are not naturally inclined to embrace it.

In consequence, the religious map of Indonesia shows Christianity in a few areas converted from paganism before the advent of Islam (for example, part of the Moluccas, Northern Celebes, part of the Batak area of Sumatra) and amongst mixed urban populations. It shows Hinduism-Buddhism entrenched in one area (central and eastern Bali). It still shows survivals of paganism in some remote parts, mostly in the interior of islands. And it shows Islam as the religion that has won out in the long run, even though the political stress of the 1950's and 1960's has somewhat undermined its predominance. It is often said that the Muslims constitute 90% of the Indonesian population. Statistically unverifiable, this figure is generally accepted as a rough estimate. Given a total population of about 130 millions, this

makes the Indonesians one of the largest sections of the world Muslim community.

The specific characteristics of Islam thus spread and still spreading throughout Indonesia are so difficult to sum up that time and again disputes have arisen, mostly between non-Muslim observers, as to the question whether Indonesians are or are not true Muslims. Those trying to argue a negative answer have tended to assert that Islam is merely a veneer under which the solid base of Indonesian paganism, with here and there a top layer of Hindu-Buddhism, remains fully distinct. If there is truth in this, yet it does not detract from the efficacy and tenacity of the Islamic identification of the Indonesian Muslims. The rationalization and legitimation even of things possibly pre-Islamic in origin or conception yet currently effective will invariably occur in terms of Islam and be generally deemed adequate as such.

In matters of law, the Shāfiʿī school reigns supreme, and seems never to have suffered from real competition. Even so, the Indonesian situation may well have been more markedly complex than situations elsewhere, especially because colonial administration has tended to emphasize rather than to obscure such matters as the discrepancy between formal Islamic law on the one hand and customary law on the other. Indeed Islamic law has figured for long years as the least important of three competing systems: customary law, as represented by quite numerous and very different systems in the several parts of the archipelago, Dutch code law (constitutional and penal, not civil) as more and more emphatically imposed for purposes of uniform administration, and Islamic law itself, adopted by Indonesians for quite limited purposes only, and to an extent varying with time and place. The tendency has been to have each legal system represented by its own jurisdictional arrangements. In the case of Islam this has tended to bring to the fore the category of the scholars of Islam, the *ʿulamāʾ* or *kyahi*. Not only was this one way in which these scholars of Islam managed to maintain part of their importance dating back to the pre-colonial days of the early Muslim expansion; it also pitted them, unintentionally perhaps yet quite effectively, against the traditional élites of pre-Islamic days, the class who in Java are called *prijaji*. On the other hand, it is this very competition that excludes for Indonesia the possibility of an important public role, as in the heartlands of Islam, for religious functionaries like the *muftī* and the *ḳāḍī*.

What does appear, however, is the scholar in a slightly different, somewhat less traditionally institutionalized role. The politically effective scholar is perhaps the main common link between the political structure in the heartlands of Islam and those of Indonesian tradition as modified, here and there, by Hindu-Buddhist influence. At the same time, he has made for continuity in the history of Indonesian Islam ever since its adoption. He is the power behind the ruler, at once effectuating and rendering visible the Islamic character of the state. It does not matter, in this connection, that the nature and operations of the state in question remain conceived along typically and traditionally Indonesian lines. Thus it is to him, for example in the semi-mythical form of the nine *walī*s of Java, that the islamization of Indonesia is mostly ascribed. And it is again upon him, once he has regained his public voice through modern organization, that the task devolves to speak the binding or unbinding word on political authority. It is he, once more, who plays a leading role in recent and contemporary political organizations of Muslims.

Of the legal institutions of Islam, the *waḳf* should be mentioned at this point. There are no specifically Indonesian provisions or uses, even though the institution occurs quite generally. It is assumed that the economic importance of property thus set aside is less than in many other Islamic countries. The matter of guardianship has tended to be difficult, as almost everywhere else.

Turning to Islamic education, one can distinguish two main types. One is the traditional boarding school, the *pesantrèn*, also called *madrasa*; the other is more modern education as provided originally by private organizations as for example Muhammadīya, to be mentioned below. The latter type now embraces the full range from elementary to higher education. As regards the former type, some of its features are perhaps still reminiscent of the Persian or Turkish dervish conventicle. But the preponderant feature of the *pesantrèn*, in its turn perhaps reminiscent of the Indian *ashram*, is to be a centre of learning and of education for pupils from nearby and—if it is well-known—also from far away. The leader, *kyahi*, is primarily the scholar who retains his authority over his pupils even after having granted the *idjāza* [*q.v.*] or licence to teach. He will be the spiritual leader and mentor at all times. In the notion of the teacher, the Indian idea of the *guru* has come to emphasize the Islamic respect for the *ʿālim*. There has traditionally been unorganized, yet more or less regular, intercourse between the best of these schools and the centres of learning at Mecca and Cairo: the former reflecting, with a time-lag, what went on in the latter. It has proved extremely difficult, both in colonial days and later, to forge a link between this type of schooling and so-called modern education. This has by and large worked to the detriment of traditional Muslim education. Gradually, the name *madrasa* has been adopted for religious schools conforming to a more "modern" pattern of education. By 1954, there were three levels of these, namely elementary (13,057 schools), intermediate (776), and secondary (16).

Another peculiar aspect of Indonesian Islam is architecture. With a few fairly recent exceptions, of imitation of Arab style (*e.g.*, Medan, Kebajoran), mosques in Indonesia show a style that illustrates nothing better than the continuity from pre-Islamic into Islamic periods. Mosques like the one of Kudus recall Hindu-Javanese building styles, even though they are now unequivocally recognized as Islamic buildings. A common feature is the roof in three or four layers or tiers, almost pagoda-like, that contributes significantly to the circulation of fresh air. An entirely Indonesian feature is the use of the *bedug*, a huge drum, to announce the times of prayer even to those who might fail to hear the *adhān*. On the other hand, the various grades of mosque personnel are hardly exceptional.

As regards the fulfilment of religious obligations Indonesians are again not very special or exceptional. The *ṣalāt* is variably performed, as everywhere; the payment of *zakāt* is haphazard. In matters of ritual purity Indonesians are relatively strict, perhaps on account of traditions older than Islam. Also the pilgrimage has always tended to be an attraction and a challenge to Indonesians. Relatively many, including women, will perform it when circumstances allow. Indeed the pilgrim may achieve a kind of special status in his community. The *ḥadjdjī* is a potential leader of opinion if he returns to a relatively

small and remote community. The pilgrim will not enjoy great prestige unless he is at the same time more or less learned in Islamic doctrine. This applies the more since the pilgrimage has become safer and more within the means of relatively many: all this thanks to means of transport made available by non-Muslim Westerners. The attraction of the pilgrimage is demonstrated by the tendency for Indonesians to borrow money for the journey, in contravention of the explicit injunctions of Islam.

Mysticism remained influential for quite some time. In Northern Sumatra, its sway must have stretched at least into the first decades of the 20th century. In Southern Celebes, it seems to have lasted almost until the Japanese occupation. In these areas there are indications of the existence of local chapters of various mystic orders, including the more famous ones from the heartlands of Islam. The list of brotherhoods is impressive and includes such famous names as S̲h̲ādiliyya, Ḳadariyya, Naḳs̲h̲bandiyya, K̲h̲alwatiyya, Samaniyya, Rifāʿiyya, Tid̲j̲āniyya. There is however no effective record of their organization, let alone of their functioning. Nor is it clear what role they have played in the spreading of Islam or, for that matter, in society at large.

The two areas referred to differ from the third area influenced by mysticism, Java, in one major respect. In Javanese Islamic mystical writings a clear and decisive adaptation of mystical ideas is manifest. At the point where Sumatran took over from Indian mystics, not much of a break occurred; but here, one sees a complete change in the spiritual climate. On the other hand, this specifically Javanese mysticism does not seem to have spread to other islands.

Everywhere, orthodox teachings have gradually gained the upper hand. Unfortunately, this process and its causes have hitherto eluded historical research. Accordingly, it comes as something of a surprise to see that in the middle of the twentieth eentury numerous organizations of a more or less esoteric (*kebatinan*) nature flourish, several of them adorned by names of famous mystical brotherhoods, that seem to attract quite a few urban intellectuals.

A few minor special features remain to be listed.

First and quite interestingly, there are few locally scattered indications of S̲h̲īʿi influence; Ḥasan-Ḥusayn celebrations, for all practical purposes in no regular relationship to S̲h̲īʿi doctrine, occur in certain places in the Menangkabau area, West Sumatra, which owing to its matriarchical pattern of customary law has seen several events in which Islamic doctrine played a rather exposed role.

Another feature, rather specifically central Javanese, is the so-called *wong putihan*, or "white (in the sense of pious) person". Relatively few in numbers, these people are notable and indeed conspicuous by their devotion to (orthodox) Islam: they tend to congregate in the neighbourhood of a mosque.

After this listing of more or less traditional features of Indonesian Islam it is necessary to consider recent and contemporary developments.

The gradually increasing efficacy of colonial rule had its consequences. For example, the relative importance of the various centres of diffusion of Islam were affected by the circumstances that Dutch commercial and political action transferred the centre of operations in the archipelago to Java, with the hitherto relatively unimportant port of Jakarta (Batavia) as the key point. Again, the response to Dutch expansion, becoming manifest off and on as resistance in various forms (including occasional violence, for example the war against Dipo Negoro in Java, 1825-30), tended to assume Muslim character. The very polarization between Dutch impact and continuing Indonesian identity enhanced a response in terms of Islamic identification on the Indonesian side. This tendency becomes more predominant around the beginning of the 20th century, in two forms. The earlier one is more or less forcible resistance, often in the name of Islam. The later one, to be mentioned below, is political organization, usually with its primary goals stated in terms other than resistance, again often in the name of Islam. In the latter case, Islam tends to become instrumental, a legitimation for a nationalism that may or may not articulate itself in Islamic terms.

The turning-point was, in a sense, the period of enlightenment in colonial policy, which was at the same time the period of moie or less forcible introduction of effective Netherlands-Indies administration in parts of the archipelago hitherto not really controlled. Most notable for its expressly Muslim resistance was the so-called Atjèh war of 1873-1904. This is also the period during which the Netherlands Indies authorities, guided by the famous orientalist and islamologist C. Snouck Hurgronje, adopted a new policy. Its aim was, in the last resort, to promote effective Dutch rule by removing Islamic motives for resistance; or, to express it more crudely, to rule effectively notwithstanding the potential or actual adverse implications, for such rule, of the fact that so many Indonesians identify as Muslims.

During roughly the same period, Indonesian Islam shows a variety of tendencies, as is to be expected in times of turbulence.

To begin with, Indonesia has seen the reflexion of the so-called reformist or modernist tendencies in the heartlands of Islam, even though no Indonesian thinkers have arisen who could be compared with modernistic Muslim leaders in an area like the Indian subcontinent. It has even seen its own variant of the breach between the two components of this tendency: one ending up in the rationalism of a Muslim assertion of a predominantly political nature, the other in a most typically Indonesian variant of fundamentalism entrenched in local chauvinism. The former trend will be discussed in more detail below. The latter, somewhat belated in its effective manifestation, appeared after the end of the Japanese occupation, first in the remote mountains near the South coast between Central and Western Java in the form of a small, entrenched state, the *Negara Dār ul-Islām* founded by Kartosuwiryo in 1948 (suppressed in 1962), and then also as a militant movement in areas like Southern Celebes and Kalimantan (1949). It was subdued, but not necessarily eliminated so far as its true inspiration goes, by the Indonesian state.

In the second place, a range of moie or less sectarian movements and organizations appeared. These were inadequately studied at the time. A common trait seems to be that if they strive for the reassertion of the Islamic identity, this does not so much aim at determining the full round of life but rather at providing adequate shelter under adverse circumstances. Some of this sectarianism is imported from elsequere in the world of Islam. Wahhābism see WAHHĀBIYYA], a forerunner here as everywhere else, had made its influence felt in Sumatra and also in Java already by the end of the 12th/18th century. The Indian sect of the Aḥmadiyya [*q.v.*] maintained missionaries in Indonesia for a number of years before and after the Japanese occupation; but it

does not appear to have reached more than a handful of more or less marginal individuals, mostly in towns. Not unlike the Aḥmadiyya in their basic inspiration, various sects have emerged on Indonesian soil in the course of time, each representing some syncretistic attempt to harmonize elements from various sources (old-Indonesian pagan, Hindu-Buddhist, Christian, Muslim) into religious-philosophical teachings, not without mystical or even magical (invulnerability!) elements, to satisfy thirsty souls. The contemporary *kebatinan* movements have been mentioned. Some parts of Indonesia are clearly more fertile in this respect than others; at all times the appeal of sects of this kind is mostly local. It is not unusual to find the leaders of such sects described as *kyahi*, the word that, as stated, also serves as the Indonesian translation of *ʿālim*, scholar in the sciences of Islam.

In the third place, there is the phenomenon, already alluded to, of Islam serving as an ideological support for political action. This places Islam in a somewhat odd context, namely as one out of three main competing bases for the political self-assertion that nationalism purports to achieve. Another is Marxism, whether in the strict (Russian or Chinese) communist form or in more diluted, socialist-revisionist presentations. The third is nationalism pure and simple, which assumes the goals of national self-assertion as against Western domination to be a sufficient ideology in its own right: in the last resort, a kind of anti-ideology, as represented, for example, in Sukarno's ideal of the ongoing revolution. In this connection, a source of confusion exists in the circumstance that Islam as an ideology is not necessarily restricted to one of the three basic positions, but will in fact tend to permeate each of the others as well, if only to an unclear yet limited extent. The point is that whilst the three formulae are mutually exclusive, and thus fiercely competitive, they are at the same time necessarily comprehensive, in the sense that each must make a point of embracing any of the specific features of the others, lest it forfeit public appeal. After all, each is, by its own standards, the movement that embodies the entire nation in its effort to reassert itself. Indeed, before independence they were for all practical purposes one and undistinguishable.

The actual manifestation, during the four decades prior to World War II, of the three tendencies just described, has been greatly influenced by the adoption of Western organizational patterns and communication devices. This is the period of emerging Muslim organizations of many different kinds. Sometimes (as in the case of most sects) they are regionally confined; but not seldom they aim at, and achieve, a nation-wide scope.

The first properly Indonesian association, a Javanese one with mainly educational purposes, was founded in 1908. It was followed in 1911 by the first typically Muslim organization, *Sarekat Dagang Islam*, later *Sarekat Islam*. Conceived as an organization of (small) traders, it was initially economic rather than political, and anti-Chinese rather than anti-Dutch. Within five years it was perhaps still to some extent religiously determined and *kyahi*-influenced: but to all intents and purposes it had become a political party of a clearly nationalist character.

The year 1912 saw the establishment of a somewhat different organization, the Muḥammadiyya. Guided by such men as K. H. Dahlan, it represented an attempt to spread amongst Indonesian Muslims the modernism then fashionable in Egypt and India. Given the Indonesian setting, this movement was perhaps somewhat more orthodox-puritanical than similar organizations elsewhere, and also somewhat more concerned with education. Significantly, these and other organizations tended to operate a number of subsidiaries, through which to reach special categories of people, such as women and youth.

A third Islamic organization emerged in 1926, under the name of *Nahdat ul-ʿUlamāʾ*. It was meant to serve as a stronghold of more traditionalist orthodox ideas as upheld by the great majority of established scholars. But whilst competing for public support with the other two and whilst unable to avoid acquiring political significance, it was prevented from becoming fundamentalist in the same way as, much later, the *Dār ul-Islām* movement did.

Among the three organizations, as also in connexion with other political organizations, a pattern of unsteady and not always easy relationships developed; the mounting significance of nationalism tended to make for a special kind of unity, effective specifically as against the impact of Dutch colonial rule. Together, these organizations have succeeded in galvanizing the highly varied Indonesian population into an emergent nation, and one that in asserting itself in response to colonialism, however developmentally oriented that might be, acted in certain respects as more uniformly Muslim. On the other hand, the simultaneous existence of important non-Muslim parties and organizations proves that there were limits to political unity in the name of Islam.

A shift in organizational alignment occurred in 1937, with the Muḥammadiyya and the Nahdat ul-ʿUlamāʾ jointly creating the *Majlis ul-Islām il-Aʿlā Indonesia* (MIAI), the Supreme Islamic Council of Indonesia. This competed with the third organization, then called *Partai Sarekat Islam Indonesia*, until their merger in 1939. But in 1938 a new *Partai Islam Indonesia* had been created, formed to some extent from the earlier *Jong Islamieten Bond* (Young Muslims' Association).

The Japanese interlude, 1942-5, had a double significance for Indonesian Islam. Envisaged in the long run, it hastened decolonization in a manner entirely unconnected with Japanese intentions. Seen in the short run, it brought a critical change in Islamic policy on the part of the ruling authorities; and the change was not quite the same in Java as it was in the other parts of the country.

The Islamic policy of the Japanese forces was a relatively well-prepared two-pronged attempt to solve two problems at once: to nip any Muslim opposition in the bud, and to obtain if possible public allegiance through making Muslim leaders of public opinion rally to the Japanese cause. A specially trained Japanese staff was in charge. On the one hand the existing organizations were abolished and a series of efforts made to replace them by one comprehensive organization that would abide by Japanese instructions. On the other hand, the *kyahi* category were made into special targets of opinion-control. This went to the extent of making them attend special courses. In order to support the activities concerned, a network of offices was maintained throughout the area, as a kind of perverted development from the one Office for Indigenous Affairs that the Dutch had maintained previously. Notwithstanding all this, there was an element of wavering on basic issues in the Japanese Islamic policy that only strengthened the urge of Indonesian Muslims to assert themselves regardless of outside pressures, and that did nothing to help them articulate this urge.

The end of the Japanese occupation, in August 1945, ushered in Indonesian independence, in two stages. The emergency declaration of independence of 17 August [see DUSTUR, p. 665] resulted in an Indonesian Republic, really effective in part of Java only, vying with Dutch attempts to set Indonesia on its feet again according to a new formula. Sovereignty was officially transferred in 1949, to the Indonesian state. During the intermediary stage, the two claimants for authority were equally preoccupied with soliciting the allegiance of Muslims; and in the process Muslims were largely left to their own devices in their attempts to overcome the disruptive effects of Japanese-imposed organization and ideas.

Since independence, Indonesian Islam has played mainly two roles in public life. On the one hand, it is one of the main tributaries to the national identity and indeed to national ideology. The *Pantja Sila*, the five-point national doctrine, has been carefully phrased so as to allow Muslims to recognize it as theirs, without alienating non-Muslims. One of the five points is the recognition of the overlordship of the Almighty. Yet as an ideological creed it stands for a nationalist ideology, which is in the last resort competitive with Islamic ideology and which as such is a rallying point for Christian and other groups. All this is reflected at the more institutional plane. Insofar as independent Indonesia had to have its own Islamic policy, and one necessarily different from both the Dutch and the Japanese policies, it manifested itself as part of the activities of the newly installed Ministry of Religion. Intended to cater for the needs of any religious community, this ministry has inevitably acquired a strong Muslim imprint, and this with a *kyahi* shading.

On the other hand, Islam has become one of the three major political forces in the country, in the sense that it has proved possible to use people's identification as Muslims as a means to rally them around certain political causes, not necessarily of a clearly or exclusively Islamic nature. This is sometimes explained as an after-effect of denominationalism in the Dutch political party system; but the true explanation may well lie in the traditional role of Islam in the framework of Indonesian self-identification. A significant occurrence in this connexion is the Piagam Djakarta of June 1945, a kind of preliminary document to the constitution, in which mention is made of Islamic law as having to be applied to all Indonesian Muslims. As a political force Islam finds itself competing with two other forces already mentioned, namely Communism and ideological nationalism. Under these conditions there does not appear to exist an immediate urge for Muslim leaders to elaborate and expound relatively novel ideas of an explicitly and consistently Islamic nature. In effect, the pre-war pattern of more or less exclusively political organizations of Muslims has returned, with names somewhat modified—this also due to Japanese interference—and still with the same unstable mutual relationships.

The Mashumi (*Majlis Shuro Muslimin Indonesia*), the Japanese replacement for MIAI, was at first reorganized into *Partai Politik Islam Indonesia* [see ḤIZB, p. 534], and as such considered itself the one and only political organization of Muslims. But it did not long remain so. The *Partai Sharikat Islam Indonesia* once again came back, thus upholding a record of vitality dating back to 1912 and unhampered by earlier defections (1923, 1932, 1936, 1938). As a more or less local organization for Menangkabau (Sumatra), there emerged the *Partai Islam "Persatuan Tarbiyah Islamiyah"*. In 1952, the *Nahdat al-ʿUlamāʾ* broke away from the Mashumi and established itself as an independent party, thus resuming a tradition begun in 1926. Under the political pressures of the day, the Mashumi and PSII were suppressed and an attempt at a reunification of the remaining organizations was made in 1959. After the end of the Sukarno régime, yet another Islamic party emerged in 1967, the *Partai Muslimin Indonesia*. The similarity of political platforms as between these several parties is such that it is not really clear which could be identified as fundamentalist and which as more or less "modernist". Each and every one figures primarily as the political organ of all the Muslims of the country, with a degree of mutual competition as the inevitable result.

Under the circumstances, yet another dimension of Islamic life demands attention. This is the need for the consciously pious individual Muslim to envisage, and accordingly to mould, life on the socio-economic and political plane in accordance with the teachings of Islam. So far, some of this need finds expression (but hardly any effectuation) in the *kebatinan* movements already mentioned. But political parties and other available institutional forms seem hardly equipped to satisfy it.

vi.—LITERATURES

In the vast area of the Indonesian archipelago, where more than two hundred languages are spoken, we find as is only natural various literatures. Insofar as these languages are spoken by Muslims (some parts of the archipelago were not islamized) the literatures of these languages underwent, some to a greater, others to a lesser extent, the influences of Islam. This influence is two-fold: on the one hand Islam caused much of the older literature, in particular religious works, to disappear; on the other hand it enriched these literatures by substituting new genres and new works for those that fell into oblivion, and by adding to the literature that already existed.

In this article we confine ourselves to those aspects of Indonesian literature that bear on Islam. The influence of Islam on the literatures of Indonesia is predominantly an influence of Islam as a religion. Its main features are translations, reworkings and adaptations from Arabic and Persian works written with a view to educating and for purposes of edification: textbooks of Arabic, grammars, translations

of the Ḳur'ān, commentaries, sacred history, philosophical treatises and religious tracts, works dealing with theology, law and mysticism, in short with any aspect of Islamic spiritual life. The *adab*-literature, an important element in the civilization of Islam, poetry and belles-lettres in general, is rather poorly represented compared to the mass of purely religious works; works dealing with Islamic sciences, technical works and works on geography and Islamic history are virtually non-existent or found in a very few instances only.

Notwithstanding the great and visible impact of Islam on Southeast Asia, the influence of Islam was a limited one and remained confined mainly to the sphere of religion. This can easily be explained from the fact that the Indonesian archipelago was situated on, or even outside, the periphery of the civilization of Islam. Moreover, seen in a historical perspective, Islam came late to Southeast Asia and the process of islamization stretched over several centuries; it is, in fact, still continuing at the present day.

For a long time, from the 7th/13th century until well into the 11th/17th century, contacts between Indonesia and Arabia were difficult and few. The majority of those who undertook the long and dangerous voyage to the great centres of Islamic spiritual and cultural life did so in order to perform the Pilgrimage, often combining it with a visit to other holy places. Quite a few, however, stayed on in Arabia for a longer period, sometimes for several years, in order to deepen their knowledge of religion. The works which they studied, copied and later brought with them to their country of origin, were almost exclusively textbooks of religion.

Another factor of great importance was the trade within Asia. This trade made it necessary for many foreign merchants—Arabs, Persians and in particular traders from the mercantile ports of the Indian subcontinent—to settle in the archipelago, and it may be assumed that besides bringing their commodities, they also brought cultural goods, among them literary works such as stories and romances which were adapted or translated into Malay and so found their way all over the archipelago. The harbour cities were centres of radiation of this international culture. They had had from of old an international character with a very mixed population. The majority of those participating in the inter-Asiatic trade were bilingual or even spoke more than two languages, and this considerably facilitated the adaptation, translation and diffusion of products of Islamic literature in the archipelago.

The medium which was made use of by Islam for the spread of the faith was the Malay language. Although data about the history of Malay are rather scant, it may be assumed that already before the coming of Islam to the archipelago this language was the common vehicle for interinsular intercourse. The new task assigned to it has left many traces in the Malay language. Not only did the vocabulary become enriched with a great number of Arabic words and terms, but also Malay syntax underwent the influence of Arabic, and moreover (but this is perhaps a development which had already set in a long time before) the Malay language, seen from the viewpoint of morphology, underwent a process of simplification, and this in turn eventually led to the development of Malay into Bahasa Indonesia, the national language of the Republic of Indonesia. For a long time the original Indian-Indonesian script remained in use side by side with an Arabo-Persian script which had been adapted to the needs of Malay orthography, but in the end first became superceded by the latter. It can quite properly be said that Malay literature, unlike, *e.g.*, Javanese literature, is in fact an Islamic literature. And it is through this Malay Islamic literature that Islam penetrated into the other languages and literatures of the archipelago to the extent that the speakers of these languages had embraced Islam.

The majority of Malay literary products (and the same is valid for the other languages of the archipelago, too) is anonymous, *i.e.*, generally names of authors and editors are not known, and literary works cannot be dated, *i.e.*, it is not possible to establish with any degree of certainty the year or sometimes even the period when they were written. This, of course, is a serious disadvantage, which makes it extremely difficult to write a history of Malay literature in which past developments are shown. Therefore, the most satisfactory method for the time being is to divide such products of Malay literature as developed under Islamic influence into a set of categories. Many, if not all, of the titles mentioned below are also found in other languages of the archipelago, such as Achehnese, Javanese, Sundanese, Macassarese, Buginese, etc.

The following groups are to be distinguished:

(1) Ḳur'ānic tales, or tales about prophets and other persons whose names are mentioned in the Ḳur'ān. Some of these works are compilations dealing with all prophets (*Hikajat anbia*), others contain the story of individual prophets (*Hikajat Jusuf, H. Nabi Musa munadjat, H. Wasijjat Lukman al-Hakim, H. Zakarija, H. Radja Firaun*, and so on). On the one hand these tales have an edifying character, on the other hand they are intended to complement and explain certain stories found in the Ḳur'ān and as such they serve as a commentary on the Ḳur'ān, not primarily in the theological sense of the word but rather with a view to adding to historical and general knowledge. The subject matter and contents of these tales generally agree with Arabic tradition as found in such great commentaries on the Ḳur'ān as that of al-Bayḍāwī or that of al-Dj̲alālayn and in the *Kitāb Ḳiṣaṣ al-anbiyā'* of al-Kisā'ī. These tales were extremely popular, as was the *Hikajat Radja Djumdjumah*, containing the discussion between Nabī ʿĪsā and a skull of an infidel king on the various punishments in hell.

(2) The second group consists of tales about the prophet Muḥammad himself. The subject matter is, of course, derived from Arabia but reached the archipelago through Persian versions. They contain tales about his life, about what happened before his birth, various legends about his birth, episodes from his life and tales about his miracles. Widely known is the *Hikajat Nur*, with a strongly mystical tenor, about the mystical principle of Light inherent in prophets from before creation and their essential characteristic. This mystical principle of Light is a starting-point for various mystical speculations. The *Hikajat Nur* is also the opening chapter of a number of manuscripts of the *Hikajat Muhammad Hanafijjah* (see below). Very popular was also the *Hikajat Nabi bertjukur*, about the shaving of the Prophet's head by the archangel Dj̲abra'īl. The number of manuscripts of this text is fairly large, and moreover it was several times printed. Reading this text was considered to give protection from various disasters and illnesses and to be a guarantee for giving the correct answer to the questions of the angels of the grave, Munkar and Nakīr. Numerous also are

manuscripts of the *Hikajat Nabi mi'radj*, about Muḥammad's ascension to heaven, a tale found in various versions. Of a different kind again are tales like the *Hikajat Nabi mengadjar anaknja Fatimah* (Teachings of the Prophet to his daughter Fāṭima), a kind of Mirror for Women, about the duties of a wife towards her husband, and the *Hikajat Nabi mengadjar Ali* (Teachings of the Prophet to ʿAlī), which is of a mystical character on the four stages of the mystical path, *sharīʿa, ṭarīḳa, ḥaḳīḳa* and *maʿrifa*. On the miracles of the Prophet we find texts like *Hikajat bulan berbelah*, which contains the well-known story of Muḥammad splitting the moon. Edifying and exhorting the reader to a life of piety are among other texts the *Hikajat Iblis dan Nabi Muhammad*, containing a discourse between the Prophet and Iblīs; *Hikajat tatkala Rasul Allah memberi sedekah kepada seorang derwisj* (the tale of how the Prophet of God gave alms to a dervish), and *Hikajat Nabi dan orang miskin* (the Prophet and the poor man), the last two containing an appeal for generosity towards the poor. In an enumeration of tales about the Prophet mention must be made of the *Hikajat wafat Nabi* (The Prophet's death), reworked from Persian, and the *Hikajat Mulud* (*maulud, maulid*), commemorating the Prophet's birth. Widely known both in the past and in modern times is the *Mulud berdjandji* (a popular etymology of *Barzandji*, the name of the original author, an Indian), a liturgical text recited on the occasion of the birthday of Muḥammad. In addition, mention must be made in this connexion of the wellknown and very popular *Burda* [*q.v.*] of al-Būṣīrī, sometimes with interlinear Malay translation.

(3) The third group of tales consists of those devoted to persons who lived at the time of Muḥammad, both *ṣaḥāba* and others, opponents of the Prophet. In the first place we must mention the *Hikajat Radja Khandak* (*Hindik, Unduk*, from Arabic *khandaḳ*, moat), containing a very romanticized story of the War of the Ditch, the contents of which considerably deviate from the facts of history. The Arabic word for moat (*khandaḳ*) has become a personal name in this tale. The same is the case with the place-name *Badr*, which became the personal name of Radja Khandak's son. Radja Khandak is defeated by ʿAlī, who in this tale also enters into battle with a *Radja* (= king) *Ifrit* and a *Radja Feringgi*, *i.e.*, king of the Franks. Other tales of this kind are the *Hikajat Radja Khaibar* and the *Hikajat Radja Pandita Raghib*, whose historical basis is Muḥammad's conquest of Khaybar, but the name Khaybar is the only link relating these tales to history. These tales are romanticized stories of a very fantastical nature, which in every respect deviate from Arabic historical tradition. They must have originated in the archipelago. This is also the case with the *Hikajat Samaʿun*. The main characters of the *Hikajat Samaʿun* are Māriya the Copt and Samāʿūn. The latter is introduced as a son of the famous army commander Khālid b. al-Walīd of the early conquests of Islam. Of this tale there is even an Arabic version which also must have originated in the archipelago, translated into Arabic by a non-native speaker of the language. In addition, mention must be made of the *Hikajat Tamim al-Dari*, also very fantastic, containing the adventurous life story of the person of this name who, originally a Christian, embraced Islam during the lifetime of Muḥammad. There exists an Arabic version of this story, but the Malay tale apparently goes back to a Persian-Indian version.

The last group of tales to be considered in the frame-work of tales about persons around the Prophet are those of which ʿAlī, Fāṭima, their children Ḥasan and Ḥusayn and their stepbrother Muḥammad b. al-Ḥanafiyya are the main characters. About the last mentioned there exists a famous romance, or perhaps better "epic tale", the *Hikajat Muhammad Hanafijjah*, also known under the title of *Hikajat Ali Hanafijjah*. The majority of manuscripts of this text commence with the tale of the *Nūr al-nubuwwa*, and then pass on to a description of what happened to the main character, who here in this tale contrary to historical fact is victorious over Yazīd, but at the end withdraws into seclusion and lives on as a kind of hidden *imām* who will reappear to his followers in due time. This *hikajat* goes without a doubt back to a Persian original. Reminiscent of the martyrdom of Ḥusayn is the *Hikajat Tabut* (The Coffin), so named after the coffin which used to be carried round in procession at Padang and Bencoolen in former days. In this tale Shīʿī influence is obvious, but is probably due to Indian troops stationed there during the British interregnum.

(4) An important and interesting group of tales are those dealing with the heroes of Islam. Without going into details we mention here a few titles only: the *Hikajat Iskandar Dhu 'l-Karnain*, the tale of Alexander the Great, which is also found in numerous other languages outside Indonesia. The Malay tale is probably a translation of a harmonized Arabic-Persian version; the *Hikajat Amir Hamzah*, in Malay reworked after a Persian original, too, but with Malay extensions; the *Hikajat Saif Dhu 'l-Jazan*, on the half-legendary, half-historical pre-Islamic ruler of South Arabia, translated from Arabic; and finally, the various versions of the *Hikajat Sultan Ibrahim ibn Adham*, the renowned saint so highly regarded in Islamic tradition.

(5) A very copious group consists of the theological works in the stricter sense of the word. This literature can perhaps best be characterized with the name "*kitab*-literature", religious and juridical works and treatises bearing on the three-fold Islamic "knowledge", namely *ʿilm al-kalām, ʿilm al-fiḳh* and *ʿilm al-taṣawwuf*, together with the disciplines pertaining to it. As a transition between the groups already mentioned above and this *kitab*-literature may perhaps be considered the *Hikajat* (or *kitab*) *Seribu Masa'alah* (The Book of the Thousand Questions), well-known in world-literature and (together with the Ḳur'ān) among the first works in Arabic which already at an early stage were translated into various European languages. In the Indonesian archipelago, too, this work found many readers. Besides the redaction in prose, at least one versified version is known to exist. It contains the tale of the Jewish scholar ʿAbd Allāh ibn Salām of Khaybar who put a number of questions to Muḥammad (cosmological and eschatological questions, questions about heaven and hell, and questions pertaining to secular, *i.e.*, non-revealed, knowledge) and who embraced Islam when the Prophet was able to answer his questions in a satisfactory way.

This *kitab*-literature is very extensive. In fact, it is a technical literature, written for and studied by a certain group, the religiously minded and in particular the theologians and the teachers of religion. The language is Malay, but a Malay which is characterized by a multitude of technical terms and shows the influence of Arabic both in syntax and in vocabulary. It is this genre of literature that has exercised a considerable influence on the Malay

language. The greater part of this literature was reworked and translated from Arabic, in several cases in Mecca and Medina, by people from Indonesia for the benefit of those of their compatriots at home who had no knowledge of Arabic. The author's and translators' names of a number of works of this kind are known, and it is here that Malay literature somewhat loses its characteristic anonymity. In accordance with Arabic custom these authors used to add to their names a word indicating their place of origin, so that their names are followed by such words as *al-Palimbānī, al-Bandjārī, al-Samaṭrā'ī, al-Fanṣūrī, al-Būnī, al-Makasārī, al-Kalantānī, al-Faṭānī*, and so on. The subject-matter treated in this *kitab*-literature shows a great variety, comprising in effect all aspects of Islam as a religion: the *Ḳur'ān, tafsīr, tadjwīd, ḥadīth, arkān al-Islām, fiḳh* and *uṣūl al-fiḳh* in the widest sense of the word. Some of them are voluminous compilations, others are small and deal with one special subject only, such as prayer, marriage or certain aspects of the law of inheritance. Numerous, too, are works dealing with mystical knowledge (*ilmu sufi, ilmu tasawwuf*), *ṣūfī* orders, treatises on *dhikr*, collections of litanies (*rawātib*) and *primbons*, books of notes on various subjects. Then there are collections of prayers (*du'ā'*). A special group is formed by collections of *djimats* (from Arabic *'aẓīma*), small booklets containing prayers and charms, often written in a very corrupt Arabic, which serve as a means of protection from the machinations of enemies and as a cure for illnesses.

During the 11th/17th century, in the flourishing period of the Sultanate of Atjèh in the North of Sumatra, we meet with four outstanding religious leaders whose influence was felt all over the Indonesian archipelago for a long time afterwards, namely Ḥamza Fanṣūrī, Shams al-Dīn al-Samaṭrā'ī, Nūr al-Dīn al-Rānīrī and 'Abd al-Ra'ūf al-Singkilī. The Achinese court played a prominent role in the development of the Malay religious literature of the 11th/17th century. At that time there flourished in Acheh a heterodox mysticism based on the doctrine of the seven grades of being (Ibn al-'Arabī, 'Abd al-Ḳādir al-Djīlānī), known under the name of *Wudjūdiyya*. Ḥamza Fanṣūrī [*q.v.*] is famous on account of his mystical *sjairs* (a genre of Malay poetry with rhyme-scheme a-a-a-a/b-b-b-b) of great lyrical power and outstanding literary value in Malay literature, such as the *Sjair dagang* (the Poem of the Wanderer), *Sjair burung pingai* (the Poem of the *pingai* Bird) and *Sjair perahu* (the Poem of the Ship). In addition, he has a number of prose-works to his name, *e.g.*, the *Sharāb al-'āshiḳīn*, consisting of seven chapters, the first four dealing with the four stages of the mystical path (*sharī'a, ṭarīḳa, ḥaḳīḳa* and *ma'rifa*), the two following chapters on the Being (*wudjūd*) and Attributes (*ṣifāt*) of God, and the last chapter on *berahi dan sjukur, i.e.*, mystical enthusiasm; another prose-work ascribed to him is entitled *Asrār al-'ārifīn fī bayān 'ilm al-sulūk wa 'l-tawḥīd*, which also is a mystical work. Commentaries on several of Ḥamza's works were written by Shaykh Shams al-Dīn al-Samaṭrā'ī, known also under the name of Shams al-Dīn of Pasai. Shams al-Dīn, who died in 1039/1630, also wrote several works, but there is some doubt whether all the works ascribed to him are really his. Some of his works are in Arabic, *e.g.*, *Djawhar al-ḥaḳā'iḳ*, some in Arabic and Malay, *e.g.*, *Nūr al-daḳā'iḳ*, others in Malay, *e.g.*, *Mir'at al-mu'min*, an orthodox catechism in questions and answers.

Nūr al-Dīn al-Rānīrī (d. 1068/1658 in India) was (as is indicated by his *nisba*) born in Rānīr (modern Rander) in India and therefore was not a Malay. He was a prolific writer, who during his comparatively brief stay in Atjèh (1047/1637-1054/1644) wrote a great number of works, some of them voluminous, both in Arabic and in Malay. Some of his works were written outside the Indonesian archipelago. He was an orthodox *shaykh*, who took great pains in his works to attack the mystical school of Ḥamza Fanṣūrī and Shams al-Dīn and their followers. Among his polemical works directed against the *wudjūdiyya* are the *Tibyān fī ma'rifat al-adyān*, consisting of two *bābs*, one dealing with the various religions from Nabī 'Īsā until Muḥammad, the other about the variant tenets adhered to by the religious schools; and in particular his *Ḥudjdjat al-ṣiddīḳ li daf' al-zindīḳ*; further *Ḥall al-ẓill* and *Shifā' al-ḳulūb*. Widely known and still read today is his *Ṣirāṭ al-mustaḳīm* (*sic*: the first article is dropped according to Indonesian usage), a translation from Arabic, and his voluminous *Akhbār al-ākhira fī aḥwāl al-ḳiyāma*, a treatise on eschatology and after-life, compiled from various Arabic sources. The last book begun by al-Rānīrī but left uncompleted owing to his departure from Atjèh was *Djawāhir al-'ulūm fī kashf al-ma'lūm*. It was completed by one of his students. It is an important work, in which al-Rānīrī gives a detailed and systematic account of his theological views. For his large encyclopaedic work, *Bustān al-salāṭīn*, see below.

'Abd al-Ra'ūf of Singkel, after his death known in Atjèh under the name of Teungku di Kuala (he presumably died about the beginning of the 12th/end of the 17th century) studied in Arabia for 19 years, amongst others with Aḥmad al-Ḳushashī and Mawlā Ibrāhīm. After obtaining the *idjāza* from the latter, he returned to Atjèh where he introduced the Shaṭṭāriyya *ṭarīḳa*, which was very popular in Indonesia for a long time. (The Shaṭṭāriyya *ṭarīḳa*, however, also reached the Indonesian archipelago through other channels independently of 'Abd al-Ra'ūf). His best-known work, *'Umdat al-muḥtādjīn ilā sulūk maslak al-mufradīn*, is a textbook of practical mysticism giving detailed information about the methods of *dhikr* and containing litanies (*rawātib*), formulas to be used, instruction on how to control breathing, etc., illustrated with figures, *daerahs*, to explain certain mystical truths. 'Abd al-Ra'ūf, too, was a prolific writer. Mention should be made here of his translation of parts of the Ḳur'ān commentary of al-Bayḍāwī, which, in editions printed in Egypt, is still used in Sumatra and Malaya today. For further titles we refer to Voorhoeve's article listed in the Bibliography.

Besides works on mysticism as mentioned above, there exists a great mass of orthodox literature which can only be mentioned here. Widely read was, *e.g.*, *Bidāyat al-hidāya*, a work of al-Ghazālī translated into Malay with additions of his own by 'Abd al-Ṣamad al-Palimbānī, who also edited the fourth book of al-Ghazālī's *Iḥyā' 'ulūm al-dīn* in Malay under the title of *Sayr al-sālikīn ilā 'ibādat Rabb al-'ālamīn*. Both works were written by 'Abd al-Ṣamad while he was in Arabia. Of the numerous catechisms, mention may be made of the popular *Masā'il al-muhtadī li ikhwān al-mubtadī*, of which there are a great many manuscripts and which, moreover, was printed several times.

Closely related to religious literature are the so-called *risalats* and *wasiats* (from Arabic *waṣiyya*) which appeared from time to time in the wake of disturbances or catastrophic events like floods and

earthquakes. The purpose of these writings was to admonish people to atone for their sins and to return to a pious life. The form as a rule is traditional, the author relating how the prophet appeared to him in a dream and ordered him to convey such and such a message to his, *i.e.*, Muḥammad's community.

Finally, mention must be made of two genres which are a good illustration of certain aspects of Indonesian popular Islam and popular beliefs, namely the *kitāb ṭibb* and the tales about saints and founders of *tarikats*. The *kitāb ṭibb* do indeed contain medical prescriptions, but on the other hand they have a markedly magic character because recitation of prayers (*duʿāʾ*) or incantations and formulas, among them verses of the Ḳurʾān, for a certain number of times are considered an important expedient for curing illnesses. Another means of healing is, *e.g.*, by making various calculations based upon the numerical value of the Arabic letters of the name of the patient. The tales about prominent religious teachers and saintly persons of bygone times and of founders of *tarikats* are not strictly biographies but rather stories in which all kinds of miraculous deeds performed by the main characters are related. The miracles stand as proofs of the sanctity of their performers. These tales, legends of the saints, are composed for edifying purposes. Examples are *Hikajat Sjaich Abd al-Kadir al-Djilani* (Ar. S̲h̲ayk̲h̲ ʿAbd al-Ḳādir al-D̲j̲īlānī) and *Hikajat Sjaich Muhammad Samman.*

As for belles-lettres, in the first place mention must be made of two important texts, both written for Achehnese Sultans in the first half of the 11th/17th century. The first is *Tād̲j̲ al-salāṭīn*, about whose author, named Buk̲h̲ārī D̲j̲ohorī (or D̲j̲awharī), nothing is known. This text, a Mirror for Princes, was written in 1012/1603, without a doubt after Persian originals. The second is the *Bustān al-salāṭīn* of al-Rānīrī, dated 1047/1638, an encyclopaedic work and a compendium of Islamic knowledge with a special chapter on the history of the Achehnese Sultanate and the genealogy of its Sultans. Besides these, there are a great number of romances, both in prose and in poetry. These works, mostly dating from a later period, namely from the 12th/18th century and in particular from the 13th/19th century, are very loosely connected with Islam, only the motifs and the subject matter being derived from international Islamic literature, their surroundings being set in the central lands of Islam. A few titles may suffice: (poetry) *Sjair Tadj al-muluk, Sjair Sitti Zubaidah, Sjair hikajat Radja Damsjik*, and (prose) *Hikajat Komala Bahrain, Hikajat Shahi Mardan* (= *Hikajat Bikrama Ditja Djaja*), *Hikajat Ahmad Muhammad, Hikajat Djauhar Manikam, Hikajat Abd al-Rahman dan Abd al-Rahim, Hikajat Radja Damsjik, Hikajat Tawaddud*, and many others.

Of the literatures of Achehnese, Macassarese and Buginese (Macassarese and Buginese have, like Javanese, been able to maintain their original scripts), the same can be said as has been said of Malay literature, although the Islamic literature in these languages is more restricted so far as numbers of titles is concerned; but on the other hand, in addition to the works in these languages, there was a wide circulation of works in Malay. For details the reader is referred to the catalogues listed in the Bibliography.

As regards Javanese literature, here too we find essentially the same pattern as in Malay literature: textbooks of Arabic, translations and commentaries of the Ḳurʾān, works dealing with the sacred history of Islam, tales of Muḥammad and the prophets before him, of the heroes of Islam, and so on. The majority of these works consist of translations from Malay, and are, like their Malay originals, anonymous. One characteristic of the Javanese translations and reworkings is that they have been expanded and as a rule, in accordance with Javanese literary taste, have been versified. The story of Ḥamza has here grown into a voluminous and very popular cycle, the "Mėnak". Special mention, too, must be made of the tale of Yūsuf, which has become extremely popular in Java and Madura. In almost all cases it is written in Javanese script on palm-leaves (*lontar*). A well-known orthodox theologian in Java and author of several works which were widely studied was Ahmad Ripangi (= Rifāʿī) of Kali Salak, Pekalongan.

According to Javanese historical tradition, Islam was introduced in Java in the 9th/15th century by the *walīs*, saintly persons of great spiritual power, usually nine in number. They may be considered as culture heroes; it is believed that they also invented the *wayang*, the Javanese shadow-play, and the *gamelan*, the well-known Javanese musical instrument. These *walīs* preached a heterodox mystical doctrine of the relation between the Creator and the creature and of the unity of being. This doctrine is expressed in anonymous mystical songs, called *suluks*. A very few only of these *suluks* were perhaps written by *walīs*, the majority are of a later date. Some of them are brief songs explaining mystical concepts, sometimes in the form of questions of a student to his teacher, of a son to his father or of a wife to her husband, together with the answers. The language is often cryptic. Some of them are very lyrical—which is exceptional in Javanese literature. Their wide circulation all over Java is apparently due to wandering students travelling from one *kiahi* (spiritual leader) to another. The voluminous romanticized cycles of tales like *Tjabolang, Tjentini* and *Djatiswara* are likely to have developed round *suluks* of the same name. They are conceived as travel stories in which the main characters travel about in search of each other; in places of rest, often the homes of famous spiritual teachers (*kiahis*), discussions are held on almost any subject, ranging from the most trivial to the loftiest, among which figure very profound religious and philosophical speculations.

The Arabic script failed to supersede the Javanese script, although specifically religious works were written in Javanese in an (adapted) Arabic script, the so-called *pėgon.*

Besides the indigenous literatures, there existed a vast literature in Arabic imported from abroad. This Arabic literature is represented in a great number of manuscripts. The Museum Pusat (formerly the Museum of the Batavia Society of Arts and Sciences) in Jakarta is one of the libraries which possess a large collection of these texts. Other manuscripts of this kind are preserved in the Leiden University Library, mainly derived from the collection of Professor Snouck Hurgronje. The following categories can be distinguished: Ḳurʾān, *ḥadīt̲h̲*, theology, law, sacred history of Islam and biographies, philology, and (although very few in number only) poetry and tales. For details the reader is referred to the catalogues.

Modern developments in Islam have left practically no visible traces in Indonesian and Malay literature. It is a secular literature although there are, of course, such authors as Hamka (Hadji Abdul Malik Karim Amrullah), an Indonesian writer of Sumatran origin, who bear a markedly Islamic stamp.

Bibliography: General works: C. Snouck Hurgronje, *The Achehnese*, 2 vols., Leiden 1906, in particular vol. ii, ch. 2; idem, *Brieven van een wedono-pensioen*, in *Verspreide Geschriften*, Bonn and Leipzig 1924, iv/I, 111-248; R. O. Winstedt, *A history of Malay literature, with a chapter on modern developments by Zaba* (Zain al-Abidin bin Ahmad), in *JMBRAS*, xvii (1940); reprinted as *A history of classical Malay literature* (without Zaba's contribution) in the same *Journal*, xxxi (1958); A. Teeuw, *Modern Indonesian literature*, The Hague 1967.

INGUSH, a Muslim people belonging to the central group (*veynakh*) of the Ibero-caucasian linguistic family of the northern Caucasus. Čečen, Batzbi and Kistin are languages belonging to the same group.

The name Ingush comes from the *Aul Angush*, founded in the foot-hills of the Caucasus in the 17th century. The term was first used by the Kabards [*q.v.*], then by the Russians. The indigenous name is *Galgay*, which is the name of one of the most important Ingush tribes, or *Lamur* (= "Mountaineers").

The Ingush live in the western districts of the present-day Čečeno-Ingush Autonomous Republic, mainly in the upper and intermediate valleys of the Terek and the Sunja and their tributaries, between the Čečens [*q.v.*] to the east and the Kabards to the west.

Very little is known of the history of the Ingush tribes before the 18th century. They had been subdued in the 11th century by the rulers of Georgia, from whom they received Christianity. At the beginning of the 15th century the Ingush were paying tribute to the Kabards. Sunnī Islam only penetrated the country in the second half of the 18th century as a result of the activities of the Čečen Naḳshabandīs and did not triumph until the beginning of the 19th. Christian Ingush were still to be found in 1865 (3,405 as compared with 11,960 Muslims according to Semenov, *Geografičeskiy i Statističeskiy Slovar Rossiyskoy Imperii*, St. Petersburg 1865, ii). It was also at the beginning of the 18th century that the Ingush began their slow migration from the high lands to the more fertile plains of the Terek and the Sunja. This movement continued during the first half of the 19th century.

Unlike their Čečen neighbours, the Ingu<u>sh</u> offered little resistance to the advance of the Russians whose first detachments entered their country about 1770. On the contrary, they even helped them against the Kabards and took no part in the revolt of the Čečen *<u>sh</u>ay<u>kh</u>*, Manṣūr U<u>sh</u>urma [*q.v.*], nor in the great movement of the Imām <u>Sh</u>amīl [*q.v.*].

After 1850, the Russian presence in the lands of the Ingu<u>sh</u> was not characterized by indigenous revolts, as it was in Dā<u>gh</u>istān and the lands of the Čečen, and it was only in the second half of the 19th century that relations between the Ingu<u>sh</u> and the Russians became noticeably worse. The conflict began about 1860 when the Ingu<u>sh</u> settlements around Nazran on the Sunja were pushed back by the Cossacks towards the infertile lands of the high mountain. At the end of the 19th century and the beginning of the 20th the political climate deteriorated rapidly when the lands of the Ingu<u>sh</u> were again disturbed by severe troubles between the Ingu<u>sh</u> and the Terek Cossacks.

Until the Revolution, the Ingu<u>sh</u>, like their neighbours, the Čečens, maintained a pre-feudal social structure. All the Ingu<u>sh</u> clans considered themselves as free and equal and were grouped in "free societies" (the most important were the Galgay, <u>D</u>jerak Kistin and Gala<u>sh</u>). The large, undivided family was preserved almost everywhere, and patriarchal customs (levirate, polygamy etc.) were faithfully observed. Ingu<u>sh</u> society was not divided into classes; there was no aristocracy, although an élite, made up especially of officers and public officials, had begun to form at the beginning of the 20th century.

During the October Revolution the Ingu<u>sh</u> played a part in the confused struggles which involved the northern Caucasus in great bloodshed between 1918 and 1921. Because of their enmity towards the Terek Cossacks who had driven them out of the rich lands of the caucasian foot-hills, the Ingu<u>sh</u> supported the Bolshevik forces.

On 7 July 1924 the Autonomous Region of the Ingu<u>sh</u> was founded with an area of 3,200 sq. km. and a total population of 81,900. (At this time the Ingu<u>sh</u> numbered 75,200). On 15th January 1934 the Region was united with that of the Čečen to form the Čečeno-Ingu<u>sh</u> Autonomous Region which became the Čečeno-Ingu<u>sh</u> Soviet Socialist Republic on 5 December 1936.

In 1943 the advance guard of the German armies reached the western districts of the Ingu<u>sh</u> lands. In 1944 when the region was reoccupied by the Soviet Army, the entire Ingu<u>sh</u> population was accused of "treason against the Soviet fatherland" and "collaboration with the Germans" and was deported to Central Asia (at the same time as the Čečens, the Balkars, the Karačays, the Kalmuks and the Crimean Tatars), their national republic being suppressed. In 1957 this measure was recognized as an error arising from the "cult of personality" and the Ingu<u>sh</u> were officially rehabilitated and allowed to return to their re-established republic. In 1959 they numbered 106,000 (as against 92,000 in 1939), but their birth rate is one of the highest in the Soviet Union.

In 1959 the Čečeno-Ingu<u>sh</u> Autonomous Republic had a total population of 710,000, of whom 292,000, *i.e.*, 41%, were Muslims. Of this number only some 48,000 were Ingu<u>sh</u>.

The Ingu<u>sh</u> language was given a Latin alphabet in 1923; in the same year there appeared the first periodical in Ingu<u>sh</u>, *Serdalo* ("The Lamp"). In 1938 the Latin alphabet was replaced by the Cyrillic.

Bibliography: All the works dealing with the Ingu<u>sh</u> are in Russian. Among the chief ones are: B. Dolgat, *Materiali po običnomu pravu Ingu<u>sh</u>ey*, Vladikavkaz 1930; N. F. Grabovskiy, *Ingu<u>sh</u>i-I<u>kh</u>žizh' i običay*, in *Sbornik Svedenii o Kavkazkikh Gor<u>ts</u>a<u>kh</u>*, ix, Tiflis 1876; *Narodi Kavkaza*, i, (*Narodi Mira* series), Moscow, Ac. of Sciences, Inst. of Ethnography, 1960, 375-91; I. I. Pantukov, *Ingu<u>sh</u>i*, Tiflis, Kavkaskoe Otdelenie Russkogo Geografičeskogo Obshčestva, xiii/6, 1900; G. Vertenov, *Ingu<u>sh</u>i Istoričesko-Statističeskiy očerk*, in *Terskiy Sbornik*, ii, Vladikavkaz. See also the bibliography of ČEČEN.

INḪISĀR [see RÉGIE].

INK [see MIDĀD].

INKĀR, "denial", the opposite of *iḳrār* [*q.v.*]; it is said that there is *inkār* when a person who is summoned by law to acknowledge a debt denies that he owes it; this *inkār* should not be confused with the refusal (*radd* or *tak<u>dh</u>īb*) of the beneficiary of an *iḳrār* to agree to the said acknowledgement [see IḲRĀR].

Faced with a debtor who refuses to recognize his debt or his obligation, the petitioner has the right to use any of the methods of proof which the law allows him and, in particular, can make him swear an oath, *yamīn al-munkir*, which many Muslims in former times preferred to avoid pronouncing, even though they did not admit to being debtors. There could then take place a transaction which put an end to the legal conflict, usually irrevocably, and this was called *ṣulḥ ʿalā inkār*.

Bibliography: The books of *fiḳh* in the chapter on judical *iḳrār*. Santillana, *Istituzioni di diritto musulmano*, Rome 1938, ii, 576, 625.

INNOVATION [see BIDʿA].

INÖNÜ [see SULṬĀN ÖNÜ].

INṢĀF, equity. According to the *LA*, this *maṣdar* of the fourth form has as synonym *naṣaf*, *naṣafa*, and implies the idea of "to grant rights" (*iʿṭā al-ḥaḳḳ*); it is stated there that *anṣafa* is to "assure to others the same right that one claims for one's self". The idea thus presented therefore corresponds strictly to equity, but it is not clear at what date this notion began to be rendered by *inṣāf*. Although *naṣaf* is attested in early poetry, *inṣāf* does not seem to appear in the so-called pre-Islamic *dīwān*s; nevertheless there is to be found, in the anthologists of the 3rd/9th century, the expression *a<u>sh</u>ʿār munṣifa* (or *a<u>sh</u>ʿār al-naṣaf*, *al-inṣāf*), to indicate, if not a poetic genre, at least a theme which first appears among a certain number of poets of the end of the <u>D</u>jāhiliyya and of the very early years of Islam; in the verses thus described (which are most frequently in the *wāfir* metre and contain often-repeated clichés), the poets praise the fervour and the valour in war of the rival clan and acknowledge that victory has been hard-won; these poems are thus a means of glorifying oneself without humiliating one's adversaries. It is this contrast with the themes of the traditional *hi<u>dj</u>āʾ* [*q.v.*] which attracted the attention of the anthologists (Ibn Sallām, Abū Tammām, al-Buḥturī and others) and led them to adopt the epithet of *munṣifa* (see Ch. Pellat, *Sur l'expression arabe* ašʿār m.n.s.fa/fāt, *Mél. Marcel Cohen*, 1970, 211-9).

The term *inṣāf* does not appear in the Ḳurʾān, where the root *ḳsṭ* is used in referring to equity, but it enlivens the meaning by its frequent and lavish use of roots which are conceptually either

close to it or opposed to it, such as *ʿdw*, *ẓulm*, *ʿadl*, *ṣlḥ*, *ḥsn*. The principle of *istiḥsān*, retained in particular by the Ḥanafīs, may be considered as a continuation of the Ḳurʾānic idea and terminology: it expresses, in fact, a more flexible and more circumstantial conception and practice of the over-rigid justice produced by the formal strictness of *ḳiyās*. In introducing concrete considerations, of time, of practice and of persons, *istiḥsān* allows the adoption of solutions which tend towards equity. "*Istiḥsān*", writes Ch. Chehata (*Études de philosophie musulmane du droit*, in *St. Isl.*, xxv, 138), "may be considered as the form which the idea of equity has taken in the mind of the Muslim jurisconsults. *Benignitas* (*Istiḥsān*) is a very human aspect of the principle *jus est ars aequi et boni*. It belongs on the borderline between law and morals".

It is difficult to state precisely what this aspect of juridical thought owes to indirect influence (*e.g.*, to *ḥilm* as indulgence, *i.e.*, a higher form of justice, to Byzantine practice, to Medinan and ʿIrāḳī *ʿurf* etc.) and to direct influence. What is certain is that the *Nichomachean ethics* contain a penetrating discussion of equity (*épreikéia*) at the end of book V on justice (*dikè*). Aristotle's thought stems from a very early tradition which opposed the unwritten law to the written law, which is too general to solve with equity all the individual cases. It is thus one finds here a very clear defence of equity as being the source of a higher law.

The *falāsifa* naturally took up this idea in order to praise its moral beauty. "The virtue of justice (*ʿadāla*)", writes, for example, Miskawayh (*Tahḏẖīb al-Akhlāḳ*, ed. Zurayk, 18), "confers on man a disposition (*hayʾa*) which causes him to choose always to treat first himself with equity, then to treat others with the same equity (*inṣāf*/*intiṣāf*) which he expects from them".

The rationalization of this idea is pursued in the writings of the scholars, and *inṣāf* finally came to mean impartiality, objectivity, integrity, in short a complete ethical code for the activity of the man of learning (*dhu 'l-ʿilm*), which al-Māwardī, for example, describes at length under the name of "integrity of the soul" (*Ṣiyānat al-nafs*, in *Adab al-dunyā wa'l-dīn*, ed. Saqqa, 30 f. and *passim*). The importance of this ethical code explains the attraction for writers of titles like *Kitāb al-Inṣāf* or *Kitāb al-Inṣāf wa-l-intiṣāf* (16 of them are to be found in Brockelmann).

Finally it may be mentioned that *inṣāf* is a method of argument in which, instead of immediately asserting the inferiority or error of that which is being attacked in comparison with that being defended, both are placed on a fictitious equal footing although it is granted that one or the other is inferior or wrong. In this way impartiality is displayed while one of the alternative propositions is implicitly considered as impossible or absurd. The model for this figure is provided by Ḳurʾān XXXIV, 23/24: "Either you or I are on the right path or in manifest error" (M. Canard, *Akhbâr Ar-Râdî billâh* ..., Algiers 1946, i, 67, n. 3; see also the commentaries on this verse where two lines of Ḥassān b. Thābit (*wāfir* metre, ... āʾū rhyme) are cited on this subject, lines 24-5 of the first piece of the *Dīwān* with the explanations of the editors).

Bibliography: In addition to the works mentioned in the article: R. A. Gauthier and J. Y. Jolif, *Aristote, Éthique à Nichomaque*, ii, 1, 431-2. (M. Arkoun)

INSĀN (A.), man (*homo*). The Ḳurʾān states that God created man weak (IV, 28). Several verses describe his psychology: in trouble he cries to God, and when the trouble has passed, he forgets (X, 12; XXXIX, 8 and 49); he is very unjust (*ẓalūm*, XIV, 34; XXXIII, 72); much inclined to be precipitate (*ʿadjūl*, XVII, 11); versatile (*halūʿ*, LXX, 19); rebellious (XLVI, 6); a subtle reasoner and given to argument (XVIII, 54, XXXVI, 77).

The *LA* echoes this Ḳurʾānic teaching: all beings who are endowed with intelligence, angels and djinns, are given to argument, but man is more so than the others; on the other hand, it quotes a fantastic etymology, from Ibn ʿAbbās: "man is called *insān* because he receives the alliance of God and then forgets (*fa nasiya*)"; the *aṣl* of this word is said to be *insiyān*, the *ifʿilān* form of *nisyān*.

On the physical reality of man, there are many verses in the Ḳurʾān. God created him "of a clay of mud moulded" (XV, 26). In particular in XXIII, 12 ff. there is a detailed account of the development of the foetus: the primary matter of the human body is clay; then there is successively the *nuṭfa* which fixes itself in the uterus, the *ʿalaḳa*, the *mudgha*; then the differentiation of the tissues: bone and flesh; and finally there occurs a "second creation", which corresponds, according to the commentators, to the various phases of development from birth to death. Fakhr al-Dīn al-Rāzī gives an Aristotelian interpretation to these passages: "Man is engendered from a flow of sperm; the sperm is engendered by an excess of the fourth type of coction (*min faḍl al-haḍm al-rābiʿ*, cf. the πέψις, that is the digestion, *Meteorologica*, book iv, 379512; *De Gen. Animal.* 724a 9 f.). But all this is engendered only by foods, which are animal or vegetable substances. But the animal substances are reduced to vegetable substances, which themselves are engendered from the clarified juices of the earth and of water. Thus man is in reality engendered from a pure extract of clay (*min salāla min ṭīn*, cf. XXIII, 12). Next this pure extract, after passing successively through various stages (*aṭwār*, cf. LXXI, 14) of formation and through the circuits of elaboration, becomes semen". The explanation of "We have made him to grow in a second creation" is: "God made man into a living being when he was lifeless matter; made him to speak when he was dumb; to hear when he was deaf; to see when he was blind. God has placed in him, within and without, in all his limbs and all his organs, a wondrous nature and admirable wisdom, for which no description is adequate".

The Ḳurʾān describes man by contradictions: grandeur and wretchedness (cf. XCV, 4-5): "We indeed created Man in the fairest stature/then we restored him the lowest of the low". Al-Rāzī states that the word *takwīn* may refer to the exterior form, to its balanced assembly of parts (some point out that man is the only animal which does not have its face turned towards the ground, *mikabb ʿalā wadjhih*, but which has an upright stance, *madīd al-ḳāma*, and which takes its food with its hand; cf. St. Gregory of Nyssa, "*On the workmanship of man*", in which are developed the same ideas on the relation between the prehensile hand and the reduction of the mouth or the muzzle, leading to a new balance of the head and the ability to walk upright); or to the interior: intelligence, comprehension, culture, eloquence, in their most perfect manifestations. Verse 5 is compared by Ibn ʿAbbās to XVI, 17 (or XXII 5): "And some of you who are kept back unto the vilest stage of life (*ardhal al-ʿumr*)". Thus "the thoughts are troubled; the hearing, the sight and the intelli-

gence begin to fail; strength diminishes and man becomes incapable of performing good works" (al-Rāzī). This double aspect of man appears clearly in sūra II, where the angels comment on God's plan to establish Adam as deputy on earth. This has given rise in the commentary of the *Manār* to an interesting anthropological view which has a certain analogy with some western ideas going back to Herder and developed in Germany during the 19th century. Unlike animals who know by instinct (*ilhām*an) what is useful to them and what is harmful, man acquires knowledge of his surroundings only by very slow degrees. But his progress has no limits, and on this point he is superior even to the angels, whose knowledge and actions are limited (*maḥdūd*). This recalls al-Rāzī's idea that man, unlike the angels and the beings which are inferior to him, has no determined function (*waẓīfa muʿayyana*). Thus man has been able to acquire a knowledge which gives him a considerable power over nature and which continually increases. "He has invented, discovered, innovated, so as to change the shape of the earth (*ḥattā ghayyara shakl al-arḍ*)", we read in the *Manār*. He has cultivated the uncultivated lands; he has grown, through hybridization, species which did not formerly exist, for example the mandarin (*yūsuf efendī*) which "God has created through the hand of man (*khalaḳahu bi-yad al-insān*)". It is in this sense that man, without offending the angels, may truly be the *khalīfa* of God, in spite of all his deficiencies.

It is also from verses of the Ḳurʾān that the *Ikhwān al-Ṣafāʾ* [*q.v.*] had developed, within their system, a whole theory of man, both from the physical and from the moral point of view. "The name of man is applied to this soul which inhabits this body: both together are the two parts of man; he is their total, the union formed of the two together. But one of the two parts, the soul, is the more noble; it is like the pulp, and the other, the body is like the rind (cf. Ibn Masarra and the pseudo-Empedocles) ... The soul is like the tree, the body like the fruit" (Epistle 22, ii, 319 f., Cairo 1928). In fact, the function of the soul is to give to the body its achievement (*tamām*) and in doing this it reaches its perfection (*kamāl*). The body is for the soul also like the workshop for the craftsman. It is compared to a town; the tribes and the different populations of the various quarters are like the natural faculties of the soul: vegetative, animal, rational, three derivations from one single essence. Man is a microcosm, a well-controlled city (*madīna fāḍila*), whose king is the soul.

Next the Epistle deals with the development of the human embryo according to the months and the astral influences. In the first month, under the action of Saturn, whose property is to cause form to take shape in matter, the *nuʿfa* is placed in the matrix. In the second month, under the dominant influence of the spiritual forces of Jupiter, heat is engendered in the *ʿalaḳa* and produces in it the balance of the humours. In the third month, under the influence of Mars, the *ʿalaḳa*, moved more vigorously, receives an excess of heat which transforms it into *muḍgha*. In the fourth month, it is the sun which guides the development: its spiritual forces exert a major influence on the *muḍgha*; the vital powers breathe on it and it receives the animal soul. In the fifth month, under the influence of Venus, the structuring of the body (*khalḳa*) is completed (*istatammat*) and its edifice is perfected (*istakmalat*): the eyes, the nostrils, the mouth and the ears are formed. In the sixth month, new spiritual forces, due to Mercury, cause the embryo to move so that it is now able to move its arms and legs. It can open its mouth and eyelids; it is sometimes asleep and sometimes awake. With the seventh month there begins the influence of the moon: the embryo acquires weight, flesh and fatness, its joints harden and its movements become stronger; it feels confined and attempts to emerge. If this happens, it is born able to survive. But if it remains in the mother's womb until the eighth month, it grows heavier, it comes under the predominant action of cold, it cannot conquer sleep and it has little movement. If the birth takes place then, its growth is slow and its movements heavy, and sometimes it is still-born. This is because it is once again under the influence of Saturn. But in the ninth month, Jupiter begins to dominate again: the temperament becomes balanced, the vital spirit becomes strong and the operations of the animal soul appear in the body. Such is the genesis of the human creature. The *Ikhwān al-Ṣafāʾ* have many further ideas about man, all of them curious and interesting. To take one instance: in the same way that man is a microcosm, he shares all the particular characteristics of the animals (cf. *Ep.* 26, iii, 19 f.). In this system, the stars serve as instruments, not of the Creator, but of the Universal Soul which obeys him. Thus man takes his place in the hierarchy of the universe.

The *falāsifa* studied man mainly in the perspective of the Greek thinking concerning the nature of the soul, its relation with the body and the union of the agent Intellect with the material intellect. "The rational faculty by which man is man is not in its substance an intellect in action ... it is the agent intellect which makes it become an intellect in action ..." (al-Fārābī, *al-Siyāsa al-madaniyya*, Beirut 1964, 35).

Finally, al-Tahānawī, in his dictionary, gives in his article *Insān* a long quotation from the commentary of Fakhr al-Dīn al-Rāzī on sūra XVII, 85: "Say: 'The Spirit is of the bidding of my Lord'". Intuition alone tells us that the spirit is what man means when he says "I". But can this "I" be the organic body when it is well-known that its parts are always changing and being replaced? If man is not this body, is he a body in which the earthly element predominates since this would be made of bone, flesh, fat and sinews, and nobody identifies man with these "thick, heavy and dark" tissues. It cannot be a body in which the aqueous element predominates, since this would be one of the four humours, and none of these is man, except that some consider that an exception should be made for the blood, since the loss of it brings death. Bodies in which there predominate the elements of air and fire are the spirits, bodies composed of air mingled with natural heat (*al-ḥarāra al-gharīziyya*) and engendered in the heart and in the brain. Spirits cannot dissolve or decline. They are noble, celestial and divine bodies, which penetrate into the organism as soon as it is formed and completely prepared to receive them. They remain there so long as the body is in good health, but when there arise thick humours which prevent their circulation (*sarayān*), they leave it, and this is death. This doctrine, says al-Rāzī, "is powerful and sublime, and should be pondered since it corresponds exactly to the statements in the divine books on the states of life and death". In fact God said to the angels: "I am creating a mortal of a clay. When I have shaped him, and breathed My Spirit in him, fall you down, bowing before him" (XXXVIII, 72, cf. XV, 29).

The doctrine of most of the physicians and of those who deny the soul, is based on the observation that each animal species is characterized by its own balanced arrangement of humours. The word "human" is applied to bodies having particular qualities resulting from the mixture of the elements according to an equally particular proportion. The metaphysicists on the other hand say that man is not a body. They teach the doctrine of a "return" (*maʿād*) to God whereas the body dies, and they believe in spiritual sanctions in the after life. Several doctors of Islam have supported these ideas: the author cites Rāghib and al-Ghazālī (?), certain early Muʿtazilīs, a group of Karramiyya, among the Shīʿa al-Shaykh al-Mufīd, and in particular the ascetics and the mystics.

After this long citation, al-Tahānawī embarks upon the question of *al-Insān al-kāmil*.

(R. ARNALDEZ)

AL-INSĀN AL-KĀMIL the Perfect Man.

1). General observations on this concept. The idea of the Perfect Man, which occurs in Muslim esoteric mysticism, is not derived directly from the Ḳurʾān. It may be compared with gnostic conceptions which have assumed various forms: that of the πρῶτος ἄνθρωπος linked with Hermetism (cf. *Poimandres*) and the hellenistic gnoses, might be the purest original source; another origin may be found in the Mazdaean myth of Gayomart, the primordial Man. These two currents come together in Manichaeism with the doctrine of the first Man (*al-insān al-ḳadīm*) who, with the Mother of Life and the five elements, her sons and auxiliaries, constitutes the first Creation which the Father of Greatness raises up by his Word. For the disciples of Zoroaster and for Mani, however, this prototypal man has as his function the combatting of evil and darkness, in conformity with a dualist doctrine which developed in Iranian thinking and which Islam rejected with all its might. Nevertheless the idea of a role, if not of salvation, at least of conservation, assumed by the Perfect Man in regard to the inferior world, remains an essential one for the Muslim mystics who make use of this idea. A comparison with the Jewish Cabala would be even more instructive: from the mystical theory of the *Merkābāh* there has developed, in the *Sepher ha-Zohar*, the doctrine of the ten *sephirōt*, among them being Wisdom (*ḥokhmāh*), Intelligence (*bīnāh*), Love (*ḥesed*), Mercy (*raḥamīm*), Royalty (*malkhūt*), and so on, which constitute the World of Union or transcendental Man. It is through these that divine life is diffused into the entire creation. Thus Jewish mysticism also finally reaches this conception, that the Infinite (*En sōf*), by the emanation of its light, forms the Ādām Qadmōn, from whom the light of the *sephīrōt* produces the total emanation. This kind of refraction of light through light calls to mind the ḳurʾānic expression "Light upon light" (*nūr^un ʿalā nūr^in*), in XXIV, 35. Similarly one sees, in al-Djīlī, for example, that God created the muḥammadan forms (cf. *infra*) from the light of his Name of Creator (*Badīʿ*) and Powerful (*Ḳādir*); then He irradiated (*tadjallā*) on these forms with His Name of Benevolent (*Laṭīf*) and Grantor of Absolution (*Ghāfir*). Here too, there is an irradiation of light in light.

From these similarities must it be concluded that a real influence existed? Might there be a "unity of initiatory origin among all the religious mysticism of ancient Asia"? L. Massignon thinks not. In this matter he sees "coincidental terms, without any real relationship existing between their respective processes of formation" (*Essai*, 57 and n. 5). It seems indeed that there may be reason to observe some parallel developments, in particular between the Jewish Cabala and the Muslim *ʿirfān*. But it is not excluded that independent reflection upon the Ḳurʾān may have led certain mystics to conceptions for which they found elsewhere various expressions and symbols that they could adopt.

2). The ḳurʾānic contributions. The idea of *al-Insān al-kāmil* presupposes that, in the whole of creation, man occupies a leading position, entirely apart. Now the Ḳurʾān adduces many revelations to this effect. First of all there is the affirmation that the universe, the heavens and the earth with all that they contain, are placed in the service of man by the *taskhīr*. The expression *sakhkhara laḳum* (He has caused to labour for you) or *lanā* (for us) occurs about ten times in the Ḳurʾān. Next, there is the choice of man as God's vicar (*khalīfa*) on earth (II, 30), a choice which was to surprise the Angels; then, the proposal put to man to assume responsability for the *amāna* (trusting of faith): he accepts, when the heavens and the earth had refused, through fear (XXXIII, 72). In the commentary of Fakhr al-Dīn al-Rāzī there occurs an observation which gives us an indication of what constituted the Perfect Man for the mystics: among the beings endowed with perception, there are those who perceive both the universal and the particular; these are men. Some others who perceive only the particular are the animals; while those others who perceive only the universal are the Angels. Man has therefore an intermediate position which endows him with a value unique in creation; thus, despite his weakness, he will bear the *amāna*.

But it is the verses referring to the light which are above all important. In two passages (IX, 32 and LXI, 8) it is written that, in transmitting it to men, God gives His light a complete perfection (*yutimma nūrahu*; *mutimm nūrihi*). Al-Rāzī comments: "God promises Muḥammad an increase (*mazīd*) in aid and power, as well as a raising in degree (*iʿlāʾ al-daradja*) and the perfection of the hierarchical rank (*kamāl al-rutba*)". In II, 257, we read—"God is the *walī* of those who believe; He makes them come forth from the darkness to the light". The root *walā* includes the idea of proximity (*ḳurb*); in addition, it implies that God makes Himself the guarantor (*takaffala*) of the well-being of Believers. According to certain commentators, even if God should give this guarantee to all His creatures, He is said to be in a very particular sense the *walī* of the Believer because He has additional favours (*ziyādat al-alṭāf*) for him; or again, because He turns to the advantage of the Believer the favours which He grants to the whole community of creatures; or finally because He loves the Believers (*yuḥibbuhum*), that is to say He loves to exalt them (*yuḥibbu taʿẓīmahum*). Now the light is in one sense faith or Direction (*hudā*); it is also revelation; it is a Book (Torah, Gospel, Ḳurʾān); but it is also that through which the Prophet causes men to pass from darkness into light (XIV, 1).

It is then among Believers, the Friends of God (*awliyāʾ*; cf. the singular *walī*), the prophets and especially Muḥammad, that one must seek the Perfect Man. The celebrated verse 35 of the Surah of Light (XXIV) has been given an important interpretation. A distinction has been made between the opening section which speaks of God as light, and the continuation introduced by *mathalu nūrihi*, apparently referring to the light which He sends to certain of His creatures. For some, the niche (*mishkāt*) is the

heart of the Believer, and the lamp which is found there is the light of the heart. For others, such as al-Kharrāz, the reference is to the heart of Muḥammad and to a light which shines there, lit by a sacred tree which, for al-Kharrāz is Abraham, for some Ṣūfis the inspirations (*ilhāmāt*) of the Angels, for Muḳātil prophecy and mission. These ideas were finally to lead to the doctrine of the Muḥammadan light (*nūr muḥammadī* [*q.v.*].

3. Transposition of an alchemical idea. The symbol of the Perfect Man is connected also with the alchemical conception of man as a microcosm and of the macrocosm as "meganthropos" (*insān kabīr*). According to al-Djurdjānī, in his *Definitions*, the perfect man unites the totality both of the divine (*ilāhiyya*) worlds and of the engendered (*kawniyya*) worlds, universal and particular; he is the Writing which combines the divine Writings and the engendered Writings; indeed, in respect of his mind and intellect, he is an intelligible Book, named *Umm al-Kitāb*; in respect of his heart, he is the Book of the *Lawḥ Maḥfūẓ*; in respect of his soul, he is the Book of the Abolition (*maḥw*) and Establishment (*ithbāt*) of being. The relation of the Prime Intellect to the macrocosm is that of the human Spirit to the body and its faculties: the universal Soul is the heart of the macrocosm, just as the rational soul is the heart of man. Thus the universe is called *al-Insān al-kabīr*. We find these ideas being applied to the matter of the Perfect Man in Ibn ʿArabi (*e.g.*, *Fuṣūṣ al-Ḥikam*, ch. I, *De la Sagesse divine dans le Verbe adamique* trans. Burckhardt, *La Sagesse des Prophètes*, 23 f. and in al-Djīlī, *al-Insān al-kāmil*, ch. 53, *On the Prime Intellect*: "The Science of the prime Intellect and that of the sublime Calamus are one single Light whose relation to man is called the prime Intellect, while its relation to God is called the sublime Calamus. This being the Intellect ascribed to Muḥammad, it is from him that God created the Angel Gabriel in pre-eternity. Thus Muḥammad is a father to Gabriel and a principle for the totality of the World").

4). Ibn ʿArabi. The idea of the Perfect Man is found in Ibn ʿArabī, in the *Fuṣūṣ al-Ḥikam*, as a development of the ḳurʾānic revelation, according to which man is the *khalīfa* of God on earth: at once ephemeral and eternal, it is through his existence that the world was completed. "He is to the world what the stone is to the ring: the stone bears the seal which the king affixes to his treasure-chests". To man is entrusted the divine safeguarding of the World, and the world will not cease to be safeguarded so long as this Perfect Man shall remain there. God first created the whole world like a mirror which has not yet been polished. In order that He might be perfectly manifested in it, it was necessary that by means of divine Order (*amr*) this mirror should be made clear, "and Adam became the very clarity of this mirror and the spirit of this image". Therefore the Prophet says that God created Man in His image, that is to say that Adam is the prototype who synthesizes all the categories of the divine Presence, Essence (*dhāt*), attributes (*ṣifāt*) and actions (*afʿāl*) (cf. *La Sagesse des Prophètes*, 20, 22, 154 and 54, n. 1). The image of God is no other than His Presence, "so that, in this noble epitome which is the Perfect Man, God manifested ... all the divine Names and the essential Realities (*ḥaḳāʾiḳ*) of all that exists outside Himself, in the macrocosm, in detailed fashion ... From the Perfect Man He made the spirit of the world, and subjected the high and the low to him. Just as there is nothing in the world which does not exalt God by praise of Him (XVII, 44), so there is nothing in the world which does not serve this man ...". Here Ibn ʿArabī recalls the *taskhīr*, and he concludes: "Everything the world contains is subject to man. This is known to him who knows, that is to say the Perfect Man, and is not known by him who does not know, that is to say man the animal" (p. 154).

5). The Muḥammadan Reality (*Ḥaḳīḳa muḥammadiyya*). Ibn ʿArabī writes in his *Futūḥāt* (i, ch. 6): "God existed, and with Him there was nothing which would later add itself to Him ... From the act by which He gave existence to the world, no attribute passed to Him which He had not previously possessed. Before creating, he was described and designated by the Names with which the created beings invoke Him. When He willed the existence of the world and its establishment in accordance with the determinations of which He was aware through the knowledge which He had from Himself, from this entirely pure will there was produced a passive element, by a kind of irradiation of Transcendence towards universal Reality: thus there was produced a Reality known as *al-habāʾ* (literally a cloud of atoms, cf. lvi, 6) ... Then He irradiated with His Light towards this cloud, which the scholars call universal matter, and in which the whole world is in being". Here Ibn ʿArabī quotes the verse of the Light (XXIV, 35). "Now there is nothing, in this cloud, which is nearer to Him, in relation to the capacity for receiving this Light, than the Reality of Muḥammad, called Intellect. Thus he was the leader (*sayyid*) of the World and the first manifestation of existence. His existence is made from this divine Light, from the Cloud and universal Reality. In the Cloud his essence exists, and the essence of the world springs from its irradiation. Those nearest to him, among men, are ʿAlī b. Abī Ṭālib and the being intimate with all the prophets (*asrār al-anbiyāʾ*)". Thus the Perfect Man, the archetype of the universe and humanity, is not Adam but Muḥammad: "Now Muḥammad was the first symbol of his Lord, for he had received the universal words which are the content of the names which God taught to Adam" (*La Sagesse des Prophètes*, 182). It is therefore in him and through him that Adam, and also the other prophets and the "saints" (*awliyāʾ*), find their perfection. For, as al-Djīlī went on to show, there are ectypal perfect men who are more or less perfect and who appear in actual fact in history. As for the interpretation of the verse on the teaching of the names to Adam (II, 31), in support of a total pre-eminence of Muḥammad over men and angels, this takes its inspiration from the idea of creation by the Names, another expression for creation by Light, the Names being themselves luminous.

6). *Al-Insān al-Kāmil* of ʿAbd al-Karīm al-Djīlī. The Perfect Man, his nature and his place in the divine epiphanies as a whole, are studied in detail in the work of al-Djīlī. The theses expounded by Ibn ʿArabī are here repeated: "Know that the Word of the God of Truth constitutes the very essences of the possible; everything possible is one of the sayings of the Word of God; thus the possible is inexhaustible, just as it is said (XVIII, 109): "If the sea were of ink to trace the words of my Lord, the sea would be exhausted before the word of my Lord were exhausted ...". Indeed, the Word, considered in its entirety, is a form for the ideas which are in the knowledge of him who speaks and wishes to express them publicly (*ibrāz*). And so, among other denominations, beings are "sublime letters", as Ibn

ʿArabī says: "We were sublime letters which were not read". In order to read them, just as to speak, there must be a will which sets in motion and a breath (*nafas*) which animates. God has willed that letters should be made to pass, from the invisible world of the *ghayb* to the visible world of the *shahāda*. But He has especially spelled out Man by a breath from His own Spirit (XXXII, 9). The same observation occurs in Ibn Kaḍīb al-Bārī in his *Mawāḳif al-Ilāhiyya*. From this starting-point, al-Djīlī writes: "Glory to Him who has made man a copy of Himself (*nuskha*); if you looked into yourself, you would find for each of His attributes a copy in yourself" (i, ch. 20).

"The Perfect Man is the pole (*ḳuṭb*) around which the spheres of existence turn, from the first to the last". Ibn Kaḍīb al-Bārī says that man is the point of the sphere which serves as a pivot (*madār*) for existence. The Perfect Man is unique in all eternity. But he appears in different guises (*malābis*) and receives various names. His name in principle is Muḥammad, his *kunya* Abū 'l-Ḳāsim, his attribute ʿAbd Allāh, his *laḳab* Shams al-Dīn. His other names vary with each epoch, in harmony with the "guise" of that epoch. But all are united in Muḥammad. Spiritual men are in the image of Muḥammad (*al-ṣūra al-Muḥammadiyya*), which refers to the muḥammadan Reality, and one sees Muḥammad in such images. There is no metempsychosis (*tanāsukh*) there, but merely the irradiation (*tadjallī*) of the Muḥammadan Reality in each era upon the most perfect of men, who thus become the representatives (*khulafā᾽*) of the Prophet on the plane of manifestation (*ẓāhir*), while the Muḥammadan Reality is the hidden side (*bāṭin*) of their own reality.

The Perfect Man, in himself, is that which corresponds (*muḳābil*) to the totality of the Real. Al-Djīlī enumerates all these correspondences (ch. 60). As in God all opposites co-exist, so in the correspondences one discovers the same antitheses. In the Perfect Man the aspects of the *ḥaḳḳ* and the *khalḳ* are combined; he is the mirror of the Name of God (*Allāh*) and he corresponds to all the Names and Attributes; to Ipseity (*huwiyya*), to Egoity (*aniyya*). Thus God has entrusted him with the *amāna* (XXXIII, 72). All the epiphanies of the essence (*dhāt*) of the God of Truth (*Ḥaḳḳ*), from the *Ulūhiyya* (the being-Allah) and the *Aḥadiyya* (absolute Unicity) to the *Wāḥidiyya* (the Unity of the multiple), the *Raḥmāniyya* (virtue of mercy, which extends to all individuals and supports them in their being) and the *Rubūbiyya* (the Lordship which directs them), recur in the "copy", that is to say the *Insān kāmil*. This recalls the theory of the divine Powers, of the Man of God, and of the *Logos* in Philo of Alexandria, and is also close to the theory of the *Sephīrōt* in the *Zohar*.

As for the Perfect Man, regarded not as the prototype but as the believer, the "saint" or individual prophet who is to be "clad" in the Muḥammadan Reality, he passes through three intermediate zones (*barāzikh*): the first, the initial stage, the actual knowledge of the Names and Attributes; the second, the middle stage, is that of the touch-stone (*maḥaḳḳ*) which proves the spiritual relations of man with God (*raḳā᾽iḳ insāniyya*) by the divine Realities; the third is the knowledge of the diversification of Wisdom in the creation of that which is the subject of the divine Decree. After that, there is the Seal (*khitām*, LXXXIII, 26), then the final term, the Majesty of Greatness (*kibriyā᾽*, XLV, 37), which is infinite.

7). Conclusion. There are more concise definitions of the Perfect Man, for example in al-Ḳūnawī: "The fortieth degree of existence is the Perfect Man. It is with him that the degrees reach their completion, that the world is perfected and the God of Truth manifests Himself to the world by the most perfect manifestation". In his *Iṣṭilāḥāt*, al-Tahānawī records that the *Kitāb al-Fulūk* contains this passage:—"The Perfect Man is the isthmus (*barzakh*) between necessity (*wudjūb*) and possibility (*imkān*), the mirror which combines the attributes of eternity and its laws with the attributes of the generation of beings (*ḥidthān*). He is the central point between the *Ḥaḳḳ* and the *Khalḳ*. Through him and through his hierarchical rank (*martaba*), the emanation((*fayḍ*) of the *Ḥaḳḳ* and the presence (*madad*), the source of subsistence((*baḳā᾽*) of that which is not God, make their way to the entire world, the upper and the lower. Without him and without his quality of *barzakh* (*barzakhiyya*) which does not cut itself off in either of the two extremes, nothing in the world would receive the divine presence of the Unique, for lack of relationship and link". Al-Tahānawī notes that the same things are found in the *Sharḥ al-Fuṣūṣ* of ʿAbd al-Raḥmān al-Djāmī. Finally, he makes an observation which well emphasises the exceptional situation of the man neither within nor outside the world, neither united with it or separated from it. "His connection with the world is that of a hegemony (*tadbīr*) and of a free disposition (*taṣarruf*)".

(R. ARNALDEZ)

INSCRIPTIONS [see KITĀBĀT].

INSHĀ᾽ (INSHĀ), strictly "construction", "style" or "composition", *i.e.*, of letters, documents or state papers; then used elliptically for *ʿilm al-inshā᾽* (as, *e.g.*, in *mabādī al-inshā᾽*) or even as a synonym for *munsha᾽āt*, "documents composed according to the rules of *inshā᾽*"; finally also to designate a form of literature, popular and widespread in the area of the Islamic cultural languages (*i.e.*, Arabic, Persian and Turkish), in which were included what in the West would be counted under the heading of style-books for chancery scribes, copy-books and letter manuals. Thus *inshā᾽* literature offers important material not only for epistolography and diplomatic, but also for the literary history of the Islamic world, especially since it often includes models from the pens of prominent letter-writers, poets or statesmen. This literature comprises works of various types. Some are limited to the collection of precepts for writers of letters and documents, *i.e.*, for the chancery scribes (*kātib* [*al-sirr*], *munshī᾽*), whilst others contain collections of model letters of every type, private and public, and especially materials originating from the chancery, *i.e.*, documents, diplomas and state papers. Some works include only one or the other—either precepts for scribes, including stylistic directions, or simply models of style—but those in which both elements are represented are numerous.

The themes of private correspondence to be found in *inshā᾽*-works are those of eulogy, congratulation, condolence, gratitude, remembrance, etc. They are addressed to members of the family, friends or acquaintances. The various kinds of documents and State papers are dealt with in the article DIPLOMATIC.

Copies of documents actually drawn up and issued are often offered as examples of style; but fabricated texts, to which however a certain relative value may be assigned, are also occasionally used. Since both authentic and fabricated examples of style are produced at random and without any distinguishing

indication, careful verification is needed in each case as to whether a given text is authentic or not. Special care is required if the compiler of an *in<u>sh</u>āʾ* work wishes to show the documents of bygone times, for example documents or state papers of an earlier ruler or some other prominent personality. In this case fabricated texts could be inserted all too easily, when, though authentic examples were lacking, the compiler wished to show how documents of such a kind might have appeared. This need not imply an intent to mislead, since the compiler was guided by subjective or in any case literary motives, not usually by historical and much less juristic purposes. Fabricated texts, however, cannot be ruled out, even if the author of an *in<u>sh</u>āʾ* work cites, as often happens, documents which he himself has composed, possibly in his capacity as an important chancery official. These may only be drafts which were no doubt submitted but were not ratified; yet they seemed to the author worthy of inclusion on stylistic grounds. Care is also called for with regard to formularies, since it is not always possible to establish whether they have been taken from genuine documents drawn up according to the rules but omitting specific details such as the address, date, place of issue, etc., or whether they have been freely invented.

The lack or scarcity of historically relevant original documents from certain periods of Islamic history has attracted the interest of historical research to *in<u>sh</u>āʾ* literature, in the search for substitutes for lost or destroyed originals, and with good reason, since, given the non-historical motives of their compilers, most of the *in<u>sh</u>āʾ* works—apart from the special cases just mentioned—are not *a limine* suspect of spuriousness or intent to mislead. For this reason our knowledge of *in<u>sh</u>āʾ* literature has improved considerably over the last decades with regard both to the content and to the form of individual works or whole groups of works. On account of the almost exclusively historical interest of the researchers, little or nothing has been said from the point of view of style, aesthetics or literary criticism. Then too questions about the origin and early development of *in<u>sh</u>āʾ*, questions important in several respects, have been so little investigated that what we are offered on these topics still consists largely of guesswork.

It seems probable that already in the time of Muḥammad the people of Mecca made use of Arabic written documents in their diplomatic and commercial transactions. That specific rules were already in use and held good for such purposes may be seen also in the conduct of the Meccan delegation to Ḥudaybiya for the *bayʿat al-riḍwān*: against Muḥammad's desire to use the *basmala*, they insisted on the customary formulary already in use. We do not know, however, whether there were already tabulations of those rules or even collections of formulae which might be regarded as the precursors of the later *in<u>sh</u>āʾ* literature. For the time being literature of this type can be traced back only as far as the end of the Umayyad period. Although this literature is without doubt Arabic in origin, yet the influence of Persian and Byzantine models is to be taken into account, as can be seen in the character of the letters and documents themselves. In any case it must always be remembered that, after the Arab conquests in Persia and Mesopotamia, the Sāsānid chancery and its personnel was taken over by the new rulers, as was the Byzantine chancery and its personnel in Egypt. Furthermore, in each case many years elapsed before the process of Arabization was complete, bringing with it the exclusive use of the Arabic language and Arab personnel in the chancery.

As yet we do not know when the term *in<u>sh</u>āʾ* came into use. It appears already in Ḳudāma, hence around 288/900, in his *Kitāb al-<u>Kh</u>arād<u>j</u> wa-ṣanʿat al-kitāba, passim*. It was used officially by the Fāṭimids in Egypt, under whom the institution known elsewhere as the *dīwān al-rasāʾil* or *dīwān al-mukātabāt* was called the *dīwān al-in<u>sh</u>āʾ*. The practice commonly known as *in<u>sh</u>āʾ* goes back at least to ʿAbd al-Ḥamīd b. Yaḥyā, the famous secretary of Marwān II, who died *ca.* 133-4/750. He left a large collection of model letters, part of which has survived, as well as his *Risāla ila 'l-kuttāb* (Italian trans. *apud* F. Gabrieli). Even the reputation which ʿAbd al-Ḥamīd enjoyed as a *kātib* illustrates the effect of Persian influence: up to this time the secretaries of the Umayyads had occupied only a humble position, while under the Sāsānids their position had been far superior. Persian influence appears even more clearly in the style of his letters. His *Risāla ila 'l-kuttāb*, it is true, is still composed in simple prose, but in his other writings the use of artificial stylistic methods, for example *sad<u>j</u>ʿ* [*q.v.*], in accordance with Iranian models, is unmistakable. *Sad<u>j</u>ʿ* was to be the basis of the *stylus ornatus*, a characteristic feature of the later *in<u>sh</u>āʾ* literature, but also of various other genres. The presumption of Persian influence is confirmed by Ibn al-Muḳaffaʿ's [*q.v.*] advice to secretaries.

Under the ʿAbbāsids, there took place an unprecedented rise in the position of the chancery secretary in the official hierarchy of the state, a process not unconnected, presumably, with other Persian influences. The elaboration of a body of literature relating to the secretary and his office went hand in hand with this process. Abu 'l-Yusr Ibrāhīm b. Muḥammad al-Mudabbir, appointed vizier *ca.* 264/876, appears as the author of the first handbook for secretaries, entitled *al-Risāla al-ʿad<u>h</u>rāʾ fī mawāzīn al-balāg<u>h</u>a*. The literature of the secretaries (*in<u>sh</u>āʾ*) cannot at this period be clearly distinguished from the *adab al-kātib* literature [see KĀTIB], which is dealt with in the histories of literature and summarized by Björkman, *Staatskanzlei*. It reached high points under the Būyids with Ibn al-ʿAmīd (d. 359/970), but especially in Egypt and particularly under the Fāṭimids, with Ibn al-Ṣayrafī (d. 463/1147), and finally under the Mamluks with Aḥmad Faḍl Allāh al-ʿUmarī's work, *al-Taʿrīf bi 'l-muṣṭalaḥ al-<u>sh</u>arīf*, composed after 741/1340-1, and with al-Ḳalḳa<u>sh</u>andī, whose work *Ṣubḥ al-aʿ<u>sh</u>āʾ fī kitābat al-in<u>sh</u>āʾ*, completed in 815/1412, an encyclopaedia of all the information useful to the scribe, became in practice a handbook for the administration as a whole.

Arabic *in<u>sh</u>āʾ* literature continued to be productive for centuries longer, without, however, attaining any particularly high points. In the nineteenth century it even survived under European influence, as may be seen in works written in French by Arab authors. Before it reached this stage, however, it had had further secondary developments, namely when, with the decline of the power of the Caliph, local dynasties arose, and, as a result, other languages came into official use in the Islamic world alongside Arabic or in its stead. At that time, and especially after the collapse of the Caliphate, *in<u>sh</u>āʾ* literature developed in languages other than Arabic, first in Persian, then in Ottoman Turkish, in Čag<u>h</u>atay, and in Urdu.

Persian was, it is true, used officially in place

of Arabic in the chancery of the Saldjūḳs of Rūm as early as 657/1259. But this seems to have been simply the culmination of a development which had begun very much earlier. We know in fact that from the second half of the 6th/12th century at the latest Persian models were used in Khʷārazm for chancery purposes. They developed under Arabic influence, as is clear from the fact that the oldest collections contain both Arabic and Persian models (cf. Horst)., *e.g.*, the collection of Rashīd al-Dīn Waṭwāṭ, d. 578/1182-3. Bahāʾ al-Dīn Baghdādī, minister of the Khʷārazmshāh Takash, is outstanding among contemporary or later masters of the art of *inshāʾ*. His work, *al-Tawassul ila 'l-tarassul* (ed. A. Bahmanyār, Teheran 1315/1936), was so well known that, even in the 10th/16th century, the famous Ferīdūn Aḥmad Beg [*q.v.*] could make use of it to "complete" his *Munshaʾāt al-salāṭīn*. Similarly at the end of the 6th/12th century al-Mayhanī compiled his collection *Kitāb al-Rasāʾil bi 'l-fārisiyya*, and further the *Dastūr-i dabīrī*. From then on there is no end to the series of Persian *inshāʾ* works. They reached a peak in the second half of the 8th/14th century with the *Dastūr al-kātib fī taʿyīn al-marātib* of Muḥammad b. Hindūshāh Nakhdjuwānī, who, moreover, also stated at that time his intention of compiling an Arabic *inshāʾ* work as a sequel to his Persian one. More detailed information about Persian *inshāʾ* is to be found in Ethé, Roemer and Herrmann (see bibl.).

The Ottoman *inshāʾ* literature is directly linked with the Persian, and thus also with the Arabic. For various reasons it seems likely that the Ottomans drew exclusively on Persian traditions, but in the present state of research direct Arabic influences, *e.g.*, from the Mamluks, cannot *a priori* be excluded. In any case there are Turkish *inshāʾ* works containing Arabic alongside their Turkish and Persian stylistic models. The origin of the Turkish *inshāʾ* literature goes back as far as the beginning of the 9th/15th century, to a work entitled *Tarassul*, containing directions for scribes and model letters, by Aḥmad Dāʿī (d. 824/1421). The next works known to us come from the end of the 9th/15th century: Yaḥyā al-Kātib, *Manāhidj al-inshāʾ*; Ḥusāmzāda Muṣṭafā Efendi, *Madjmūʿa-yi inshāʾ*; Meḥmed b. Edhem, *Gülshen-i inshāʾ*. The *magnum opus* of Turkish *inshāʾ* literature is the famous work of Feridūn Beg [*q.v.*], *Munshaʾāt al-salāṭīn*, composed about 974/1566 (Instanbul ¹1264-5, ²1274-5, two volumes each), in which, however, both genuine and fabricated documents are included. For the development of Ottoman *inshāʾ* in particular, reference should be made to Björkman, *Briefsammlungen* and Matuz, where a comprehensive bibliography of Ottoman *inshāʾ* works may be found.

The foregoing survey may be supplemented by the articles DIPLOMATIC, DĪWĀN, KĀTIB, etc.

Bibliography: From the extensive literature, only especially important and above all recent works will be listed: W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im islamischen Ägypten*, Hamburg 1928; C. Cahen, *Notes de diplomatique arabo-musulmane*, in *JA*, 1963, 311-25; F. (H. R. Roemer)

INSHĀʾ, *makhlaṣ* of the famous Urdu poet, one of the most remarkable figures in Urdu literature, Inshāʾ Allāh Khān. The eldest son of Mīr Māshāʾ Allāh Khān "Maṣdar" al-Djaʿfarī al-Nadjafī, he was born between 1756 and 1758 at Murshidābād [*q.v.*], where the family had settled after its migration from ʿIrāḳ, the grandfather of Inshāʾ, Shāh Nūr Allāh al-Nadjafī having also been born in this town. Māshāʾ Allāh Khān had established himself as a physician and became one of the courtiers of the last independent Muslim ruler of Bengal, Nawwāb Sirādj al-Dawla [*q.v.*]; on the decline of his fortunes, he migrated to Farrūkhābād [*q.v.*]. Inshāʾ received his early education in various sciences including grammar and syntax, logic and philosophy at home, and at the age of sixteen left for Lucknow in search of a post; he joined the court of Nawwāb Shudjāʾ al-Dawla, who had already settled a *djāgīr* having an income of Rs. 10,000 on his father [see awadh and fayḍābād]. He appears to have started composing poetry at a very early age, as he had compiled his *dīwān* of Urdu verses when he was still a boy, "in a new style and without the help of a teacher" (cf. Aḥmad ʿAlī, *Makhzan al-gharāʾib*, fol. 60b). He had also tried his hand at composing Arabic and Persian verses. Polished, cultured, and witty, he soon made an ideal boon-companion to the ruler of Awadh. On the death of Shudjāʾ al-Dawla he left Lucknow in 1786 and served several nobles in turn in Bundelkhand, Delhi and Djaynagar. Unable to find an appreciative patron, he returned to Lucknow, where he joined the retinue of Mīrzā Sulaymān Shukōh (d. 1837), the third son of the Mughal emperor Shāh ʿĀlam II, as a court-poet. Some time later Tafaḍḍul Ḥusayn Khān ʿAllāma, a Shīʿī nobleman and patron of art and literature, introduced him to Saʿādat ʿAlī Khān, the ruler of Lucknow, who assigned him a monthly salary of Rs. 200. Soon they became close friends, but a chance remark on a delicate occasion offended the Nawwāb, and led to his expulsion from Lucknow; though allowed to return later he spent the rest of his life in rather reduced circumstances.

His sharp and sometimes caustic wit made him more enemies than friends. By his superior talents he outshone his rival Ghulām Hamadānī Muṣḥafī [*q.v.*], himself a great poet, upon whom he heaped insults and disgrace. He did not spare even wayfarers and strangers whom he freely ridiculed. He had several literary bouts with his contemporaries, which generally degenerated into obscene satires and lampoons. The libellous procession, headed by clowns and ruffians, which he took out to vilify the aged Muṣḥafī, in a centre of culture like Lucknow, shows to what depths he could at times sink. As a pioneer in the field of Urdu grammar and linguistics he was far ahead of his times. Leaning towards the unconventional, his verse is both amusing and burlesque, constituting a landmark in the development of Urdu poetry. His style is laboured and artificial as against his rival Muṣḥafī's, who was a natural poet.

He was the first important poet to write *rēkhtī*, poetry written in the language peculiar to women, in the Urdu language.

His *Kulliyāt* (ed. Lucknow 1312/1894), which comprises his Urdu, *rēkhtī* and Persian *dīwāns*, *ḳaṣīdas* and five or six *mathnawīs*, contains between 8,000 and 9,000 verses marked chiefly by virtuosity but little poetic feeling. He indulged in verbal gymnastics using most intractable rhymes, sometimes writing a series of *ghazals* in the same metre and rhyme merely to display his vast vocabulary and poetic skill.

He was equally at home in Arabic, Persian, Turkī, Pushtū, Hindī, Bengālī, Pandjābī, Kashmīrī and Pūrbī. His prose works comprise: (1) *Daryā-i laṭāfat* in Persian (ed. Murshidābād 1266/1850; Awrangābād 1916; Urdu tr. by Bridjmohan Dattatrya Kayfī, Delhi 1935), the first work by an Indian author on Urdu linguistics and grammar, composed at the instance of Yamīn al-Dawla in 1222/1807 in collaboration with Mīrzā Ḳatīl, a well-known poet of Persian, who contributed the chapters on logic, prosody and rhetoric. The rest is by Inshāʾ. It shows the author's wide range of study and his grasp of Urdu linguistics and morphology. (2) *Rānī Ketkī Kī Kahānī*, a romantic tale with love, magic and adventure as its theme, written in pure Hindī, without a single word of Arabic or Persian origin. In spite of such limitations, the narrative is neither dry nor artificial although it is interspersed with archaic words and expressions (ed. Delhi 1937, Karachi 1955). (3) *Silk-i Gawhar*, also a love story in Urdu prose, without any dotted letter, in clear imitation of the *Sawāṭiʿ al-ilhām* and *Mawārid al-kalim* of Fayḍī [*q.v.*], but much inferior, both in diction and phraseology. The story is insipid and colourless (ed. Imtiyāz ʿAlī ʿArshī, Rampur 1948). (4) A fragment of his diary in Turkī from 18 Djumādā II 1223/12 July 1808 to 25 Djumādā II 1223/18 August 1808 containing some very interesting and useful information not found elsewhere (MS. Rampur State Library). This seems to be his last work, since he stopped writing after his only son Taʿāl Allāh died in the prime of his youth, in the same year. Two years later he earned the displeasure of his patron Nawwāb Saʿādat ʿAlī Khān, and this ultimately led to his utter ruin. Disillusioned and broken-hearted, he died in comparative obscurity in 1233/1818 in Lucknow, which had seen him at the height of a glory and fame seldom rivalled by any other Urdu poet or litterateur.

INSIGNIA [see nishān, rasm, shiʿār, wisām].

INSTITUT D'ÉGYPTE, one of the centres of intellectual and scientific life in present-day Cairo. Its history is in fact that of two separate institutes.

(a) The first was the Institut d'Égypte founded by Bonaparte in Cairo, under the presidency of Monge, on 20 August 1798 (3 Fructidor). Its creation had been made possible by the existence in Bonaparte's expedition of a "Commission of the Sciences and the Arts", in effect an intellectual general staff which Bonaparte had decided should accompany him when he left France. The Institut d'Égypte held its meetings in the palace of Ḥasan Kāshif, in a sort of academy which included scholars, artists, the high-ranking officers and the heads of the various services. It contained four sections (mathematics; physical and natural sciences; political economy; literature and fine arts). It was to have consisted in all of forty-eight members (twelve in each section), but this number was never reached. All the members of this institute belonged to the expeditionary force, with the exception of one Egyptian who was a member of the section of literature and fine arts: Raphaël Anṭūn Zakhūr Rāhib, a priest of the Greek Catholic rite, who later taught in Paris at the École des Langues Orientales (1803-16) and who on his return to Egypt published, among other works, the first book to be printed by the press at Būlāḳ, an Italian Arabic dictionary (1822).

In addition to producing geographical maps based on astronomical data, the Institut collected "all the details necessary for information about the agricultural resources, the industry, the customs and the political condition of the inhabitants". The Institut controlled the printing works directed by the orientalist Marcel. This Institut, whose existence was necessarily brief owing to political and military circumstances, produced outstanding work intended "to cause the miseries of the conquest to be forgotten through the benefits of peace", according to Gabriel Guémard. The reports of the meetings were published in the *Décade Égyptienne*. After the evacuation of Egypt, the large collections and notes were made known in the famous *Description de l'Égypte*, a unique source of information for the student of late 18th century Egypt both from the point of view of Egyptology and of modern history. This *Description* consists of volumes of text together with an outstanding collection of geographical maps and plates on a wide variety of subjects.

(b) On 6 May 1859, during a preliminary meeting, there was founded in Alexandria under "the illustrious protection of His Highness the Viceroy of Egypt" (Muḥammad Saʿīd Pasha), the Institut Égyptien, whose aim was to continue the traditions of the Institut founded by Bonaparte. European and Egyptian scholars met there on an equal footing. This "scientific and literary" society was transferred to Cairo in 1880. It adopted again the old name of Institut d'Égypte on 1 November 1918 and is still continuing its activities more than a hundred years later. Its Arabic name is *al-Madjmaʿ al-ʿilmī al-miṣrī*. According to its statutes, revised in 1918, there were envisaged fifty titular members, resident in Egypt; in addition there are appointed honorary members, the number of which must not exceed one hundred, and an unlimited number of corresponding members. The Institut publishes regularly a Bulletin (*madjalla*) which, from 1859 to 1918, was called *Bulletin de l'Institut Égyptien*, then, from 1918, *Bulletin de l'Institut d'Égypte*; it publishes also *Mémoires* which appear at irregular intervals. It publishes in Arabic, French and English, but up to now the publications have been mainly in French and English. The best outline of the activities of the Institut d'Égypte is in the bibliographical work by Jean Ellul, *Index des Communications et Mémoires publiés par l'Institut d'Égypte (1859-1952)*, Cairo 1952. Apart from some modifications to bring them in line with the new legislation of the U.A.R., the statutes of 1918, published at that time in the *Bulletin*, still remain the legal basis of the Institut d'Égypte.

INSTRUMENT [see ĀLA].

INTIDĀB [see MANDATE].

INTELLECT [see ʿAḲL].

INTENTION [see NIYYA].

INTERCESSION [see SHAFĀʿA].

INTIHĀʾ, "end, conclusion", a term in rhetoric. In Ḳazwīnī's *Talkhīṣ al-miftāḥ* (published under the title *Matn al-talkhīṣ*, Cairo n.d., 126-7), its extended version, the *Īḍāḥ* (ed. Muḥ. ʿAbd al-Munʿim Khafādjī, Cairo 1369/1950, vi, 153-4), the various works based on the *Talkhīṣ*, as well as in some earlier texts, the *intihāʾ* is mentioned along with the *ibtidāʾ*, "introduction", "prologue" [*q.v.*], and the *takhalluṣ*, "transition" [*q.v.*], as one of the three sectons of the poem or prose composition (some mention also the *khuṭba*, "sermon") which should receive particular attention. The author should bear in mind that the end of his poem or composition is most likely to be remembered by his audience and can therefore make up for earlier deficiencies, as well as spoil an otherwise successful work. He should not only show himself at his best, but should also make clear that no further developments of his theme are to follow, and this may be achieved by ending with an invocation (*duʿāʾ*), by the use of words derived from the roots *kamala*, "to be complete", *khatama*, "to seal, finish", etc. (according to some late handbooks; for examples see the chapter in Ibn Ḥidjdja's *Khizānat al-adab*, Cairo 1304/1886, 462, 464, 466), or by other means which are not always clearly defined. Among early scholars Abū Hilāl al-ʿAskarī (*K. al-Ṣināʿatayn*, Cairo 1371/1952, 443-5) advocates the use of proverbs at the end of poems, and Ibn Rashīḳ holds that the *duʿāʾ* should only be used at the end of poems addressed to kings (a particular variant of this, the *duʿāʾ-i-taʾbīd*, "prayer for [the ruler's] perpetuity" is mentioned by Rashīd al-Dīn Waṭwāṭ, *Ḥadāʾiḳ al-siḥr*, ed. ʿAbbās Iḳbāl, Teheran n.d., 33). Some frequently quoted verse examples sum up the previous argument by means of a hyperbole. Most authors point out that, like the *takhalluṣ*, the *intihāʾ* receives much attention in the work of later poets.

The *intihāʾ* is often discussed under headings like *ḥusn al-maḳṭaʿ*, *barāʿat al-maḳṭaʿ* (*maḳṭaʿ* in this context to be distinguished from the same term as applied to the end of a line of poetry), *ḥusn al-khātima*, etc.

Considerable attention is given to the *intihāʾ* in the Ḳurʾān, but scholars following Ḳazwīnī concede that experience is needed to appreciate the stylistic qualities of the endings of the *sūras*.

(S. A. Bonebakker)

INTIḤĀR, "suicide", expressed more technically in Arabic by *ḳatl nafs-* with pronominal suffix (as against *ḳatl nafs* or *al-nafs* "homicide"). *Intiḥār* designated originally, and does so in its occurrence in the *ḥadīth*, suicide by piercing or cutting one's throat. At an undetermined but possibly quite early date, the word was singled out to mean suicide in general. It is thus used in modern Arabic and in Turkish, also in Persian.

The Ḳurʾān contains several passages (II, 54/51, IV, 66/69, XVIII, 6/5) that might possibly be interpreted (but, in fact, are not) as indicating a factual, even condoning attitude toward suicide. No clear prohibition of suicide appears in it. The most relevant passage in this respect, IV, 29/33: "and do not kill your selves (*anfusakum*)", is interpreted by leading exegetes as referring to mutual killing, with *anfus-* to be understood as reciprocal in meaning, as in II, 85/79 and elsewhere. The context supports this interpretation. However, the verse is often cited as evidence for the divine prohibition of suicide.

The Prophet himself certainly disapproved of suicide. A number of *ḥadīth*s leave no doubt that Islam forbids it. The person who commits suicide, regardless of the circumstances (unless it happens accidentally), forfeits Paradise. His punishment in Hell will be the repetition of the very act by which he killed himself. The Prophet is said to have refused to say the customary prayers for a suicide. Suicide was thus generally considered a grave sin (for instance, al-Dhahabī, *Kabāʾir*, Cairo 1385/1965, 119 ff., ch. 29; Ibn Ḥadjar al-Haythamī, *Zawādjir*, Cairo 1370/1951, ii, 89 f.). At times, it was pronounced a more distressing act than murder (Ibn Ḳutayba, *ʿUyūn*, Cairo 1343-49, iii, 217; Ibn ʿArabī, *Futūḥāt*, Cairo 1329, ii, 234, ch. 147, iv, 463 f., ch. 960; cf. also the case posed by Ḳāḍīkhān, *Fatāwī*, Calcutta 1835, iv, 198 f.).

The legal literature has comparatively little to say about successful suicide, and no good evidence appears to be available as to the medieval legal attitude toward abortive suicide attempts. The most debated question, and no doubt the one of the greatest practical importance, was, and still is, whether the funeral prayers may of may not be accorded to suicides. Authorities within the various legal schools have held divergent views on this point and the practice appears to have varied. The more charitable view may have widely prevailed. For instance, when ʿĪsā b. Yūsuf al-ʿIrāḳī, a blind professor at the Amīniyya in Damascus, committed suicide under tragic circumstances in 602/1206, people refused to pray for him, but another prominent Shāfiʿite scholar did (Ibn Kathīr, *Bidāya*, Cairo 1351-58, xiii, 44, from Abū Shāma). Details occasionally discussed by jurists were such points as the inapplicability of the *ʿāḳila* [*q.v.*] in cases of suicide (Ibn Abī Zayd, *Risāla*, ed. trans. L. Berchet, Algiers 1949, 246); the disposition of the *mahr* [*q.v.*] of a woman who commits suicide before the marriage is consummated (al-Shaybānī, *al-Djāmiʿ al-ṣaghīr*, Būlāḳ 1302, margin of Abū Yūsuf, *Kharādj*, 37; Ḳāḍīkhān, i, 436); the legal responsibility of the person who by digging a well or the like inadvertently makes it possible for someone to commit suicide (Ḳāḍīkhān, iv, 134, 464; for the Muʿtazilī view on the moral problems caused by knowingly enabling a person to kill himself, cf. ʿAbd al-Djabbār, *Mughnī*, xi, Cairo 1385/1965, 232 f.; cf. also Ibn Ḳayyim al-Djawziyya, *Miftāḥ dār al-saʿāda*, Cairo, n.d., ii, 53); or, according to modern Shīʿa law, the validity of a suicide's will depending on the time it was made (A. A. A. Fyzee, *Outlines of Muhammadan law*, Calcutta 1949, 306).

Lay views and attitudes with respect to suicide present a rather different picture. The threat of committing suicide was not infrequently used as a psychological weapon, in one instance even by the famous Ṣūfī Abu 'l-Ḥusayn al-Nūrī for the purpose of forcing the deity to confirm his saintliness by some minor miracle, provoking the strong disapproval of al-Djunayd (al-Sarrādj, *Luma*ʿ, ed. R. A. Nicholson, Leiden-London 1914, 327; *Ta'rīkh Baghdād*, v, 132 f., omitting al-Djunayd's disapproval). A woman might threaten suicide in order to force her husband to give her a divorce (Ibn Taymiyya, *Fatāwī*, Cairo n.d. [1965-6], iv, 148). "Suicide "is widely used figuratively to indicate voluntary exposure to serious danger in war or through such activities as excessive praying and fasting (which, however, is also literally branded as suicide, cf. al-Muḥāsibī, *Khalwa*, ed. I. A. Khalifé, Damascus 1955, 33; al-Sarakhsī, *Uṣūl*, Cairo 1372-73, i, 120; B. Reinert, *Die Lehre vom tawakkul*, Berlin 1968, 267 f.) or imprudent talkativeness (al-Sulamī, *Ṭabaḳāt*, ed. J. Pedersen, Leiden 1960, 21). It also occurs as a metaphor for extraordinary effort and unusual excitement. Muslim poets refer to suicide half seriously half playfully in various connexions, as, for instance, ʿUmar b. Abī Rabīʿa, *Dīwān*, ed. P. Schwarz, no. 127 (*Aghānī*³, i, 158); Tamīm b. al-Muʿizz, *Dīwān*, Cairo 1377/1957, 50, 251; al-Thaʿālibī, *Yatīma*, i, 322 (cf. also Yāḳūt, *Udabā'*, ii, 188; al-ʿImād al-Iṣfahānī, *Kharīda*, Syr. poets, Damascus 1375/1955, i, 556; al-Ibshīhī, *Mustaṭraf*, Būlāḳ 1268, i, 229); al-Rāghib, *Muḥāḍarāt*, Cairo 1287, i, 152; al-Ṣafadī, *Ghayth*, Cairo 1305, ii, 262 f. Even religious scholars might make incidental reference to suicide to prove some particular point (ʿAbd al-Djabbār, *Mughnī*, vi, 16, 188, xi, 232 f., 393, 395 f., 492 ff.; al-Ghazālī, *Iḥyā'*, Cairo 1352/1933, ii, 212, iv, 219 f.).

Famous cases of suicide from pre-Islamic times are occasionally mentioned, as, for instance, King Saul (al-Yaʿḳūbī, *Ta'rīkh*, i, 53); Judas Iscariot (al-Mubarrad, *Balāgha*, ed. R. ʿAbd al-Tawwāb, Cairo 1965, 62); Cleopatra (Masʿūdī, *Murūdj*, ii, 289 f., etc.); or the Jews fighting the Romans (Ibn Khaldūn, *ʿIbar*, ii, 137). The Indian custom of the self-sacrifice of widows and an assumed general Indian propensity for suicide were often referred to (for instance, al-Ṭabarī, *Dīn*, ed. A. Mingana, Manchester 1923, 11; al-Muṭahhar, *Bad'*, ed. C. Huart, iv, 16 ff., trans., 14 ff.; Ibn Baṭṭūṭa, iii, 136 ff.). Cases of suicide of non-Muslims and heretics, wishing to retain their human dignity and to remain faithful to their beliefs, are reported with a mixture of disgust and admiration. Suicide because of unrequited or illicit love was celebrated by famous stories in many *adab* works, in particular, the large literature on love (for instance, al-Daylamī *ʿAṭf*, ed. J. Vadet, Cairo 1962, 77, 122-125; Ibn al-Djawzī, *Dhamm al-hawā*, Cairo 1381/1962, 356, 358, 455, 570-581); for the heroine of a romance, it was only natural to think of suicide (Gurgānī, *Wīs and Rāmīn*, Teheran 1337/1959, 76, trans. H. Massé, Paris 1959, 93). The literary topic was no doubt a romantic reflexion of reality. Its pre-Islamic roots seem to lie largely in the Hellenistic world.

Popular Hellenistic philosophy helped to strengthen the idea that death was preferable to a life of dishonour or otherwise unbearable. It probably also contributed to the discussion of whether wishing to be dead, without actually laying hands on oneself, was a legitimate desire—something that Muslim religious scholars would not accept. A philosophical view of the meaning of suicide was probably widespread among intellectuals of the 3rd/9th and 4th/10th centuries (cf. al-Djāḥiẓ, *Ḥayawān*, Cairo 1323-25, ii, 99, 114, or the poems addressed to a suicide cited by Ibn Abī Ṭāhir Ṭayfūr, *Manthūr*, Ms. Cairo *adab* 581, fol. 88b). Some of the discussion is preserved for us from the circle of Abū Ḥayyān al-Tawḥīdī. Human existence, it was argued there, possesses value only if it is accompanied by virtue; otherwise, it is equivalent to non-existence, and consequently, it would seem to make no difference if a base and imperfect life is ended by suicide. Compelling circumstances for committing suicide are destitution, disappointments, situations a person is unable to cope with, and love affairs that go beyond one's ability to handle. The occasional and temporary prevalence of the non-rational powers, which is unavoidable since human nature is the result of the simultaneous presence of all the three powers of the soul, explains the occurrence of suicide. Suicide is to be condemned, not simply on the strength of religious tradition but as an irrational act that human beings should not commit but are at times unable to avoid (*Muḳābasāt*, Cairo 1347, 215 ff., cf. *JAOS*, lxvi (1946), 248 ff.; al-Tawḥīdī and Miskawayh, *Hawāmil*, ed. A. Amīn and A. Ṣaḳr, Cairo 1370/1951, 150 ff., cf. also 72 ff. and 187 ff. on the fear of or desire for death). Al-Bīrūnī, however, quoted Greek sources in order to condemn suicide (*India*, ed. E. Sachau, 284, trans. ii, 171).

Many types of suicide are mentioned widely dispersed in the sources. Even such incidentals as the suicide note are reported (Yāḳūt, *Udabā'*, vii, 146; Ibn Kathīr, *Bidāya*, xiii, 41 [?]; Ibn Ḥadjar, *Durar*, Hyderabad 1348-50, iii, 392). Since our principal sources of information are historical and political, it is not surprising to find as the most common motives the wish to anticipate certain capture or death at the hands of an enemy and, for both men and women, the desire to escape dishonour and humiliation in turbulent times. Use was made on occasion of the religious abhorrence of suicide in order to camouflage political murder as suicide. We also hear of unsubstantiated rumours of suicide upon the death of high-ranking officials, and suspicions of a person's orthodoxy gave rise to gratuitous accusations of suicide as in the case of the poet, Abu 'l-ʿAlā' al-Maʿarrī (Yāḳūt, *Udabā'*, i, 194 f.). Civic dishonour, the fear of punishment, unbearable disease (cf. the case of Ibn Shuhayd who, however, merely contemplated suicide: Ibn Saʿīd, *Mughrib*, Cairo 1952, 84; Ibn Bassām, *Dhakhīra*, Cairo 1358/1939, i/I, 282; Ch. Pellat, *Ibn Shuhayd*, ʿAmmān [1966], 67-8), insanity , guilt feelings, and the desire for revenge are attested as causes of suicide.

In the absence of meaningful statistics, it would be rash to draw any sociological conclusions. The common motive of conjugal problems, for instance, seems to play only a relatively minor role according to the medieval literature, but whether this is due to lack of information or to the social climate created by Islam cannot be decided. Suicides of religious scholars are rarely reported. Possible instances of cases in which a scholar's political or administrative activities can be ruled out as the cause are the above mentioned al-ʿIrāḳī in 602; the eccentric Ibn Sabʿīn [*q.v.*] in 669; ʿAbd al-Raḥīm b. Abī Bakr al-Djazarī al-Naḥwī in 698; Muḥammad b. Mūsā al-Ashḳar in 731 (Ibn Ḥadjar, *Durar*, iii, 392); Aḥmad b. Muḥammad b. al-Zarkashī in 788; ʿAbd al-Ḳādir al-Ḥanbalī in 801 (al-Sakhāwī, *Daw'*, iv, 300); or, in a very different environment, the case mentioned by W. Ivanow, *Satpanth*, Leiden-Cairo 1948, *Collectanea*, i, 18.

The total number of all cases that can be collected from the literature remains small. However, the casual and metaphorical use of "suicide", the urgency of the discussion of the question of funeral rites, and similar matters, among them the constant presence of the thought of suicide in popular works such as the *Arabian Nights* and modern fairy tales and plays (for instance, W. Eberhard and P. N. Boratav, *Typen türkischer Volksmärchen*, Wiesbaden 1953; O. Spies, *Türkische Puppenspiele*, Emsdetten/Westf. 1959, 77, 104 f.; E. Littmann, *Arabische Märchen und Schwänke*, Wiesbaden 1955, 56), make it quite clear that suicide was a part of daily life in the medieval Muslim world. Yet, even if we take into account the likelihood that suicides were hushed up wherever possible because of religious scruples, and the fact that the bulk of available biographical information concerns scholars who were most sensitive to the religious injunction against suicide and pays hardly any attention to other, numerically much stronger, classes of the population, the impression prevails that, everything considered, suicide was of comparatively rare ocurrence. The assumption that the teachings of Islam were an effective deterrent may very well be true.

Rosenthal)

INVESTITURE [see bayʿa, khilʿa, taḳlīd].

INZĀL [see waḳf].

IPSHIR MUṢṬAFĀ PASHA (?-1065/1655), Ottoman Grand Vizier, was related to the "rebel" Ābāza Meḥmed Pasha (see ābāza, i) (his sister's son according to Naʿīmā (ed. of 1282), ii, 302, iii, 194, v, 196; his uncle's son, according to *Ḥadīḳat al-djawāmiʿ*, i, 182); his nickname Ipshir is probably due to his belonging to the Apsil tribe of the Abkhāz [*q.v.*] (see Ismail Berkok, *Tarihde Kafkasya*, Istanbul 1958, 142). He was brought up by Ābāza Meḥmed Pasha, who, as governor of Aleppo, procured him the post of *sandjaḳ-begi* of Tarsus in 1026/1617 (Naʿīmā, v, 196). He was with Ābāza in his battle with Murtaḍā Pasha (Naʿīmā, ii, 302), during his sojourn in Bosnia and at Belgrade, in the Polish war in 1043/1633, and in Istanbul until Ābāza's death in 1044/1634. Then Kemānkesh Muṣṭafā Pasha procured him admission into the Palace service, and by 1049/1639 he had risen to be Büyük Mīr-akhūr. He was thereafter successively governor of Budin, Silistre, Marʿash, Mawṣil, Van, Karaman and (1054/1644) Temeshvar; he was disliked and feared, but had a strong personal following. Although he took part in the revolt of Dervīsh Meḥmed Pasha in 1056/1646, he was appointed *beglerbegi* of Anadolu as being the only governor capable of putting down the various rebels (Ḥaydar-oghlu Meḥmed, Varvar Alī Pasha [*qq.v.*], Gürdjü Nebī), and in 1060/1650 he was endeavouring to compose dissension among the Druzes [see durūz] in the Lebanon. He managed to avoid being sent against his friend Ābāza Ḥasan [see ābāza (2)], and finally was himself won round to the "*djelālī*" cause. On 1 Shawwāl 1061/17 September 1651 he made himself master of Ankara, and extended his control over Eskishehir. His plans to put an end to the influence of the *agha*s in the capital, to restore the Durūz to submission and to support the cause of the *sipāhī*s won him a strong following, but a composition was reached with the central authorities by which Ipshir was appointed governor of Aleppo (1062/1652). Here he began to put into effect his plans for reform, and procured the support of governors of neighbouring provinces; but in spite of his lofty aims the populace began to complain of his extortions, and he rejected suggestions from Istanbul that he should disband some of his forces. Finally, in view of the inability of the statesmen in Istanbul to agree upon another candidate and their hope that the appointment would remove the *djelālī* menace, the seal of the Grand Vizierate was sent to him in Aleppo (Dhu 'l-Ḥidjdja 1064/October 1654). He announced that before coming to Istanbul he would settle the problems of the eastern frontier, and published his programme of reform. This provoked alarm in Istanbul, and after being repeatedly summoned to the capital in December he started out from Aleppo. On his leisurely progress across Anatolia he re-distributed to his followers *muḳāṭaʿa*s [*q.v.*] and offices which had already been sold, claiming that his appointees were more honest and that he was protecting the populace from extortion, and did not hesitate to imprison or even execute governors accused of malpractices. At the end of February 1655, having left the *ḳāʾimmaḳām* and the Müftī's son at Üsküdar as hostages, he ventured to cross to the Palace; an interview with the Sultan banished his suspicions that his invitation to the capital was a trap, and after making a ceremonious entry into the city he was married to the late Sultan Ibrāhīm's daughter ʿĀʾishe.

The vigorous and harsh measures which he took, however, soon offended even his closest supporters, and the *sipāhī*s, finding their hopes in him unfulfilled, allied themselves with his enemies the Janissaries. A revolt broke out on 3 Radjab 1065/9 May 1655, and next day, on the insistence of the mutinous troops, Ipshir Pasha was executed. He left the reputation of a skilful warrior and horseman, religious, stern, and puritanical in his dress and diet.

IʿRĀB, a technical term in Arabic grammar. It is sometimes found translated as "inflexion", as by G. Flügel (*Die gram. Schulen*, 15), who also unjustifiably extended the sphere of this "inflexion".

Nevertheless in translating thus, one comes up against the way in which the Arab grammarians envisaged this "inflexion".

It should be pointed out, first of all, that these grammarians had no proper term for "declension" and "conjugation", and no general term for "case" and "mood". They proceed in a purely formal manner. Taking *sounds* into consideration, they make the following division: (a) *rafʿ* = nominative (as *al-radjul-u*) and indicative (as *yaḳtul-u*), because both take *-u* and are thus *marfūʿ*; (b) *naṣb* = accusative (as *al-radjul-a*) and subjunctive (as *yaḳtul-a*), because both take *-a* and are thus *manṣūb*; (c) *djarr* (*khafḍ* to the Kufans) = genitive (as *al-radjul-i*), because it takes *-i* and is thus *madjrūr* (*makhfūḍ*). This last has no counterpart in the imperfective of the verb; the latter, instead of adding a vowel, suppresses a vowel: they say: *djazm* "cutting" and this imperfective is *madjzūm* "apocopated" (as *yaḳtul*); it forms the jussive.

In this formal distribution of the three short vowels of the Arabic language the Arab grammarians mingle noun and verb. In addition, for the noun, they consider only the singular, adding merely the qualification *munṣarif* to nouns of three cases (as *al-radjul* above) and *ghayr munṣarif* to those of only two cases, such as Aḥmad: *aḥmad-u* (nom.), *aḥmad-a* (gen. and acc.). In the imperfective of the verb they introduce formal distinctions of moods only when these are formed by the addition of a short vowel (*-u*, *-a*) or by its suppression (*madjzūm*). Arab grammarians, then, do not think of "declension" and "conjugation" as an organic whole, or as a system. Hence the lack of denomination in their terminology and also the difficulty of giving complete precision to "inflexion", when translating *iʿrāb* thus.

On the other hand, and this is most important, they *always* consider the occurrence of the short vowels in terms of a cause: a *ʿāmil*, "a governor". Things are regarded from a syntactical point of view. This is true to such an extent that if *iʿrāb* is known all the *ʿawāmil* are known, and the major part of Arabic syntax is also known; thus *ʿilm al-naḥw* can also be called *ʿilm al-iʿrāb* (*Dict. of Techn. Terms*, 17). As for de Sacy, he considered that the word *iʿrāb* could not be rendered more exactly than by "Syntax of terminations" or "terminational syntax" (*Anthologie grammaticale*, i, 186, end n. 2). The *iʿrāb* thus understood is outside morphology, as we understand it.

The conclusion from all this is that we have no adequate term directly to translate *iʿrāb*. A periphrasis is necessary; it is best to adopt the definition that Arab grammarians have themselves given of *iʿrāb*, for example that of the *Taʿrīfāt* of al-Djurdjānī (Cairo 1321), 20: *huwa ʾkhtilāf ākhir al-kalima bi-ʾkhtilāf al-ʿawāmil lafẓ^{an} aw taḳdīr^{an}*, "it is the difference that occurs, in fact or virtually, at the end of a word, because of the various antecedents that govern it"; *bi-ḥaraka aw ḥarf*, "by *ḥaraka* or *ḥarf*", adds the *Mufaṣṣal* of al-Zamakhsharī (§ 16).

This definition is bound up with a whole system. By *iʿrāb* Arab grammarians denote, first of all, basically the use of the three *ḥarakāt*: *ḍamma* (*-u*), *kasra* (*-i*) and *fatḥa* (*-a*), at the end of the singular noun, which is thus *muʿrab* (the *ghayr munṣarif* is included). This is *iʿrāb lafẓ^{an}*, "actual *iʿrāb*". Words like *ʿaṣa-n* "stick", *maʿna-n* "sense, meaning", which are, in fact, invariable in the singular, are nonetheless called *muʿrab*, but *taḳdīr^{an}*, "virtually", because of the *aṣl* (base): *rafʿ*: **ʿaṣawu-un*, **maʿnay-un*, etc., which is supposed "virtually" to exist behind these words. They contrast *iʿrāb* with its opposite: *bināʾ* "to build", which denotes the state of a word that is fixed to one final *ḥaraka* or to none at all, independently of any *ʿāmil*, or whatever the *ʿāmil* may be. It is thus called *mabnī*: *mabnī ʿala ʾl-ḍamma* (as *mundhu* "since"), *ʿala ʾl-kasra* (as *hāʾulāʾi* "these"), *ʿala ʾl-fatḥa* (as *ayna* "where?"), or *mabnī ʿalā sukūn* "fixed to quiescence" (as *kam* "how much?"). The Baṣran grammarians thus established the following principles: *iʿrāb* belongs to the noun, *bināʾ* to the verb and the *ḥurūf* (particles). This is the *aṣl*, the base. Thus the imperfective of the verb has no right to be *muʿrab*; it receives its *iʿrāb* as a *farʿ* (branch) by virtue of its resemblance to the noun; this is why it is called *al-muḍāriʿ* "resembling" [the *ism fāʿil*, the *nomen agentis*]. *Al-asmāʾ al-sitta*, in the construct state, end, from their point of view, with a *ḥarf sākin*: *alif*, *wāw* or *yāʾ*; words like *dhū* "possessor of", *abū* "father of", *akhū* "brother of", *ḥamū* "father-in-law of", *hanū* "thing of", *fū* "mouth of". In these words there is *iʿrāb bi-ḥarf*, "*iʿrāb* by means of a *ḥarf*" (the above-mentioned *ḥarf sākin*), *farʿ* of the basic *iʿrāb* of the noun by *ḥaraka*, the *aṣl*.

The plurals of nouns in *-ūna*, *-īna* and the duals in *-āni*, *-ayni*, like: *al-muslim-ū-na*, *al-muslim-ā-ni*, etc., have been the subject of long discussion. Al-Khalīl and Sībawayhi, followed by the majority of Baṣrans, see in the *alif*, *wāw* or *yāʾ* of the Arabic orthography merely a *ḥarf al-iʿrāb*. By this expression is meant the last *ḥarf* of a word, which carries the *iʿrāb* and cannot be suppressed without making the word unrecognizable, like the *d* in *Zayd*. There is, strictly speaking, no *iʿrāb*, but the following *n* is a kind of *ʿiwaḍ*, a "compensation" for the *ḥaraka* and the *tanwīn* (*-un*, *-in*, *-an*) of the indefinite singular noun, which have disappeared in the formation (Sībawayhi, i, 3, 12-3, 17-8); this noun, in their view, precedes the noun defined by *al-*. In the imperfective, on the other hand, the *nūn*, the sign of the *rafʿ* in the masc. pl. *yaḳtul-ū-na*, *taḳtul-ū-na*, of the duals *yaḳtul-ā-ni*, *taḳtul-ā-ni*, and of the fem. sing. *taḳtul-ī-na*, is thought of as constituting the *iʿrāb* (Sībawayhi, i, 4, line 8), for it can be suppressed without making the forms unrecognizable. As for the fem. pl. *yaḳtul-na*, *taḳtul-na* (*ibid.*, 4, lines 20-4; Ibn ʿAḳīl, i, 36, lines 14-5), it falls under *bināʾ*, *mabnī ʿalā sukūn* before *-na*, a *ḍamīr* (personal pronoun), from their point of view. The energetic, on the other hand, is seen only as comprising a particle, the *nūn*, before which the verb is *mabnī ʿala ʾl-fatḥa* (Sībawayhi, i, 5, 6): *yaḳtula-n* or *yaḳtula-nna*, etc.

The verbal forms are thus considered in isolation, not being included in a whole, a conjugation, and this confirms that which we have seen above. The interest of Arab grammarians lies elsewhere. That which they study is the organization of the *iʿrāb*, as they understand it: they first separate the *muʿrab* and the *mabnī* then, within the *muʿrab*, distinguish the actual and the virtual, and then finally establish the ramification of the *furūʿ* from the basic *iʿrāb* of the noun by *ḥaraka*, the *aṣl*.

Arab grammarians give three explanations of the term *iʿrāb* (Ibn al-Anbārī, *Asrār al-ʿarabiyya*, 9-10). The most common (cf. *Lisān*, ii, 78, 2 from end/i, 589a, 21-2) is that which makes *iʿrāb* the infinitive of *aʿraba ʿan* in the sense of "make clear, manifest", because *iʿrāb* "shows" the various functions of the word in the sentence: agent, object, construct, etc. (See also Ibn Djinnī, *Khaṣāʾiṣ*, Cairo 1371/1952, i, 35-7). This is scarcely satisfactory. J. Weiss (see IʿRĀB, in *EI*[1]) sums up the solutions of the Orien-

talists. Like him, we think that "in this, too, it is the simplest that is the most likely", that is, to take *a'raba* in the sense of: "to Arabize, pronounce a word in the manner of the pure Arabs" (cf. the remark of Ibn Djinnī, *ibid.*, 36, lines 7-8). We would wish to bring this out in the light of the linguistic situation in which at least the first three generations of grammarians, from 'Abd Allāh b. Abī Isḥāḳ (born about 30/651, d. 117/735) to Sībawayhi (d. 177/793), found themselves: Arabic without *i'rāb* learnt and spoken by the Arabized, Arabic without *i'rāb* spoken in the towns themselves that the Arabs had created (Baṣra, Kūfa; see H. Fleisch, *Arabe classique et arabe dialectal*, in *Travaux et Jours*, no. 12 (1964), 43-5) and the contrast provided by contact with the Beduin Arabs whose speech was still equipped with *i'rāb*. The Arab grammarians wished to "Arabize" the language of their society, to make it conform to the speech of these Beduins, the carriers of the "true" Arabic; this is most probable and quite sufficient to explain *a'raba, i'rāb* as we have taken it. By doing this, we are maintaining that *i'rāb* was retained by the tribes at least until the end of the 2nd/8th century (without deciding for later times; see H. Fleisch, *Traité de philologie arabe*, i, § 58).

Muḥyī al-Dīn 'Abd al-Ḥamīd, Cairo 1370/1951); Zamakhsharī, *Mufaṣṣal*, §§ 15-8, 159 (2nd ed. J. P. Broch) and *Sharḥ* of Ibn Ya'īsh, 57-88, 400-5 (ed. G. Jahn); Raḍī al-Dīn al-Astarābādī, *Sharḥ al-Kāfiya*, i, 14-30, ii, 2-3, 209-15 (Istanbul 1275). (H. FLEISCH)

IRĀDE, literally "will", a term adopted in Ottoman official usage from 1832 to designate decrees and orders issued in the name of the Sultan. The formal procedure was for draft decrees prepared by ministers and officials to be addressed to the Sultan's chief secretary (*Serkātib-i shahriyārī*), who read them to the Sultan and received and noted his comments. If he approved, the chief secretary then communicated the text to the Grand Vizier, as the Sultan's will. Under the constitution, the Sultan's function was limited to giving his assent to the decisions of the government. The term *Irāde* remained in use for this assent. (ED.)

'IRĀFA [see 'ARĪF, KIHĀNA].

'IRĀḲ, a sovereign State, of the Muslim religion, for the most part Arabic-speaking, situated at the eastern end of the Fertile Crescent.

i.—GEOGRAPHY

The structure of 'Irāḳ paradoxically derives its originality from the fact that it forms part of a large geographical block of territory. From the Arabo-Syrian desert tableland which it faces along its south-western flank, it takes its general aspect and its climate. All along its frontiers on the North-East, on the other hand, it shares the orientation and relief of the folded mountain-chains of western Asia, which give it its two great rivers. But these very rivers, and the vast plain they irrigate, endow it, under its classical name Mesopotamia, with an individuality which is undeniable.

This division, into two areas facing respectively South-West and North-East, is also that which roughly speaking distinguishes *'Irāḳ 'arabī* and *'Irāḳ 'adjamī*. But there is a further and no less essential distinction between Upper Mesopotamia on the one hand, the country of Aḳūr or the Djazīra, hemmed in between the Tigris and the Euphrates, and 'Irāḳ properly speaking or Mesopotamia, where the two rivers follow a much more indefinite course. The climate also reflects this difference; the mean annual rainfall varies from 50 mm. in the South to 300 mm. in the North. These two zones are linked together at the level of the Baghdād region where the Tigris and Euphrates, approaching each other very closely for the first time, make it possible for a whole system of navigable routes to be established, providing the necessary crossings and connections.

Symbolised by this intermediate region between steppes and mountains in one direction, between Upper Mesopotamia and Lower Mesopotamia in the other, the situation of the country is indeed that of a cross-roads, and not merely on a local scale. The geography of 'Irāḳ evokes world history, at the meeting-point of two great axes, that from the Mediterranean to Upper Asia, and that from Western Europe to the Indian Ocean.

Northern 'Irāḳ. It is in the Djazīra that the distinction between the steppe lands in the South-West and the mountains in the North-East is most clearly perceptible. There the steppe undergoes a more or less regular transformation, from West to East, to lower and less broken country: as regards climate and ecology, this is a classical Bedouin zone, and what is more, a zone of transitions and contrasts. The Euphrates, which within the territory of 'Irāḳ is not joined by any tributary strictly speaking, is above all a river providing irrigation. Its valley, excavated from a shallow layer of alluvial deposit which conceals the limestones and marls of the Arabo-Syrian bed-rock, is the traditional home of a sedentary and more or less continuous agriculture, for which purpose water is drawn from the river by means of wheels with buckets or by systems of ropes and other methods operated by animals. The agricultural possibilities are however greater than these antiquated practices would lead one to suppose: for since the Middle Ages, when the Arab geographers spoke of the fertility of the country (cf. Ibn Ḥawḳal, trans. Wiet, 214 f.), the situation has deteriorated, to allow a greater degree of bedouinization (see Ibn Ḥawḳal, 221, 223), the effects of which were finally confirmed during the 18th century. Today, the State of 'Irāḳ is proposing to undertake and develop a policy of constructing large dams (the al-Ramādī-al-Ḥabbāniyya complex), in order to facilitate and develop irrigation while neutralising the considerable divergences in flow (annual average, 838 cubic metres/sec., but floods of 5,200 cubic metres).

In the North-East, the highest mountains (2588m, near al-Sulaymāniyya) are associated with the tertiary Zagros folds in Iran, while the Djabal Sindjār which, to the West of Mosul, is an extension of the faulted zone of the Palmyra region, is more closely related to the geological formation of eastern Syria. This mountain mass encroaches on a broad front on the basin of the Tigris which, at the defile of al-Fatḥa, has to cut through the sandstone folds

of the Djabal Ḥamrīn. The higher lands, being very abundantly supplied with water, derive almost no advantage from their rainfall; it is along their damp margins, where the springs also occur, that both cultivation and human beings are concentrated, from the plain of Assyria which is more steppe-like and, around Mosul, is enclosed between the mountains of Sindjār to the West, of Maḳlūb to the East-North-East and of Makḥūl to the South, to the sub-alpine region of Arbīl, Kirkūk and Khāniḳīn, watered by the three affluents of the Tigris—the Great Zāb, the Little Zāb and the Diyālā. This region of traditional agriculture is also rich in oil (oil-fields of Mosul and Kirkūk), and moreover possesses a highly developed system of communications. The Tigris, which between the Assyrian plain and Baghdād falls by 210 m., flows through a valley about 4 km. wide, under several tiers of terraces. At the end, the fall of the river is sufficiently slight, and its current sufficiently powerful (average of 1400 cubic m. per second), to allow navigation on quite a considerable scale, for which purpose rafts on inflated goat-skins are still often employed. But here again, the need to regularize the river and its affluents on account of the extension of irrigated cultivation has given rise to the planning and completion of various dams —the complexes of Sāmarrā —Wādī Tharthār and Balad for the Tigris, Dukān for the Little Zāb, and Derbendī-Khān for the Diyālā.

Southern ʿIrāḳ. The geography of southern ʿIrāḳ with its markedly different character, is wholly dominated by the dynamics of the great rivers. It is here that the powerful rivers flowing down from Iranian Luristan, the Kārūn and the Kerkha, make their appearance and, at the point where they debouch into the plain, they build up a delta which extends across the basin of the Tigris; having already lost much of its force through the warping of the plain that is being practised farther to the North, the Tigris itself then allows its waters to linger in the marshes, mingling in a confused way with part of the waters of the Euphrates. The latter river has in the meanwhile become indisputably the feeblest of the rivers of Mesopotamia. Forced back below Baghdād against the Arabian steppe-land by the thrust of the silt and by various arms of the Tigris, it shifts its course and loses itself in the marshes (regions of Nadjaf, al-Shāmiyyam, al-Shināfiyya and al-Samāwa), from which it emerges only to fall into others, such as the Hor (Khawr) al-Ḥammār, and, through them, into the Tigris. The formation of the land in Lower Mesopotamia is in direct relation to the respective flow of the different rivers, particularly at the time of the annual spring floods: in proportion, the Euphrates brings down as much silt as the Nile, the Tigris four times as much, the Kārūn perhaps even more. Thus a clear indication is given of the dynamics involved, the primary function of the mountains, since the rivers progressively lose their momentum as one goes from North-East to South-West; in contrast to the spent force of the Tigris and especially the Euphrates, it is the alluvial deposits of the Kārūn, amounting to about half a million tons annually, which alone create the bar of the Shaṭṭ al-ʿArab.

The constitution of the soil and its relations with water are directly linked with this hydrographic system, a synonym of both power and confusion. The sediments of the Tigris and Euphrates, in their lower courses where they are under pressure from the Kārūn, now consist solely of very fine mud or clay. As for the depositing of the heavier sediments, which can only take place farther up-stream, it is there compromised by the marshes, the dominant feature of the landscape: at their head is the vast sheet of water and reeds, covering an area 80 km. wide, between al-Ḥammār, al-Ḳurna and Ḳalʿat Ṣāliḥ. This shows that, here more than elsewhere, hydraulics is a vital necessity; in addition to the need for keeping the rivers in their regular channels and for normalizing their flow, it is also necessary to establish considerable reserves, in a country where the low water level corresponds to the driest and hottest period, from the month of May onwards. The whole history of southern ʿIrāḳ is dominated by the memory of the shiftings of rivers from their courses or of devastation, in answer to which man is making efforts to maintain control over the rivers, with for instance the dams at Kūt on the Tigris, and at al-Hindiyya on the Euphrates, and plans for improving the marches.

It is moreover by means of these rivers that one can distinguish two regions in Lower Mesopotamia. In the North, the great plain of yellow clay, caked with salt left by the flood-waters, is in essence pasture-land for camels, with typical steppe vegetation. But sedentary agriculture springs up again in the neighbourhood of the arms of the two rivers, or near canals, even temporary ones, and also, in the event of rain, upon cultivable land of a very precarious sort which for a time has been reclaimed from the steppe. Farther to the South, on the other hand, when the rivers have become slower and before the marshes have invaded the country, there is a somewhat humid region where, thanks to the presence of water at no great depth, cultivation can be practised regularly; the palm tree dominates the region, for a great distance. Beyond that, the reeds and the buffalos are the chief features of the marshes, a zone whore subsistence and habitat are hazardous.

The Shaṭṭ al-ʿArab and the Persian Gulf. Land and sea here together form one single countryside: while the tide can force back the fresh water of the great rivers for a distance of about 200 km. inland, and while the land, thanks to alluvial deposits, continues to expand into the Gulf (an average rate of 25 m. annually), the Gulf itself is merely a scarcely submerged depression, of an everage depth of 25 m. Taken as a whole, the natural conditions prevailing in the Gulf are severe—violent winds from Iran and Mesopotamia, a torrid climate, insecure harbours which face the threat of becoming silted up, navigable channels scarce and dangerous. Nevertheless, the balance is not entirely negative: the Gulf abounds in fish, coral, pearls (favoured by the shallowness of the water), and above all in oil deposits, with the narrow strip of ʿIrāḳī territory being enclosed between the oil-fields of Kuwayt and those of Khūzistān. Finally, it should not be forgotten that the situation of the Gulf, in terms of modern geography, far outweighs the shortcomings of its position: a main channel of important long-distance maritime trade with India and the Far East, the Gulf is in fact an extension of Lower Mesopotamia, with the maritime traffic forming a connection, at al-Baṣra and in the direction of Baghdād, with the railway traffic alongside the Euphrates and also with the river traffic carried on the Tigris.

ʿIrāḳ in the works of the Arab geographers. The physiognomy of the water-courses and canals of ʿIrāḳ in the Muslim Middle Ages has already been examined in the articles BAṬĪḤA, DIDJLA, DIYĀLĀ and FURĀT. Here, only the country itself properly speaking will be described.

ʿIrāḳ which according to al-Muḳaddasī forms part

of the Arab domain, is regarded as the centre of the fourth region, that of Babylon, renowned for its temperate character and the moral or intellectual qualities of its inhabitants. The description is arranged round two main themes, water (the rivers and canals) and the evocation of the capital, whose decline is however emphasised. From the literary point of view, the ʿIrāḳī theme is thus developed on the two levels of panegyric and elegy.

By the term ʿIrāḳ, the Arab geographers in fact meant merely Lower Mesopotamia. The northern part of the present ʿIrāḳ, with some regions belonging to the modern Syria and Turkey, formed part of the Djazīra [*q.v.*]. Being thus delimited, ʿIrāḳ ended in the North in the region of Takrīt on the Tigris, and a little above Hīt on the Euphrates. From there and in a south-easterly direction, the boundary followed the approaches to the steppe, towards ʿAyn al-Tamr, al-Ḳādisiyya, al-Ḥīra and the region to the South of al-Baṣra. Along the mountainous side it mainly followed the present frontier between ʿIrāḳ and Iran, but it extended further to the South, on the left bank of the Shaṭṭ al-ʿArab.

The general features of the country emerge fairly clearly. The climate is given as temperate along the mountain border in the North-East, and often torrid but changeable in the rest of the country, especially in al-Baṣra, caught between the burning winds from the Persian Gulf and winds from the North which temper the effects. In general, however, the worst is the humid hot climate of the Marshes (*Baṭāʾiḥ*), where mosquitoes abound.

Distances are on the whole measured quite correctly: al-Muḳaddasī (134) gives 125 parasangs as the distance from the Gulf to al-Sinn, north of Takrīt, or a little less than 750 km., a distance hardly less, in fact, than the direct line between the mouth of the Shaṭṭ al-ʿArab and the confluence of the Tigris and the little Zāb. For the greatest width, from Ḥulwān, east of Sāmarrā, to the steppe, al-Muḳaddasī gives 80 parasangs, that is about 460 km., a figure covering exactly the distance between the Iranian frontier in the region of al-Sulaymāniyya on the one side and, on a line drawn from al-Sulaymāniyya at right angles to the basin of the Tigris and Euphrates, a point situated on the right bank of the Euphrates, 60 km. inside the Syrian steppe, on the other side.

Great attention is given to the problems concerning water: in al-Baṣra, where water is scarce, it was for some time brought by boat from the nearby town of al-Ubulla. Elsewhere it is provided by the two rivers, their tributaries and the canals, of which the most important are the Nahr al-Isḥāḳī, the Dudjayl, the Nahrawān, the Khāliṣ, the Nahr ʿĪsā, the Nahr Ṣarṣar, the Nahr al-Malik, the Nahr Kūthā and the Nīl.

The most precise account of the territorial divisions is given by al-Muḳaddasī (114-5). According to his system, ʿIrāḳ constitutes a geographical entity, a province (*iḳlīm*), of which Baghdād is the metropolis (*miṣr*). The whole country is split into six regions (*kuwar*, sing. *kūra*) of which the chief towns (*mudun*, sing. *madīna*) are respectively al-Kūfa, al-Baṣra, Wāsiṭ, Baghdād, Ḥulwān and Sāmarrā. This division of the country does not however entirely blur the lines of another division, deriving from the fact that the country was rich enough for uninterrupted cultivation, at least in its central zone, to have earned the name Sawād, the dark land. The units of land for taxation purposes (*ṭasāsīdj*, sing. *ṭassūdj*), made necessary by the introduction of land tax (*kharādj*), generally bear Iranian denominations, evidently earlier than Islam: in al-Muḳaddasī, they are given as Ḥulwān, Shādhḳubādh, Barmāsiyān, Bihḳubādh, al-Awsaṭ, Ardashīr-Bābkān, Shādhshābūr, Shādhbahman, Āstān, Shādhhurmuz and al-Nahrawānāt. The magnitude of the transactions may be gauged incidentally from the openly criticized number of indirect taxes—tolls, dues and taxes on animals, sales and pilgrimages.

Religious geography takes an important place, at least in certain writers: they note the existence of large colonies of Jews or Christians and of survivals of fire worship. The strength of ʿIrāḳī Shīʿism is emphasised, but, reading between the lines (cf. al-Muḳaddasī, 126), one has the impression of the vigilance and vigour of the Sunnīs. In a more general way, the partisan passions and their political background are a characteristic feature, noted in every town of ʿIrāḳ.

There are records of certain wonders (*ʿadjāʾib*) and of the sanctuaries; among the most notable might be included the arch of Ctesiphon (Īwān Kisrā), the ruins of Babylon (Bābil), the burial-places of ʿAlī and Ḥusayn, the remains of al-Ḥīra, of the Sāsānid Dastadjird and of Sāmarrā, the "ashes" of Abraham's fire at Kūthā, and lastly the tombs of saintly personages in al-Kūfa, al-Baṣra and Baghdād.

Under the heading of manners and customs, one invariable theme to be noted is the culture, urbanity and charm of the inhabitants and the undeniable piety of large elements of the population. The chief topic, however, is always commerce, based upon the needs of the towns, and carried on by Baghdād in essential goods. Agriculture concentrated upon the three basic products, cereals, date-palms and fruit, especially grapes; the cultivation of forage-plants, rice and sesame appear less frequently. In the realm of craftwork, al-Baṣra dealt in fine fabrics, luxury articles (pearls and jewels), antimony and litharge, which were exported, as were rose-water, essence of violets and henna, although the most important article of trade remained dates. Baghdād too dealt in luxury products and clothing, but also in dye-stuffs. The Marshes produced matting, Takrīt was known for wool, Wāsiṭ (which also relied on fishing) for hangings, al-Kūfa for essence of violet and turbans, and al-Ubulla for cloth and bricks.

Taken as a whole, the geography of ʿIrāḳ as seen by the writers of the Muslim Middle Ages, far more in human than in physical terms, connected the physiognomy, the life and the destiny of the country with water, the source of its wealth and trade. No author discerned or evoked this phenomenon more successfully than al-Muḳaddasī, the master of this genre in the 4th/10th century. Referring to the Tigris, he wrote (124): "It is a source of profit, thanks to the laden boats which travel up and down the river ceaselessly; upon these vessels, in Baghdād, men arrive, depart, or cross the river, in a deafening tumult. Two-thirds of the charm of Baghdād resides on its river-banks".

ii.—Demography and Ethnography

The alluvial plain of the Tigris and Euphrates in ʿIrāḳ, like that of the Nile in Egypt, could only be extensively cultivated and colonized when techniques of drainage and irrigation were sufficiently advanced in late Neolithic times. Since then, the ethnic history of ʿIrāḳ has been much more troubled and eventful than that of Egypt, partly because the rivers of ʿIrāḳ are less easy to control than the Nile, and partly because the lowlands of ʿIrāḳ are not sealed from invasion, as are those of Egypt, by barren deserts on either side. On the contrary, there is no natural barrier between the irrigated plains of lower ʿIrāḳ and the steppes of the Ḥamad on its one side, and the foothills of the Zagros ranges on its other. In summer, the beduin are attracted from the parched scrubland of the Hamad and Djazīra to the valley-pastures irrigated by the floods of early summer, while in the winter the tribes of the Zagros come down from their high alps to warmer quarters in the riverine plains.

The two main ethnic elements in the lowland population of ʿIrāḳ can be traced to the above two adjacent regions. From the steppe comes the long-headed, in general lightly built 'Mediterranean' stock; from the hills, the broad-headed and taller elements of 'Alpine' ancestry, such as the early Sumerians. A third constituent is the somewhat taller and more aquiline-featured 'Eurafrican' variety of the 'Mediterranean' race, and a fourth would be a 'Negroid' or 'Veddoid' substratum, which Keith confirmed in his brilliant analysis included in Field's classic anthropometric study of 1935 of ʿIrāḳī army recruits. According to the measurements of Buxton, Field and Penniman of the earliest skeletons from Kish and other archaeological sites, the ethnic constitution of the valley population has altered little since the earliest times, except for a possible slight increase in the 'Alpine' element.

In the hill country of the north-east of present-day ʿIrāḳ, the Kurds and allied tribes incorporate two strains, both of tall stature: the long-headed and fair 'Nordic', which doubtless brought in the main features of the language and culture of these people in the second millennium B.C.; and the very broad-headed 'hyper-Alpine' or 'Armenoid', with dark hair, brown eyes and prominent, often aquiline, nose, which is doubtless 'aboriginal' in these mountains. Von Luschan showed that this 'Armenoid' stock is extremely persistent and tends to crystallize into a very homogeneous type in conditions of marked topographic and social isolation, as for example among the Yazīdīs [*q.v.*] of the Sindjar mountains of northern ʿIrāḳ or the Assyrian Christian communities of the Zakho district.

It may be that there is a topographic limit to the successful spread of the 'Eurafrican-Mediterranean' desert stock, for it is remarkable that the Arabic language, the beduin tribal system, and even the characteristic architecture of the steppes cease abruptly at the rise of elevation marked by the Kurdish escarpment of Northern ʿIrāḳ and by the Zagros foothills to the east. Myres, in a perceptive contribution to this problem, suggested that the 'Eurafrican-Mediterranean' stock of the deserts may, on movement to high altitudes, be prone to chest troubles which the indigenous mountain folk are better equipped, through natural selection, to resist.

Throughout recorded history, it is clear that the economic prosperity and, as a corollary, the density of population of the river plains of ʿIrāḳ have fluctuated markedly according as the rivers were controlled and irrigation extended, or alternatively as the dams and canals fell into disrepair and cultivated land reverted to swamp, or at best to seasonal pasture. The Mongol invasions of the 7th/13th century initiated a long period of such decline, during which the plains were largely owned by or held in fealty to the great beduin tribes of the Ḥamad and Djazīra, notably the ʿAnaza and Shammar [*qq.v.*]. The present settled population still widely recognizes its tribal constitution and its allegiances and blood-ties with the beduin communities, and it has been a hard task for successive governments to overcome a long aversion to settled agriculture among substantial and influential elements in the population.

Nevertheless, it is clear from demographic statistics that during the present century, and notably since the Second World War, ʿIrāḳ has entered firmly on a new period of prosperity based on a renovated system of irrigation and a thriving industrial economy. In 1930, the population was calculated at 2.8 millions; in 1943 the figure had reached very nearly 4 millions; in 1950, 4.8; in 1957, 6.3; and in 1965, 8.2 millions. Even allowing for improved techniques of taking the census during this time, there has clearly been a quite remarkable rise in numbers, which can only be accounted for by natural increase.

In the latest census, it is notable that the urban section of the population has become almost as numerous as the rural, doubtless owing in large measure to the increasing importance of the oil business and its ancillary industries. The recent remarkable expansion of the capital city is a phenomenon which is observable in other countries of South-West Asia.

While for long the censuses showed females outnumbering males in the country as a whole, this

situation was reversed in 1965. At present there is a marked concentration of population in the prosperous canal districts around the capital city, and less pronounced clusters in the districts of Baṣra and Mosul. The rivers generally exert an attraction to settlement, though their banks are still by no means uniformly reclaimed to cultivation. The marshes of the lower Euphrates in the district of Samawa, for example, are occupied only by a thin population of 'Marsh-Arabs', distinct in custom and economy. The quite high density of settlement in the mountains of the north-east of the country should be noted, especially around Sulaymāniyya. This is the only part of ʿIrāḳ where the rainfall is adequate for agriculture without the aid of irrigation, and here live the bulk of the Kurdish tribes, estimated to number about threequarters of a million. Less numerous minority groups are the Yazīdis of Sindjar, calculated at nearly 56,000, and the Mandaeans or Christians of St. John, who inhabit a few villages along the banks of the Shaṭṭ al-ʿArab.

Bibliography: F. von Luschan's Huxley Lecture in *J.Anth.I.* xli (1911), 241 ff. is a classic contribution to the Armenoid problem. J. L. Myres, *Who were the Greeks?*, Berkeley 1939, chap. II, esp. pp. 60-65, develops the theme further. L. H. Dudley Buxton's *The Peoples of Asia*, 1925, chap. 4, is a useful basic statement. Henry Field has made many authoritative contributions to the subject, notably: *Arabs of Central Iraq* ... (Field Mus. Nat. Hist., Anthrop. Mem. 4, Chicago 1935); *The Arabs of Iraq*, in *Am. Journ. Phys. Anthrop.*, xxi (1936), 49-56; *Mountain peoples of Iraq and Iran*, *ibid.* N. S. ix (1951), 472-5; *The Anthropology of Iraq*, Pt. I, Chicago; Pt. II, Camb. (Mass), 1951-2; and *Ancient and Modern Man in Southwestern Asia*, Miami 1956. Sir Arthur Keith's incisive contributions are included in Field's study of 1935 of *Arabs of Central Iraq* ... (see above) and in Bertram Thomas's *Arabia Felix*, New York 1932, App. I, 301-33. Chap. 4 of W. C. Brice, *South-West Asia*, London 1966, deals with ethnology. Statistics of population are given in the annual Government Statistical Abstract. (W. C. BRICE)

iii.—HISTORY: (a) ANCIENT HISTORY [see BAKR B. WĀʾIL, AL-ḤĪRA, ĪWĀN, LAKHMIDS, AL-MADĀʾIN, NABAṬ, AL-UBULLA, etc.]

(b) FROM THE ARAB CONQUEST TO 1258

ʿIrāḳ, a fertile rich region from very early times, had attracted some Arab groups before the appearance of Islam. The Christian Lakhmids [*q.v.*] had settled around al-Ḥīra [*q.v.*] as early as the 3rd century, and had been entrusted by the Sāsānids with the task of defending the territory of Mesopotamia from any possible incursions by the Byzantines or their allies. In the 6th century, moreover, certain tribes from central Arabia, the Taghlib and the Bakr b. Wāʾil [*q.v.*], as a result of economic difficulties not fully known to us, left their original home-land for the steppes of the Lower Euphrates, to be followed by some members of the Tamīm [*q.v.*]; they even began to move upstream, establishing themselves between the territories controlled by the Lakhmids in Mesopotamia and those ruled by the Kinda [*q.v.*] in northern Arabia; some of them appear at that time to have been converted to Christianity.

The conquest of ʿIrāḳ, which Muḥammad may or may not have already had in mind when he started to enter into relations with the Arab tribes who were established in that country, was begun during the caliphate of ʿUmar [*q.v.*].

When Arabia had been entirely pacified through the efforts of Abū Bakr, Khālid b. al-Walīd [*q.v.*], after putting an end to the Ridda [*q.v.*], is said to have been invited by a leader of the Bakr, al-Muthannā b. Ḥāritha, a recent convert to Islam, to come and join him in invading the fertile lands of ʿIrāḳ. It was in the spring or summer of 12/633 that Khālid appeared with a small force outside al-Ḥīra, which surrendered rapidly. But operations became slower when, in 13/634, Khālid was sent to the Syrian front, leaving the Muslims under the command of al-Muthannā. A war of skirmishes, with various incidents, then followed for some months between the Muslims and the Persians; defeated at the "battle of the Bridge", al-Muthannā won a victory in the following year at Bawayh, but he died soon afterwards. And it was a new leader, Saʿd b. Abī Waḳḳāṣ [*q.v.*], a former Companion, who in the spring of 16/637 had to face the attack launched by the Sāsānid general Rustam: the decisive battle, which lasted three days and three nights and in the course of which the Muslims encountered forces two or three times as numerous as their own, took place at al-Ḳādisiyya [*q.v.*], 30 km south-east of al-Ḥīra. The victory finally won by the Muslims opened ʿIrāḳ to them. They began by pillaging Ctesiphon, then occupied the whole of the country whose inhabitants, being of Aramaic origin, seem to have welcomed the conquerors, semitic-speaking like themselves, without displeasure. The fortified camp of al-Baṣra [*q.v.*], on the Shaṭṭ al-ʿArab, was established in 17/638, subsequently being gradually improved and strengthened, while the camp of al-Kūfa [*q.v.*], to the south of the modern Baghdād but also on the right bank of the Euphrates, was established in 17 or 18/639, and was destined to constitute the new capital of ʿIrāḳ, replacing Ctesiphon, the site of which was abandoned and which gradually lost its inhabitants. The final conquest of ʿIrāḳ was assured by the victory at Nihāwand (21/642) which opened the Iranian territories to the Muslim troops. Al-Baṣra and al-Kūfa, now entrusted to separate governors, became true towns. It was in the neighbourhood of al-Baṣra that ʿAlī fought with and defeated his opponents at what is known as the battle of the Camel, in 36/656 [see AL-DJAMAL]. Later, it was at al-Kūfa that ʿAlī held his court during the conflict in which he opposed, on the one hand, Muʿāwiya, and on the other, the Khāridjis, whom he crushed at al-Nahrawān [*q.v.*] in 38/658; it was there also that ʿAlī was assassinated by Ibn Muldjam [*q.v.*] in 40/661.

The triumph of Muʿāwiya, the governor of Syria, and the appearance of the Umayyad dynasty together resulted in Syria being given pre-eminence over ʿIrāḳ, although ʿIrāḳ at that time was a richer and more populous region whose inhabitants were perhaps more experienced than the Syrians in the problem of administration and government that confronted a great empire.

In the time of Muʿāwiya, ʿIrāḳ had a single governor in the person of Ziyād [*q.v.*] who, after being first appointed governor of al-Baṣra in 45/665, ruled the whole province from 50/670 until his death in 53/673. In 55/675, his son ʿUbayd Allāh b. Ziyād [*q.v.*] continued his work. It was he who was in part responsible for the death of al-Ḥusayn [*q.v.*] at Karbalāʾ [*q.v.*] in 61/680, at the beginning of the reign of the caliph Yazīd [*q.v.*].

The years that followed were marked by the revolt of the anti-caliph ʿAbd Allāh b. al-Zubayr [*q.v.*] who

had the support of the majority of the inhabitants of al-Kūfa and al-Baṣra (the Tamīm in particular). ʿIrāḳ was then entrusted to Muṣʿab b. al-Zubayr [*q.v.*]. His primary task was to oppose the revolt of al-Mukhtār [*q.v.*] which began in 66/686 and which was repressed some months later in 67/687 [see ḤARŪRĀʾ], and he himself died shortly afterwards in a battle against the armies of ʿAbd al-Malik [*q.v.*]. In 72/691, the Umayyads re-established their authority over ʿIrāḳ. However, in view of the hostility of the Khāridjīs who did not disarm, the caliph in 75/694 entrusted al-Ḥadjdjādj [*q.v.*] with the governorship of al-Kūfa. It was at this period that al-Ḥadjdjādj, after restoring discipline in the ʿIrāḳī forces commanded by al-Muhallab [*q.v.*], and then crushing the revolt of Ibn al-Ashʿath [*q.v.*] who had occupied al-Baṣra and al-Kūfa, founded the new town of Wāsiṭ [*q.v.*] in 83/702. During the same period, the administrative and monetary reforms of ʿAbd al-Malik came into force, as a result of which new coins were minted at Wāsiṭ; the period also brought to light a grave problem, the abandonment of holdings of land by agricultural workers converted to Islam, who refused to continue to pay the same taxes as they had done before their conversion [see KHARĀDJ]. Rivalries between tribes manifested themselves in ʿIrāḳ, as in Syria; while al-Ḥadjdjādj supported Ḳays [*q.v.*], one of his successors, Yazīd b. al-Muhallab [*q.v.*], persecuted them until he was imprisoned by order of the caliph ʿUmar b. ʿAbd al-ʿAzīz [*q.v.*]; escaping from prison, Yazīd stirred up a rebellion which was crushed in 102/721 by the Umayyad prince Maslama [*q.v.*], to whom incidentally credit is due for the reclamation of new marsh lands close to the Shaṭṭ al-ʿArab [see AL-BAṬĪḤA]. Order in ʿIrāḳ was restored in the time of the caliph Hishām [*q.v.*], under the governorship of Khālid b. ʿAbd Allāh al-Ḳasrī [*q.v.*], later executed in the time of al-Walīd II [*q.v.*]. The end of the Umayyad epoch was marked by increasing troubles, due to the turbulence both of the ʿAbbāsid faction and also of the Khāridjīs who for some time occupied al-Kūfa. The governor Ibn Hubayra [*q.v.*] was unable to oppose the invasion by ʿAbbāsid troops; besieged in Wāsiṭ, he finally surrendered after the defeat of the Umayyad armies, in return for a promised safe-conduct which was not respected.

On the coming of the ʿAbbāsid dynasty, the capital of the empire was established in ʿIrāḳ, first in al-Kūfa, later in the new town of Baghdād [*q.v.*]; in consequence, this province and its inhabitants were given increased importance, while the appearance of the towns was transformed: al-Kūfa gradually lost its inhabitants to Baghdād, which grew even larger, until the time when the caliph's court was established in Sāmarrāʾ [*q.v.*], between 221/836 and 278/872.

During the early period of the ʿAbbāsid caliphate ʿIrāḳ underwent a remarkable economic development. It became the centre of trade for the whole Orient [see TIDJĀRA], and at the same time an intellectual and artistic centre [see *infra*], the meeting place of poets and men of letters, jurisconsults, traditionists, theologians and scholars [see also ʿARABIYYA: Literature; FIḲH, ḤADĪTH, KALĀM, and the articles on the sciences]. The region nevertheless suffered from disturbances of varying seriousness—ʿAlid revolts in the al-Baṣra region in 145/762 [see BĀKHAMRĀ], then in al-Kūfa in 199-200/815-6 [see IBN ṬABĀṬABĀ], a civil war between al-Amīn [*q.v.*] and al-Maʾmūn [*q.v.*] and the siege of Baghdād in 196-8/812-3, the mutiny of the Turkish officers in Sāmarrāʾ, leading to a second siege of Baghdād in 251/865-6 [see AL-MUSTAʿĪN], the slaves' revolt, known as the revolt of the Zandj [*q.v.*] in the plantations in Lower ʿIrāḳ (255-70/869-83), periodic raids by the so-called Ḳarmaṭian [*q.v.*] bands; all these were incidents testifying to a political, religious and social instability disquieting for the government. These disturbances were all the more distressing to the caliphate in that ʿIrāḳ then constituted one of the richest regions of the empire; the taxes levied on the lands of the *Sawād*—the name currently given to ʿIrāḳ—normally furnished a very substantial part of the Treasury's revenues, a circumstance which explains why, at the beginning of the 4th/10th century, the viziers were almost always chosen from the financiers who were expert in fiscal matters and who had already had occasion, before their accession to the vizierate, to resolve the delicate problems generally raised by the calculation of taxes in this region. From the time of the caliphate of al-Mahdī, incidentally, the collection of these taxes was made on the principle of a proportional advance payment in kind.

The nomination by the caliph al-Rāḍī [*q.v.*] of an *amīr al-umarāʾ* in the person of Ibn Rāʾiḳ [*q.v.*] opened a new era which extended from 336/945 until 447/1055, in the course of which ʿIrāḳ, still disturbed by dissensions and military campaigns which impaired its agricultural prosperity, ceased to be the centre of the empire and became merely a single region in the political complex controlled by the Buwayhid *amīrs* [*q.v.*]. The Shīʿī, probably Imāmī, convictions of these *amīrs* led them to favour the celebration of Shīʿī festivals [see MUḤARRAM] and to have mausolea erected or reconstructed on the tombs of *imāms* then existing in ʿIrāḳ [see MASHHAD]. But this policy met with opposition from the Sunnī elements in the population and soon also from the caliph himself [see AL-ḲĀDIR]. Moreover, the tax concessions granted to the *amīrs* on the so-called *kharādj* [*q.v.*] lands did not improve the situation of the agricultural workers, upon whom the wealth of the region partly depended.

In ʿIrāḳ, which for a time was disturbed by the episode of the pro-Fāṭimid revolt of al-Basāsīrī [*q.v.*], the arrival of the Saldjūḳs [*q.v.*] established until the Mongol invasion a new régime essentially characterized by its efforts to restore Sunnism. But this tendency did not pass without disagreements, on the one hand between the caliphs and the sultans, who had incidentally made Iṣfahān their capital, or on the other hand without new dissensions between Shāfiʿīs won over to Ashʿarism and Ḥanbalīs [see AL-SHĀFIʿĪ, AL-ASHʿARIYYA, AL-ḤANĀBILA], the former being officially favoured by the Saldjūḳ sultans through the medium of the teachers appointed in the new *madrasa* known as the Niẓāmiyya (founded in 459/1067) [see MADRASA]. The Saldjūḳs continued to dominate ʿIrāḳ in the 6th/12th century, but their empire was then rapidly disintegrating. The branch which established an autonomous principality in ʿIrāḳ went back to Maḥmūd b. Muḥammad [*q.v.*], nephew of Sandjar, who came to power in 511/1118. This branch remained there until the coming of the Khwārazmshāhs [*q.v.*] in 590/1194; but already by this time the authority of the Saldjūḳ *amīrs* of ʿIrāḳ had been attacked by the ʿAbbāsid caliphs who were attempting to shake off their tutelage. As a consequence, there were struggles for influence, the most serious taking place in the reign of the sultan Masʿūd [*q.v.*], and they brought about the execution of the caliph al-Mustarshid [*q.v.*] in 529/1135 and of the caliph al-Rashīd [*q.v.*] in 530/1136, and the accession of al-Muḳtafī [*q.v.*], chosen by the sultan. However, the sultans'

power declined continuously, and the caliph al-Nāṣir [*q.v.*], who reigned from 575/1180 to 622/1225, even distinguished himself by trying to develop in the principal Sunnī States in the East the organization of the *futuwwa* [*q.v.*], which seemed to him the best method of reestablishing, under his own direction, the moral and political unity of the old ʿAbbāsid empire. The undertaking did not however have the expected success, and the ʿAbbāsid caliphs ceased to dominate ʿIrāḳ when the Mongols conquered the country in 656/1258 [see AL-MUSTAʿṢIM].

Bibliography: No history of ʿIrāḳ for the period under consideration exists. See the articles indicated in the text, particularly with reference to the dynasties, caliphs, sultans, governors and also the towns. For the episodes of the conquest, see F. Gabrieli, *Muḥammad and the conquests of Islam*, London 1968, 118-26 and bibl., 245.

(c) 1258-1534

The period extending from the Mongol conquest to the Ottoman conquest does not reveal any unity, unless it be in emphasising, by the rapid succession of dynasties, that, with the disappearance of the Caliphate, ʿIrāḳ entered a period of political decline which was to last until after the 16th century, and witnessed the intensification of an economic decline which reached one of its lowest points in the 15th century, the process of this decline being still insufficiently understood. The period of about three centuries covering the Mongol (Īlkhānids, Djalāyirids, Tīmūrids) and Turcoman rulers (Ḳara-Ḳoyunlus, Aḳ-Ḳoyunlus, Ṣafawids) has not been the subject of any comprehensive study; detailed works on historical geography, the administrative system, and social and economic structures are inadequate, and the political history has been only relatively better reconstructed. Extracts from the most important sources are grouped chronologically in ʿAbbās al-ʿAzzāwī, *Taʾrīkh al-ʿIrāḳ bayn iḥtilālayn*, i-iii (and iv), Baghdād 1935 sqq. The principal sources are, for the Īlkhānid period, the works of Ibn al-Fuwaṭī [*q.v.*]; for the Ḳara- and Aḳ-Ḳoyunlu period the *Taʾrīkh al-Ghiyāth* (unpublished) and Abū Bakr Ṭihrānī, *Tārīkh-i Diyārbakriyya*, ed. Faruk Sümer, 2 vol., Ankara 1962-4.

Under the Īlkhāns [*q.v.*], although it had fallen into the status of a provincial capital, Baghdād still retained a certain intellectual and religious lustre, but was the seat of a government which ruled only Lower Mesopotamia, while Upper Mesopotamia was governed from al-Mawṣil [*q.v.*]. This division of ʿIrāḳ into two large, distinct and frequently rival administrative units was to be maintained until the Ottoman occupation. Like the other regions of the Īlkhānid empire, the ʿIrāḳi provinces had at their head a Mongol governor (disparate and incomplete lists in Spuler, *Die Mongolen in Iran*, 348-52), assisted by a non-Mongol *nāʾib*, a senior Muslim, Christian or Jewish official, generally a member of one of the viziral coteries who struggled for influence in the Ordo. Baghdād and southern Irāḳ were held in this manner for twenty years by the group of Khurāsānian administrators whom the Djuwaynīs controlled. After the disgrace of the latter, the social tensions which became apparent throughout the whole Īlkhānid State were complicated in ʿIrāḳ by the presence of numerous Christian and Jewish communities and when the Mongol sovereigns, converted to Islam, vaunted their religious opinions because of the aspirations of Shīʿite circles.

At the time of the dismemberment which followed the death of the Īlkhān Abū Saʿid (735/1335), the provinces of ʿIrāḳ at first remained within the Mongol orbit, but Ḥasan Djalāyir, though faithful to the legitimate succession of the Djengizkhanids until the end of his life (1356), nevertheless is known as the founder of a dynasty. Having established themselves in Baghdād, the Djalāyirids [*q.v.*] succeeded in ousting their Čubānid [*q.v.*] rivals and in extending their authority over Upper Mesopotamia. However, with its two capitals, Baghdād and Tabrīz, their State was more Persian than Arab. After Timur's first campaign in ʿIrāḳ (795/1393), a route march punctuated by various halts at places where there was urban resistance, there followed periods of shortlived Tīmūrid domination (796/1393-4, 804/1401-2, 806-7/1403-5) and Djalāyirid restorations in which the equivocal support of the Ḳara-Ḳoyunlu Turcomans played the essential part and foreshadowed their domination in the 15th century. The sack of Baghdād by Tīmūr in 803/1401 (cf. *Arabica*, ix/2 (1962), 303-9), dealt the already declining capital a blow from which it was never to recover. In fact, tribalism (Bedouins in the South, Turcomans and Kurds in the North) from then onwards completed the disorganization of the economy and drove away to the routes through Persia and Anatolia the caravan traffic between the Persian Gulf, the Black Sea and the Mediterranean. It was a lifeless region that, after the Djalāyirid dynasty were dispossessed (1410-11), the Ḳara-Ḳoyunlu were to dispute for two decades (1411-31) with their successors who had been driven back into the southern districts (Khūzistān, Baṣra, al-Ḥilla). The political fragmentation became more pronounced, not only on account of rivalries between Turcoman federations but also as a result of the fact (illustrating the lack of historical unity of a country traditionally divided into distinct zones) that rulers of Baghdād and rulers of al-Mawṣil were in armed competition, and that the politico-religious movement of the Mushaʿshaʿ [*q.v.*] took over from the last Djalāyirids in Lower ʿIrāḳ, and, while it there blocked attempts at expansion by the Tīmūrids of Fārs, also safeguarded the country from Turkmen tutelage. The only native movement of sufficient vigour to challenge the authority of the Turcomans, the Mushaʿshaʿ revolt remained limited and, despite the difficulties of its opponents, it did not succeed in capturing Baghdād; even al-Ḥilla was occupied for only a short time (1466-8). Under the Aḳ-Ḳoyunlu

who supplanted (1468-9) the Ḳara-Ḳoyunlu, the condition of ʿIrāḳ was less turbulent. They maintained themselves there for some years after their eviction from Iran by the Ṣafawid Ḳîzîlbash.

The Ṣafawid domination of ʿIrāḳ (1508-34) was characterized, there as elsewhere, by economic stagnation and by feeble central government. Upper Mesopotamia remained within the orbit of the Mawṣillu *amīrs*, who had already been powerful there in the time of the Aḳ-Ḳoyunlu; by securing for themselves authority to govern Baghdād, they assured themselves in fact of control of the whole of ʿIrāḳ. At the beginning of the reign of the young Shāh Ṭahmāsp I, one of them, Dhu 'l-Fiḳār, even attempted to secede (1528-9).

(d) The Ottoman Period

The ʿIrāḳī territories from the early 10th/16th to the early 19th century were primarily a bastion of Ottoman power against not only the rulers of Persia, but also the refractory Kurds in the north-east and the Arab tribesmen to the west and south-west of the Tigris-Euphrates plain. In contrast to the western Fertile Crescent, which was conquered in a single campaign in 922/1516 and was never until the late 18th century seriously threatened by an external enemy, the ʿIrāḳī territories were acquired piecemeal, lost and retaken, and held over a long period only by an extensive concession of autonomy to the governors of Baghdād. The 19th century witnessed here, as elsewhere in the Ottoman Empire, a phase of administrative reorganization.

The first Ottoman acquisitions (Mosul, Diyār Bakr [*q.v.*] and the Kurdish regions east of the Tigris) were obtained in 921-3/1515-7 in the sequel of the Čāldirān [*q.v.*] campaign. The renewal of hostilities between Sultan Süleymān and Shāh Ṭahmāsp resulted in the Ottoman capture of Baghdād [*q.v.*] in 941/1534. The Arab dynast of al-Baṣra [*q.v.*], Rāshid b. Mughāmis, became a vassal of the sultan, and his territory was later (after 953/1546) fully incorporated in the Ottoman Empire. ʿIrāḳ comprised the three central *eyālet*s of Mosul, Baghdād and al-Baṣra, with the Kurdish *eyālet* of Shahrizor to the east, and the *eyālet* of al-Ḥasā [*q.v.*] on the western coast of the Persian Gulf [see baḥr fāris]. The *eyālet* of Diyār Bakr, although lying outside modern ʿIrāḳ, was closely associated with its history in the Ottoman period.

As elsewhere in the Empire, the weakening of central control in the 11th/17th and 12th/18th centuries was reflected in the ʿIrāḳī provinces in the rise of local despotisms and the domination of the garrison-troops in the towns. The governorship of al-Baṣra, purchased (c. 1021/1612) by a certain Afrāsiyāb [*q.v.*], became hereditary in his family. Another gubernatorial family ruled in al-Ḥasā from the late 10th/16th century until c. 1074/1663-4. The garrison-troops of Baghdād, by this time a privileged and powerful section of the urban community, produced a faction-leader, Bakr Ṣū Bāshī [*q.v.*], who, in order to consolidate his position, negotiated with Shāh ʿAbbās [*q.v.*]. Baghdād and central ʿIrāḳ thus passed under Persian rule (1033/1623), but the Ṣafawids failed to hold Mosul and Shahrizor. The Persians were finally ejected from Baghdād by Sultan Murād IV in 1048/1638. The ensuing Ottoman-Ṣafawid settlement (the Treaty of Zuhāb) indicated the border between the two powers (14 Muḥarram 1049/17 May 1639). It was to be reaffirmed after subsequent hostilities until the 19th century.

The Ottoman reconquest brought no lasting stability. The garrison-troops of Baghdād continued to be turbulent and insubordinate. Although the autonomy of the house of Afrāsiyāb in al-Baṣra was finally suppressed in 1078/1668, the rise of the Muntafiḳ confederacy of the marsh and desert Arabs of the south threatened Ottoman control. This was restored by two governors of Baghdād, Ḥasan Pasha [*q.v.*], who ruled from 1116/1704 to 1136/1724, and his son and successor, Aḥmad Pasha [*q.v.*], who ruled (with a brief interval) until his own death in 1160/1747. Their authority, like that of other powerful Ottoman governors of the period, rested on a new military and administrative basis. Georgian by origin, Ḥasan and Aḥmad established in Baghdād a Georgian *mamlūk* household, through which they controlled and administered their province. In consequence of the threat from the Muntafiḳ, al-Baṣra became in effect a dependency of Baghdād. A more serious danger appeared in the years following 1135/1722, when first the Afghans, then Nādir Shāh, succeeded the Ṣafawids as masters of Persia, and hostilities with the Ottomans were reopened. The key importance of Baghdād in the ensuing campaigns partly explains the acquiescence of the sultanate in the prolonged tenure of power and autonomous position of Aḥmad Pasha. It was at this time also that members of the Djalīlī [*q.v.*] family established themselves as quasi-hereditary governors of Mosul. Baghdād was besieged by Nādir in 1146-7/1733, and Mosul in 1156/1743, but the long struggle as a whole was indecisive, and the settlement of 1159/1746 merely confirmed the Treaty of Zuhāb.

On Aḥmad Pasha's death, shortly after that of Nādir Shāh (1160/1747), his Mamlūk household was firmly entrenched in power, and formed a self-perpetuating military and administrative élite. The Mamlūks were able to thwart the attempts of the sultan's government to displace them, but failed to develop a regular system of succession to the governorship. The period of the Mamlūk Pashalic (1160-1247/1747-1831) witnessed a clash with the Persian ruler, Karīm Khān-i Zand, and the temporary loss of al-Baṣra (1190-3/1776-9), but the danger passed with Karīm Khān's death. The long rule of Büyük Süleymān Pasha (1194-1217/1780-1802), who governed Baghdād together with al-Baṣra and Shahrizor, marked the apogee of the Mamlūk Pashalic, but his later years were preoccupied with unsuccessful attempts to curb the expansion of the Wahhābīs into al-Ḥasā and the fringes of ʿIrāḳ, where they were resisted by the Muntafiḳ confederacy. The great Wahhābī raid of 1216/1802 and the sack of Karbalāʾ showed the impotence of the Mamlūk Pashalic in this respect. It survived, however, until Sultan Maḥmūd II succeeded by force of arms in ousting Dāwūd Pasha [*q.v.*] and ending the autonomous governorship (1831).

Ottoman administrative reform and increasing European penetration are the principal themes in the history of ʿIrāḳ from 1831 to 1918. Dāwūd's immediate successors were no more effective than the Mamlūk pashas in enforcing their authority upon the tribes. The real turning-point came with the governorship of Midḥat Pasha (1869-72), which saw the application to Baghdād of the Law of *Wilāyet*s (1864) and the Ottoman Land Law (1858). Both of these were westernizing reforms, one creating the framework of a provincial administration of European type, the other establishing individual freehold ownership in tribal lands. Sultan ʿAbd al-Ḥamīd II brought extensive estates in ʿIrāḳ under his private

Seniyye administration. The emergence of Arab nationalism in the Young Turk period was less evident in the ʿIrāḳī than the Syrian provinces, although some nationalists (chiefly army officers) came from this region.

Until the 19th century, the ʿIrāḳī region, apart from the coast-lands of the Persian Gulf, attracted little European attention. By the later 18th century, the British had superseded the Dutch (as earlier had the Dutch the Portuguese) as the dominant European power in the Gulf. From 1763 al-Baṣra was the centre of British trade and the seat of an agency of the East India Company. Bag̲h̲dād itself was of secondary importance to the British until Bonaparte's expedition to Egypt, but in 1798 a permanent British resident was appointed there. Interest in the development of communications with India led to surveys of the Euphrates route in the 1830's, and to the beginning of modern river-transport in ʿIrāḳ. Telegraphic communications followed after 1861, when Istanbul was linked with Bag̲h̲dād. The German-sponsored project of a railway from Anatolia to the Persian Gulf was resisted by the British government, and only the line from Bag̲h̲dād to Sāmarrā was constructed under Ottoman rule.

At the outbreak of the First World War, European political and economic penetration of ʿIrāḳ was still very limited. In November 1914 an expeditionary force from India occupied the head of the Gulf and al-Baṣra. A first attempt to capture Bag̲h̲dād ended with the surrender of the British at Kūt al-Amāra in April 1916, but a second advance succeeded in taking the city in March 1917. Mosul, however, held out until after the armistice of Mudros ended Ottoman participation in the war. Meanwhile an administration, mainly composed of British and Indian officials, had been established in the occupied ʿIrāḳī territory, and formed a transition to the formal assumption of British responsibility for the country under the Mandate of 1920.

Bibliography: For detailed bibliographies, see the articles referred to above, especially BAG̲H̲DĀD, and also the principal modern works: ʿAbbās al-ʿAzzāwī, *Taʾrīk̲h̲ al-ʿIrāḳ bayn iḥtilālayn*, iv-viii, Bag̲h̲dād 1949-58; S. H. Longrigg, *Four centuries of modern Iraq*, Oxford 1925 (repr. London 1969); idem, *ʿIraq 1900 to 1950*, London 1953; A. T. Wilson, *The Persian Gulf*, London 1928. (P. M. HOLT)

(e) SINCE 1918

By 1918 the British occupation of present-day ʿIrāḳ was completed, when British forces entered Mosul in November, seven days after the signing of the Mudros Armistice between Turkey and the Allies. However, the contradictory attitudes of British official opinion regarding the political future of the conquered territory caused administrative confusion and led to the rise of anti-British nationalist agitation for the establishment of a Muslim Arab state in the country. When the Mandate over ʿIrāḳ was awarded to Great Britain in 1920, it sparked off an insurrection led by the tribal s̲h̲ayk̲h̲s of the Middle Euphrates and fomented by the S̲h̲īʿī *mud̲j̲tahid*s of Nad̲j̲af and Karbalāʾ, the pacification of which required considerable forces and was completed early in 1921. The suppression of the insurrection was preceded by the appointment of Sir Percy Cox as British High Commissioner, who set up an Arab Council of State to perform the functions of government, thus ending military rule in October 1920. In March 1921 the Cairo conference was held under the presidency of Winston Churchill, the Colonial Secretary. In dealing with the situation in ʿIrāḳ the conference resolved to offer the rulership of the country to Fayṣal, the second son of S̲h̲arīf Ḥusayn of Mecca, who had been ousted from Syria in July 1920 by the French. The choice of Fayṣal as King of ʿIrāḳ was approved by the Council of State and confirmed in a referendum, and he was crowned in August 1921 as a constitutional monarch with a representative and democratic government [see DUSTŪR, 659]. ʿIrāḳ's relation with the mandatory power was regulated by a series of treaties, the last of which was signed in 1930 and gave ʿIrāḳ formal independence and provided for a close Anglo-Iraqi alliance to last 25 years. Thus in 1932 ʿIrāḳ was admitted to the League of Nations as an independent sovereign state.

When ʿIrāḳ became independent, the country had not attained the social cohesion among its various religious and ethnic groups necessary to make a modern nation. There were too many disruptive local forces representing the various conflicting interests. To control and harness these interests for the good of the state required wise leadership and the ability to strike a balance between the British and the nationalists on the one hand, and the different nationalist groupings on the other. Fayṣal succeeded in maintaining such an equilibrium, and his sudden death in 1933 was an irreparable loss. It came at a very troubled period in ʿIrāḳ's modern history, when the Assyrian massacre, tribal uprisings and strong anti-British agitation threatened the very foundations of the new state. G̲h̲āzī, Fayṣal's successor, was inexperienced and lacked the authority of his father to maintain political stability. He was drawn to take sides in the turbulent and faction-ridden politics of ʿIrāḳ. While certain groups were inciting tribal rebellions to displace their rivals from power, others sought the cooperation of army officers to obtain political power. Thus in 1936 a military coup was carried out by General Bakr Ṣidḳī in collusion with Ḥikmat Sulaymān and supported by the reformist political group known as *al-Ahālī*. The movement ended within ten months as it began, in another coup. The military intervention in politics set a dangerous precedent, as the country witnessed no fewer than seven coups in the period between 1936-41. In this period anti-British nationalist feeling, aided and abetted by the Axis Powers and influenced by British policy in Palestine, facilitated the rise of the pro-Nazi régime of Ras̲h̲īd ʿĀlī al-Gaylānī, which seized power in April 1941 and proceeded to disregard ʿIrāḳ's obligation under the Anglo-Iraqi treaty of 1930. This led to the occupation of Bag̲h̲dād by the British-led Arab Legion of Jordan in May 1941. Following the suppression of the Gaylānī régime and the restoration of constitutional rule, the Iraqi political leader Nūrī al-Saʿīd emerged as the strong man of subsequent cabinets. In 1943 ʿIrāḳ declared war on the Axis powers and thus became qualified as a charter member of the United Nations Organization, and in 1945 ʿIrāḳ was a founder member of the Arab League of States. The end of the war saw a revival of political activities in the country, when political parties were allowed to operate freely. Several parties came into being, all representing the politically aspiring groups of the intelligentsia. All these political organizations demanded the abolition of the Anglo-Iraqi Treaty and called on workers and students to support their demands. Student demonstrations and industrial troubles led to the suppression of these parties.

The early 1950s saw an increase in ʿIrāḳ's oil revenues, which were channelled towards long-term development programmes like the building of irrigation dams. The failure of these projects to yield rapid economic advancement caused wide-spread discontent and reinforced the ranks of the opposition. The emergence of a new and radical leadership in Egypt enhanced the opposition groups in ʿIrāḳ, who continued their campaign against the treaty with Great Britain. Instead they advocated neutralism and an alliance with Egypt. ʿIrāḳ, however, in the fcce of strong opposition at home and in the Arab world, joined the Baghdad Pact, the Western-inspired defence system, in 1955, and expressed lukewarm support for Egypt during the Suez crisis of 1956. Egypt's diplomatic triumph and the rise of ʿAbd al-Nāṣir as an Arab national figure marked a turning-point in the history of royalist ʿIrāḳ. When Syria and Egypt merged to form the United Arab Republic in 1958, ʿIrāḳ and Jordan were federated under a Hās͟himite Crown. In July the monarchy was overthrown by a group of army officers under the leadership of Brigadier ʿAbd al-Karīm Ḳāsim, who declared a republic. Ḳāsim enjoyed the support of a wide coalition of political and other interests representing the fragmented social structure of Iraqi society. The coalition lacked cohesion and it disintegrated a few months later. For almost five years Ḳāsim attempted to hold a balance between the contending factions of military and civilian groupings. Under his régime ʿIrāḳ withdrew from the Baghdad Pact and the sterling area, and established diplomatic relations with all the communist countries. Ḳāsim was overthrown in February 1963. His legacy was the complete factionalization of ʿIrāḳ's internal politics, the alienation of ʿIrāḳ in the Arab world, and a Kurdish rebellion. He was succeeded by a régime representing the pan-Arab Baʿt͟h party, which was ousted by President ʿAbd al-Salām ʿĀrif only seven months after it had assumed power. ʿĀrif was killed in an air crash in 1966 and was succeeded by his brother ʿAbd al-Raḥmān, who was in turn overthrown by a group of army officers, a coup that led to the return of the Baʿt͟h Party to power in 1968.

iv.—Languages

The official language of ʿIrāḳ is Arabic [see ʿarabiyya]. But on the one hand the Arabic-speaking area is not at all homogeneous, and on the other hand some Iranian dialects are still much alive, in particular Kurdish, to which recent agreements have accorded an official status in Kurdistan.

(a) Arabic Dialects

Two distinct dialect types, representing a variant of the Pan-Arabic division into *qāl* dialects and *gāl* dialects, coexist in the Mesopotamian area. They may be called *qiltu* dialects and *gilit* dialects, using the 1st pers. sing. of the perfect of the verb 'to say' to highlight three of their distinctive features: the reflexes of Old Arabic *q*, the shape of the suffix, and the degree of segholization. The division is partly regional, partly social: *qiltu* dialects are spoken by the sedentary populations North of a line Sāmarrā-Fallūd͟ja, and by non-Muslim sedentaries South of that line; *gilit* dialects are spoken by nomadic, semi-nomadic and Beduinized populations everywhere, and by Muslim sedentaries South of the aforesaid line. The *qiltu* dialects are closely akin to the Arabic spoken in Eastern Anatolia (provs. of Mardin, Diyarbakır, Siirt and Urfa), whereas the *gilit* dialects extend into Kuwayt, the Persian Gulf and Khuzistan; they also bear some resemblance to the dialects of Nad͟jd and to those of Uzbekistan. The kindred dialects spoken by relatively recent immigrants from Nad͟jd, such as the S͟hammar and ʿAnaza tribes, are here left out of account.

A good deal of reliable material has, in the past decade, become available on the dialect of the Baghdad Muslims (hereafter, MB) but of the other *gilit* dialects, only that of Kwēriš, prov. of al-Ḥilla, (hereafter Kw.) has received detailed treatment (see the bibliography), though material on al-Ḥilla, al-ʿAfač and al-Baṣra has recently become available. Of the *qiltu* dialects, Jewish Baghdadi (JB) and Christian Baghdadi (CB) have been described in some detail, while the dialect of Mosul (Mo.) is less well-known, and there are only a few scattered notes on ʿĀna, Tikrīt and Hīt.

Phonology. The *qiltu* dialects are characterized by *q* for OA *q* (*qāl* 'he said', *qām* 'he rose', *bāq* 'he stole') and by *k* for OA *k* (*kān* 'he was', *kalb* 'a dog', *ḥaka* 'he spoke') though ʿĀna has *č* in these and some other items. The *gilit* dialects have *g* for OA *q* (*gāl, gām, bāg*) though MB has *q* in a good many instances (*qira* 'he read', *buqa* 'he remained', *qibal* 'he accepted') and *ğ* in a few cases (*rifiğ* 'companion', *šarği*/*šarqi* 'Eastern'); and *č* for OA *k* in many cases (*čibīr* 'big', but *kbār* 'big, pl.', *čān* 'he was', but *ykūn* 'he will be', *čalbak* 'your (m.s.) dog', *čalbič* 'your (f. s.) dog'); MB contrasts with the rural *gilit* dialects as to the amount of affrication: MB *akil* 'food', *gāʿid* 'sitting', vs. Kw. *ačil*, *ğāʿid*. The Southernmost *gilit* dialects have *y* for OA *ğ*. Most of the *qiltu* dialects (Mo., CB, JB, Tikrīt) have *ġ* for OA *r* in many instances (*ġās* 'head'). They also have, again with the exception of *ʿāna*, a strong *imāla* (Mo. and CB *bēġid* 'cold', JB *bīżid*) whereas the *gilit* dialects, especially MB, tend toward a low, central and even back *ā* in all positions. A few dialects of both types preserve older *ay* and *aw*, but these are more generally represented by *ē* and *ō*, rather mid than high, with, for *ē*, a characteristic positional variant [ie] in Baghdad and other Southern dialects. Older *i* and *u* are represented by a single *i* phoneme, usually heard as a mid central rounded [ə], in the *qiltu* dialects (*kill* 'all', *kinna* 'we were', *kētib* 'writing', *wēqif* 'standing') whereas MB has both *i* and *u*, though they have been redistributed (*kull, činna, kātib, wāguf*). The fate of short *a* is extremely complex; it does not, on the whole, follow the *qiltu-gilit* split, except in the case illustrated by MB *ğimal* 'camel', *guṃar* 'moon' vs. Mo. *ʿġamal, qamaġ*. The *gilit* dialects show practically universal segholization, the quality of the epenthetic vowel varying with environment: *čalib* 'dog', *darub* 'way', *xubuz* 'bread', *baʿad* 'still'; the *qiltu* dialects vary in degree of segholization, the most conservative, such as JB, having practically none: *kalb, daġb, xibz, baʿd*. Common to all dialects, except CB, is the retention of the interdentals Θ, δ and δ̣, the frequent occurrence (esp. in the *gilit* group) of the emphatic *ḷ*, and the new phonemes *č* and *g*, even in the *qiltu* group; a new phoneme *p* is well established at least in the urban dialects of both types.

Morphology. The pronominal suffixes character-

istic of the *qiltu* group are illustrated below by the Mosul paradigm, those of the *gilit* group by MB, using the words for 'brother' and 'house':

	Mosul		MB	
1s.	aḫūyi	bēti	aḫūya	bēti
2ms.	aḫūk	bētak	aḫūk	bētak
2fs.	aḫūki	bētki	aḫūč	bētič
3ms.	aḫūnu	bētu	aḫū	bēta
3fs.	aḫūha	bēta	aḫūha	bētha
1p.	aḫūna	bētna	aḫūna	bētna
2p.	aḫūkim	bētkim	aḫūkum	bētkum
3p.	aḫūhim	bētim	aḫūhum	bēthum

The nominal fem. suff. varies between *i* (or *e*) and *a* in the *qiltu* group, but is a stable *a* in the *gilit* group: Mo. *kalbi* 'bitch' (for some speakers, *kalbe*), *bēḍa* 'egg' (JB *kalba, bēḍi*), MB *čalba, bēḍa*. In annexation and with suffixes, this suffix has different allomorphs in the two groups: Mo. *kalbit aḫūyi, kalbiti, kalbitna*, vs. MB *čalbat aḫūya, čalibti, čalbatna*. Common to the area are plural patterns of the type *ksāla* (MB), *kasāli* (Mo.) 'lazy', for adjectives in *-ān*, and *ḫyāyiṭ* (MB), *ḫayīyīṭ* (Mo.) 'tailors' for *qattāl* nouns. Feminines of adjectives of colours and infirmity end in a long, stressed vowel in the *qiltu* group, a short vowel in the *gilit* group: Mo. *sōdā* 'black', *ʿamyā* 'blind', vs. MB *sōda, ʿamya*. In the verb, the usual ten form classes occur, with form IV rather sparsely represented. Form I has a single pattern *qital/qutal* (the alternation depending on the environment) in the *gilit* group, *e.g.*, *kitab* 'he wrote' vs. *ṭubaḫ* 'he cooked', a single *qatal* pattern in some *qiltu* dialects, while others have the common twofold *qatal* vs. *qitil*, *e.g.*, Mo. *katab* 'he wrote' vs. *širib* 'he drank'. Conjugation of the form I perfect and imperfect is illustrated by the Mosul paradigm (*qatal* only) and the MB paradigm respectively:

	Mosul		MB	
1s.	katabtu	aktib	kitábit	aktib
2ms.	katábit	tiktib	kitábit	tiktib
2fs.	katabti	tkitbīn	kitabti	tkitbīn
3ms.	katab	yiktib	kitab	yiktib
3fs.	kátabit	tiktib	kitbat	tiktib
1p.	katabna	niktib	kitabna	niktib
2p.	katabtim	tkitbūn	katabtu	tkitbūn
3p.	katabu	ykitbūn	kitbaw	ykitbūn

The *-ūn* forms of the imperfect are characteristic of the whole area, as well as Eastern Anatolia, Northern Arabia and Uzbekistan. The rural *gilit* dialects (and some speakers of MB) maintain a gender distinction in the 2nd and 3rd pers. pl. both in the verb and in the object pron. suff.; the distinction is absent in the *qiltu* group. A present indicative marker (*e.g.*, Mo. *qa-*, MB *da-*) occurs in most dialects.

Syntax. Indeterminate nouns are, over much of the area, often marked by a morpheme derived from OA *fard* (MB *fadd, farid*). Determinate direct objects are, with varying regularity in the different dialects, marked by an anticipatory pron. suff. plus *l-*, *e.g.*, MB *šifta laḫūk* 'I saw your brother'. Also of frequent occurrence in the area are constructions of the type *walad izzēn* 'the good boy', *i.e.*, a sort of construct phrase replacing the determinate noun plus adjective phrase. Peculiar to CB, though it occurs also in Eastern Anatolia, is the use of a postposed copula, *e.g.*, *hāda šiġlak yānu* 'that's your business'. Negation is marked by *ma-* without postposed *š*, by *la-* in negative imperative.

Vocabulary. Many items are characteristic of the area as a whole; they include a large number of Turkish and Persian loans. The following sampling is in MB unless otherwise indicated: *ādmi* 'person, individual', *ūti* 'flatiron', *bazzūn(a)* 'cat', *bāg* 'to steal', *bībi* 'grandmother', *tufga* 'rifle', *timman* 'rice', *ǧrēdi* 'rat', *čārak* 'one-fourth', *čatal* 'fork', *ḥalig* 'mouth', *ḥunṭa* 'wheat', *ḫašim* 'nose', *ḫašūga* 'spoon' *ḫital* 'to hide (intr.)', *ḫōš* 'good', *dazz* 'to send' *δabb* 'to throw', *δaṃṃ* 'to hide (trans.)', *ʿagrugga* 'frog', *ḳašmar* 'to trick', *gubba* 'room', *gadda* 'to beg for alms', *lāḫ, luḫ* 'another' (*ṃarrt illuḫ* 'again'), *mēz* 'table', *mēwa* 'fruit', *niṭa* (Mo. *ṭaʿa*) 'to give', *hdūm* (Mo. *ḥwās*) 'clothes', *hāyša* 'cow'. Among particles, note *aku* 'there is', neg. *māku*, the possessive marker *māl*, and such adverbs as *ham* 'also', *hwāya* 'much, many' (Mo. *kΘīġ*, Southern *wāǧid*), *hnā(ya)* 'here' (Mo. *hōni*), *hnāka* 'there' (Mo. *hōnik, hnūka*), *hīči* 'thus' (Mo. *hākiδ*), *lbārḥa* 'yesterday' (Mo. *mbēḥa*), *bāčir* 'tomorrow' (Mo. *ġada*), the interrogatives *minu* 'who', *š-*, *šinu* 'what' (Mo. *aš-*), *šlōn* 'how' (Mo. *ašlōn*), *wēn* 'where' (Mo. *ēṣab*). Among characteristic interjections are *ī, bali* 'yes', *ašū* (observation of accomplished fact: *ašū ǧēt* 'so here you are'), *xō* (implying hope or concern: *ḫō ma tʾaδδēt* 'you didn't get hurt, I hope?'), *yēzi* 'that's enough'.

(H. Blanc)

(b) Iranian dialects

Although Persian is spoken by large communities in the holy cities of the Shīʿa, Karbalāʾ, Kāẓimayn and Nadjaf, the main Iranian language of ʿIrāḳ is Kurdish. Almost the entire population of the *liwāʾ*s of Sulaymāniyya and Arbīl and half that of Kirkūk is Kurdish, speaking Central Kurdish dialects. In Mosul *liwāʾ*, the Bahdīnānī dialect of Northern Kurdish is spoken in the *nāḥiya*s of ʿAḳra, ʿAmādiyya, Duhōk and Zākhū, and a related dialect is

used by the Yazīdīs of Sind̲j̲ār. Southern Kurdish dialects are represented in the K̲h̲ānaḳīn and Mandalī areas of Diyālā. [See KURDS, Language].

Two other Iranian languages, often erroneously classed as Kurdish, are Gūrānī and Lurī. The former is represented in ʿIrāḳ by the Bād̲j̲alānī dialects [see BĀD̲J̲ALĀN] and the Hawrāmī spoken in a few villages near the Persian border north of the R. Sīrwān [see HAWRĀMĀN; GŪRĀN, Language]. Lurī, the most closely related to Modern Persian of all Iranian languages, is spoken by the Fayliyya, best known as porters in Bag̲h̲dād.

v.—ARABIC LITERATURE

The history of literary activity in ʿIrāḳ is closely connected with the history of the caliphate, in the sense that Arabic literature, which had been almost exclusively ʿIrāḳī both under the Umayyads (although Damascus was their capital) and also under the ʿAbbāsid caliphs during the period when they were the real rulers of the empire, began to be dispersed as soon as more or less independent dynasties became established in various provinces. Since literary production, in the strict sense, was dependent on the one hand on patronage, in respect of poetry, and on the other on the existence of administrative departments which employed *kuttāb* as far as prose is concerned, the pre-eminence of ʿIrāḳ suffered as soon as poets of talent began to look for patrons at the provincial courts and when the most talented scribes placed themselves at the service of the local rulers. A further point to be noted is the emigration to the West, and to Muslim Spain in particular, of writers and scholars of all disciplines as soon as the politico-religious situation appeared to be dangerous. Thus it can be said that from the 4th/10th century onwards ʿIrāḳ, although still at the head, was increasingly rivalled by the other provinces of the empire; the decline which had already started was accentuated still more under the Sald̲j̲ūḳids, and the capture of Bag̲h̲dād by the Mongols dealt a mortal blow to Arab culture in ʿIrāḳ. There then began a long period of obscurity, which was to end in the 19th century; incidentally, ʿIrāḳ merely followed, somewhat tardily, the *Nahḍa* of the countries on the shores of the eastern Mediterranean, but after the second world war it embarked upon a deliberately revolutionary course.

Even in the pre-Islamic period Arabic poetry was practised in ʿIrāḳ, especially in al-Ḥīra [*q.v.*], where an Arab dynasty, the Lak̲h̲mids [*q.v.*], attracted poets who were natives of Arabia, for example al-Nābig̲h̲a al-D̲h̲ubyānī, or encouraged the flowering of local talents, particularly among the Christians, of whom ʿAdī b. Zayd al-ʿIbādī was outstanding. To judge by fragments considered to be authentic, the poetry which flourished at al-Ḥīra was one of town life, with the inevitable panegyrics but also with bacchic themes which seem to have been characteristic. The end of the Lak̲h̲mid dynasty (A. D. 602), soon followed by the preaching of Islam, seriously checked this poetic activity, but the founding of Baṣra [*q.v.*] and Kūfa [*q.v.*] made Lower Mesopotamia into an Arab colony, with the establishment of tribal elements coming principally from central and eastern Arabia; Arabization took place rapidly and, although the Persian captives composed no poems at that time, at least the newly sedentarized Bedouins are found maintaining pre-Islamic tradition by reciting verses on the battlefield or on occasions of importance in the life of the newly-founded cities, and orators began to deliver discourses defending and glorifying their new country; religious and political eloquence was practised in the mosques, and it is remarkable that the most admired specimens of the art of oratory in the 1st/7th century are in fact orations delivered from the pulpits of ʿIrāḳ [see AL-ḤAD̲J̲D̲J̲ĀD̲J̲; ZIYĀD]. Fragments of poetry or oratory preserved in the mainly later anthologies are extremely suspect, but nevertheless they correspond to a profound reality and reveal that the art of eloquence, the speciality of the Arabs, remained the constant preoccupation of the populations of the new colonies; and although they show that the desert tradition was preserved, yet in certain easily discernible features they also mark a development which was to continue for several centuries.

In the second half of the 1st/7th century, the poetry produced in Baṣra and Kūfa adhered to the traditional settings and themes, but tended to follow various orientations. Although the court of Damascus attracted a considerable number of poets, the Umayyad governors of ʿIrāḳ and some great aristocratic families, practising a new type of patronage, encouraged the panegyric poetry still produced by Bedouins brought up in the desert but now tempted by the variety of opportunities offered by large cities. It is probably not by chance that in this category are the great poets of the 1st century—al-Farazdaḳ, D̲j̲arīr, al-Ak̲h̲ṭal, as well as al-Rāʿī, D̲h̲u 'l-Rumma and many others of less renown. The Mirbaḍ of Baṣra, the meeting-place for caravans, was also a platform where the best poets came to submit their compositions to a public of connoisseurs; the upholders of the poetic tradition among peoples still close to their Bedouin origins, these poets took part in contests, competing with each other in boastfulness, but gradually they succeeded in going beyond the tribal setting and in playing a wider political role.

More distinct in character is the activity of a group of poets who, while following the tradition of *hid̲j̲āʾ* and *madīḥ* [*qq.v.*], endeavoured to defend or attack not a tribe or a tribal chief but a specific politico-religious group. In fact the divergencies which, especially after Ṣiffīn [*q.v.*], led to a schism among the Muslims and gave rise to bloody conflicts, are echoed in the writings of poets who were supporters of the ʿAlids (al-Aʿs̲h̲ā of Hamdān; al-Kumayt; Kut̲h̲ayyir ʿAzza, etc.) or the K̲h̲ārid̲j̲īs (ʿImrān b. Ḥiṭṭān; al-Ṭirimmāḥ, etc.); their common hostility to the Umayyads has, as its corollary, the praising of the chiefs followed by these men, for whom poetry retained something of its magic character; and it is not uncommon, in such poetry as has survived, to detect an epic quality which makes us regret the loss of the greater part of this literary output which was, for once, inspired by sincere sentiments. There are still almost no non-Arabs to be found among the poets of talent, but perhaps it is as such, although his true origin has not been established, that Ibn Mufarrig̲h̲ should be regarded; the implacable enemy of the sons of Ziyād, he was already a member of the band of *mawālī* who were soon to challenge the Arabs successfully in a field in which the latter claimed to be unrivalled.

The bacchic tradition of al-Ḥīra was maintained, particularly by Ḥārit̲h̲a b. Badr al-G̲h̲udānī, but although erotic subjects were in no way neglected, there was still nothing in ʿIrāḳ comparable with the love poetry which flourished during the same period in

the towns of the Ḥidjāz; and it was only with al-ᶜAbbās b. al-Aḥnaf (d. in about 190/805) that the Ḥidjāz tradition penetrated into ᶜIrāḳ. On the other hand, al-Aghlab al-ᶜIdjlī of Kūfa is credited with the invention of the *urdjūza* [*q.v.*], which was practised with some success by his compatriot Abu ʾl-Nadjm, and by al-ᶜAdjdjādj and his son Ruʾba, of Baṣra. For the town-dwelling poets of ᶜIrāḳ, works in *radjaz* subsequently offered a means of proving that they were acquainted with the life and vocabulary of the Bedouins, before the *urdjūza* became the favourite form of didactic poetry.

In comparison with the pre-Islamic poetic tradition (at least, as one may imagine it to have been), the changes are thus not very spectacular. However, panegyric writing was henceforth addressed to personages who were no longer necessarily tribal chiefs; political and religious themes—though outside the bounds of orthodoxy—assumed a new importance, *hidjāʾ* began to take the form of short epigrams and, although the traditional forms were for the most part respected, some shorter works characterized a transition to a poetry less closely linked with the classical *ḳaṣīda*.

In a more general way, this first period of intellecual life in ᶜIrāḳ, the end of which coincided with the disappearance of the great Umayyad poets and the close of the true *ᶜarabiyya* as defined by the lexicographers, was a period of adaptation to the new conditions of life for the Arabs settled in ᶜIrāḳ, and of cultural adaptation for the foreign elements absorbed by Islam. In fact, it was this period which saw the beginnings of the development, in both Baṣra and Kūfa, of that Arabo-Islamic culture which was later to embrace the whole of the Muslim world and the assertion of ᶜIrāḳ in all fields of intellectual activity, even though the political centre of the empire was still in Syria.

It is not possible here to describe the part played by ᶜIrāḳ in the elaboration of the religious sciences; in a related sphere, however, it should be noted that grammar, in which the pioneer was probably ᶜAbd Allāh b. Abī Isḥāḳ (d. 117/735), was an ᶜIrāḳī field of study and remained so. Moreover, it was in ᶜIrāḳ that the main lexicographical and philological investigations were undertaken, work which, together with the systematic collection of ancient verse, proverbs and traditions of a more or less historical character, was to inspire a crowd of scholars or of *ruwāt* [see RĀWĪ], among whom Abū ᶜAmr ibn al-ᶜAlāʾ (d. about 154/771), al-Aṣmaᶜī (d. 213/828) and Abū ᶜUbayda (d. 209/824) became well-known a little later, as did many others. The documents thus collected together were to constitute the principal foundation of literary culture, *adab* [*q.v.*], the origin of which must likewise be placed in ᶜIrāḳ.

The coming to power of the ᶜAbbāsids merely accentuated the lead already taken by ᶜIrāḳ in the intellectual sphere, by providing the poets and men of letters of that country and of the other regions of the empire with an opportunity to display their talent before these enlightened patrons. After the founding of Baghdād, the two metropolitan cities of Baṣra and Kūfa, whose literary activity was greater and more diversified than in the Ḥidjāz, Syria or Egypt, for a time retained the position they had succeeded in attaining, but they soon came to play a less prominent part, merely supplying the new capital with an élite who were assured of finding fame and fortune there. From the second half of the 2nd/8th century there were indeed very few Kūfans or Baṣrans who, through modesty, fear or lack of ambition, did not at least try their luck in Baghdād. In this way a rivalry came into being which produced the most fortunate results for the development of literature.

Another phenomenon also accompanied the transfer of the centre of the empire to ᶜIrāḳ—the introduction of the *mawālī* [*q.v.*] not only to Arab culture but also to belles-lettres. A number of ᶜIrāḳī Muslims of non-Arab origin had indeed already held a controlling part in the offices in the administration which, from the earliest time, had been a forcing-ground for men of letters; but a sort of democratization of culture, together with a more or less openly avowed desire to supplant the Arabs, considerably increased the numbers of these *mawālī* who, having been brought up to use the Arabic language and possessing no other means of expression, adopted their conquerors' idiom and composed poetry and prose with felicity.

Imbued with the Arab poetic tradition, these *mawālī* willingly sacrificed to custom and, when occasion required, wrote panegyrics which the Bedouin poets would not have rejected; but they tended to impose a "modernistic" poetry, characterized by the abandonment of classical forms and the adoption of themes consonant with the new way of life of the Muslims. The *Kitāb al-Aghānī*, which devotes a very large part to ᶜIrāḳī writing, contains instructive notices on poets of Baṣra or Kūfa who are regarded as minor authors by literary criticism, perhaps because they failed to respect the traditional rules, but who nevertheless deserve lasting attention, since they expressed sincere sentiments, in language of great simplicity, and at times did not scruple to hurl biting invective, the originality of which is unfortunately too often exceeded by its obscenity. All this work, which would, since it is true poetry, repay serious study, has in general been neglected because the specialists in Arabic literature, being influenced by Arab critics, have devoted more attention to the most celebrated "modernists" who without neglecting the traditional forms, are clearly distinguished from their predecessors by their avowed desire for originality. Among these, reference is generally made to Bashshār b. Burd (d. 167/783-4), of Baṣra, who excelled in satire and erotic poetry, and to Abū Nuwās (d. about 200/816), whose name is linked with bacchic poetry; yet he won distinction by his treatment of erotic themes and, in addition, expressed man's anguish when confronted with the unknown in death, in the so-called "ascetic" poems (*zuhdiyyāt*), in which his contemporary Abu ʾl-ᶜAtāhiya (d. about 213/823) was to make himself famous. In such of his work as still survives, the last-named author utters banal truths, rather than any profound religious sentiment, and it is remarkable that in that century the Islamic religion still inspired very few poets, whilst a Bashshār or an Abū Nuwās did not hesitate to show scepticism with regard to Islam, and sometimes even to resort to sacrilege, with the glorification of their ancestors and their religion; this attitude, which led to their being ranked among the *zindīḳ*s [*q.v.*] or the Shuᶜūbiyya [*q.v.*] and at times involved them in certain difficulties, in no way impaired their reputation.

On the other hand, the Shīᶜis possessed a politico-religious poetry, devoted to the praise of the Ahl al-Bayt [*q.v.*], and in particular of ᶜAlī b. Abī Ṭālib and of his son al-Ḥusayn, whose martyrdom became a frequent theme. Among the most celebrated Shīᶜī poets, literary criticism has recognized al-Sayyid al-Ḥimyarī (d. 171/787-8) and Diᶜbil (d. 246/860) in particular, but research has until now been in-

complete and needs to be supplemented, despite the difficulties of the task arising from the disappearance of a large proportion of this political poetry and from the numerous interpolations made during later periods.

Although the evolution of poetry during the period in question is of undeniable importance, the fact which must be equally emphasized is the establishment of Arabo-Islamic culture and the accompanying development of Arabic prose; it is no exaggeration to say that Arabic literature, which hitherto had consisted almost exclusively of poetry, entered a new phase as soon as it was felt that prose lent itself better than verse to the expression of thought, however rudimentary, and that this new instrument deserved being taken into consideration; from that time, one has the impression that an equilibrium was reached and that the balance tended to incline towards prose.

In this field also the influence of Persia was decisive; and if the creation of the epistolary genre, at the end of the Umayyad period, is to be attributed to ʿAbd al-Ḥamīd b. Yaḥyā, it was naturally enough in ʿIrāḳ that this genre was to attain some measure of perfection, so long as the ʿAbbāsids of Bag͟hdād held power and employed *kuttāb* (who incidentally were mainly non-Arab); thanks to the *risāla* [*q.v.*], derived from the official letter, the genre was even to constitute the essential feature of prose literature.

It was a *kātib* of the caliphate, Ibn al-Muḳaffaʿ (d. about 139/757), who with his translation of *Kalīla wa-Dimna* and his own writings in fact created Arabic prose, both didactic and entertaining, by introducing into literature *adab* of the Sāsānid type, whose purpose was the moral and so to speak "professional" instruction of the rulers and the people. The apologues of *Kalīla wa-Dimna* inspired only one imitation by another Persian *kātib*, Sahl b. Hārūn (d. 244/858), but the *adab* of Ibn al-Muḳaffaʿ, supplemented by elements of Persian origin, introduced to the ʿIrāḳis by translations from the Pahlavi, for a long time was to feed *adab* works of edification and popular encyclopaedias, first in ʿIrāḳ and then in the other countries of the Arab world. Shortly after Ibn al-Muḳaffaʿ, translations from the Greek reached Bag͟hdād or were even made in the Bayt al-Ḥikma [*q.v.*] of the capital, and they inspired the *mutakallimūn* [*q.v.*] and later the *falāsifa* [*q.v.*], while also providing *adab* with certain new maxims.

One activity which cannot be emphasized too strongly is that of the *ruwāt*, who, coming after the generation which had devoted itself to collecting the elements of the Arab "humanities", started to classify this vast documentation in a series of monographs, a surprisingly rich inventory of which is provided by the *Fihrist*; after al-Aṣmaʿī, Abū ʿUbayda and their colleagues, Abu 'l-Ḥasan al-Madāʾinī (d. after 215/830), whose true influence it would be interesting to be able to assess, made available to later generations (though in a still obscure form despite the evident care he gave to classification) an enormous mass of information, traditions, verse, etc., derived from material collected among the Arab tribes.

It fell to al-D̲j̲āḥiẓ (d. 255/868) to apply critical study to this documentary material, in order to draw from it the necessary elements to constitute a large-scale, clear literary culture, to reject the legendary features and to indicate the methods by which it could be developed by reflexion, research and experiment. Al-D̲j̲āḥiẓ described himself as a *rāwī*, but nevertheless he was more than that, for although in the *Bayān* or the *Ḥayawān* he limited himself to quoting traditions, he treated ethical *adab* in a more personal manner, which already amounted to a psychological analysis of qualities of character and a portrayal of society. His work, which should have marked a transition or stage, was in fact regarded as an end in itself by his admirers, or as a kind of betrayal of the Muslim ideal by his detractors, who endeavoured to lead culture and prose literature back to something more utilitarian and more compatible with the requirements of the average Muslim. Although al-D̲j̲āḥiẓ had a remote successor in the person of Abū Ḥayyān al-Tawḥīdī (d. 414/1023), he was supplanted, shortly after the collapse of the Muʿtazilite movement, by a *faḳīh*, Ibn Ḳutayba (d. 276/889), who brought a methodical and disciplined intellect to the service of a more restricted and a less dangerous culture, one in which the religion and inheritance of the Arabs formed a coherent whole, open to the greatest numbers but preventing any kind of access into the outside world. Ibn Ḳutayba's *adab*, represented by the *ʿUyūn al-ak͟hbār*, the *Kitāb al-Maʿārif* and the *Kitāb al-S͟hiʿr wa 'l-s͟huʿarāʾ*, is composed mainly of quotations and traditional material, the greater part of which was to pass into later literature and to contribute largely to the popular encyclopaedias. The literary *adab*, made fashionable by al-D̲j̲āḥiẓ and systematized by Ibn Ḳutayba, was still represented by works such as the *Kāmil* of al-Mubarrad (d. 285/898), before declining into the anthologies of verse and prose, of which the *Muwas͟hs͟hā* of al-Was͟hs͟hāʾ, which concentrates on the traditions relating to the dandies of Bag͟hdād, is a typical and relatively original example.

While the works here referred to have survived, for they conformed with the tastes of a clientèle which enjoyed short traditional accounts that were easy to memorize and to introduce into conversation, only a few very inadequate fragments are left from what was no doubt a more original literature, although still a subsidiary branch of *riwāya*, of erudition; to judge by the *Fihrist*, which records a considerable number of titles, it included true romances of love and adventure, burlesques (mostly obscene), and collections of amusing anecdotes, and in short was a purely recreative literature in which imagination played a certain part. But no doubt as a result of a reaction among pietist circles, these works very soon ceased to be copied and merely made their way, in the form of extracts, into later collections where the lack of references makes identification impossible. However, the dual aspect of *adab*, as both diversion and instruction, can be seen also in a number or works of an intentionally serious character, such as *al-Farad̲j̲ baʿd al-s͟hidda* of al-Tanūk͟hī (d. 384/944), which combines proverbs, anecdotes, various traditions and narrative accounts mainly related by *ḳāḍīs*, on the theme of "relaxation after tension". It is probably significant that it was in ʿIrāḳ that the first stories of the "Thousand and one nights" [see ALF LAYLA WA-LAYLA] were collected together.

The *Fihrist* (written in 377/987-8) makes it possible to evaluate the richness of Arabic literature in Bag͟hdād towards the end of the 4th/10th century, even allowing for the fact that the book-sellers of the capital may also have sold works written in other countries; in order to estimate the number of works, it would be necessary to reproduce a summary of this invaluable catalogue, a reading of which inspires the greatest admiration for the work of the scholars, writers and poets of ʿIrāḳ. The *Fihrist* also shows that, although the philologists and *ruwāt* of the early centuries deserve the merit

of collecting and transmitting the greater part of what we know of the Arab heritage, it was also the ʿIrāḳis who set themselves the task of reconstituting the *dīwāns* of the ancient, the classical and the modernistic poets, and it is quite certain that this erudite work had the most far-reaching consequences on the development of Arabic poetry in ʿIrāḳ and elsewhere; perhaps even it immediately favoured the neo-classicism which followed the modernism. In fact, the modernist movement was only short-lived, and the triumph of Persian influence was far from conclusive since, as early as the end of the 2nd/8th century, the first manifestations of a reaction made their appearance, a reaction characterized by the return to classical forms and the use of more carefully chosen language than that of the modernists, and of more complex rhetorical figures of speech; the *mawālī* themselves did not hesitate to plunge into neo-classicism, since the earliest representative of the movement, Muslim b. al-Walīd (d. 187/803), was a *mawlā* and his successors, Abū Tammām (d. 231/845), Ibn al-Rūmī (d. 283/896), al-Buḥturī (d. 284/897) and Ibn al-Muʿtazz (d. 294/907), were not all pure Arabs. These poets were finally to incorporate the thematic contributions of modernism in the traditional forms.

Neo-classicism, which originated in ʿIrāḳ, was soon to spread elsewhere, and to be cultivated with even greater success in other regions of the Muslim world, from the time when Bag̲h̲dād was no longer its sole, undisputed capital and when the provincial courts attracted the greatest talents; the most celebrated representative of this type of poetry, al-Mutanabbī (d. 354/965), became famous principally in Aleppo, and many others stayed only very briefly in Bag̲h̲dād. The decay of the Caliphate consequently brought with it a decline of ʿIrāḳī poetry, but the impression remains that the poets of ʿIrāḳ, among whom there was no longer any outstandingly great name, tended to fall back on themselves and to produce a more personal, more lyrical and perhaps more sincere poetry. One of them, Ibn al-Ḥad̲j̲d̲j̲ād̲j̲ (d. 391/1001), represents this tendency very clearly, although his work is marred by its intolerable obscenity.

In the field of prose, it was probably towards the end of the 4th/10th century that Muḥammad b. Aḥmad Abu 'l-Muṭahhar al-Azdī, inspired by al-D̲j̲āḥiẓ, created a new genre by delineating in his *Ḥikāya* a satirical picture of life and manners in Bag̲h̲dād, but his innovation, though very successful, produced no sequel. During the same period the scribes of the Būyid chancellery customarily used rhymed prose in the epistolary style and made fashionable an original literary genre, the *maḳāma* [*q.v.*]; but al-Hamad̲h̲ānī was not an ʿIrāḳī, and although one of his most illustrious successors, al-Ḥarīrī (d. 516/1122) was a Baṣran, his "Sessions", through the very mass of their lexicographical erudition, bear the stamp of a period when philology was one of the principal preoccupations of men of letters.

In the meanwhile, the Sald̲j̲ūḳid Turks had captured Bag̲h̲dād (447/1055) and, being anxious to return to strict orthodoxy, had founded the *madrasa* [*q.v.*], the aim of which was to reinvigorate orthodox teaching and thereby to restore the so-called Arabic sciences to a place of honour; thus the *madrasa* tended to favour a very enclosed form of culture, which inclined towards grammar. rhetoric and the learning by heart of works by ancient writers which could no longer be understood save with the help of a commentary.The study of ʿIrāḳī poetry under the Sald̲j̲ūḳids brings to light the existence of a considerable number of minor poets; from among them, it is possible to single out Ibn al-Habbāriyya (d. about 509/1115), who lived in the entourage of Niẓām al-Mulk and, in addition to panegyrics and satires in a style reminiscent of that of Ibn al-Ḥad̲j̲d̲j̲ād̲j̲, also produced a versified collection of fables, *al-Ṣādiḥ wa 'l-bāg̲h̲im*, and al-Ṭug̲h̲rāʾī (d. about 515/1121), whose reputation is based on the *Lāmiyyat al-ʿAd̲j̲am*—a poem with a revealing title.

The decline, which had been clearly noticeable from the 4th/10th century, became more marked after the capture of Bag̲h̲dād by the Mongols (656/1258), and Arab literature, which everywhere was in decay, from then onwards underwent a long period of eclipse in ʿIrāḳ. Faced with the dangerous challenge of Persian and Turkish, Arabic culture took refuge further to the West and, although some ʿIrāḳīs are to be found among the prose-writers and poets, their writings for the most part were produced outside their own country. In prose, there is no outstanding work to be noted, while in poetry the increasingly marked divison between classical and dialectal Arabic led to the almost exclusive use of traditional clichés and rhetorical figures of speech for the expression of ideas which themselves were lacking in inspiration. Perhaps it was in order to challenge this atrophy of classical poetry that the ʿIrāḳīs, who gave so much to Muslim Spain, now followed the example of that country by adopting or creating some popular poetic forms (*zad̲j̲al*, *mawāliyā*, *dūbayt*, *kān wa-kān*, *ḳūmā*, *muwas̲h̲s̲h̲aḥ*), upon which Ṣafī al-Dīn al-Ḥillī (d. about 750/1349) throws some light in *al-ʿĀṭil al-ḥālī wa 'l-muraḳ̲h̲ḳ̲h̲aṣ al-g̲h̲ālī* (ed. Hoenerbach, Wiesbaden 1956); this same poet, who is probably the most remarkable during the whole of this long period (of which incidentally not a great deal is known), placed himself among the neo-classical writers and, as was done elsewhere, wrote poems in honour of the Prophet (which shows how uninviting the current topics were), but he also reveals a marked liking for popular poetry and the use of slang words, something which seems to be quite characteristic of ʿIrāḳ.

In the Ottoman period (941/1543-1918), literary output was negligible, and it was only at the end of the 19th century that the old capital of the empire took a place, however modest, in the modern renaissance, thanks to poets like al-Zahāwī (1863-1936) and Maʿrūf al-Ruṣāfī (1875-1945); however, although ʿIrāḳ did at last, after an understandable delay, join in the literary and dramatic movement, the persistence of popular poetry in dialectal Arabic is one of the most curious phenomena of the present period.

It is still too early to judge the ʿIrāḳī literature which has developed particularly since the second world war, but it should be noted that although in comparison with other Arabic-speaking countries ʿIrāḳ seems to show a slight backwardness, it nevertheless remains true that ʿIrāḳ is in general manifesting original and specific tendencies, which will perhaps enable the country to play again such a part as it held in the early days of Islam, at a time when attention was directed first towards Baṣra and Kūfa, and then towards Bag̲h̲dād.

vi.—The Sects

At a very early date, immediately after the conquest of the country which was embarked upon during the caliphate of Abū Bakr (11/632-13/634) and completed during that of ʿUmar (13/634-23/644), ʿIrāḳ became the scene of violent clashes among the various parties which were contending for power. From the reign of the caliph ʿUthmān (23/644-33/655), a party in opposition to the caliph and the Umayyads came into being in ʿIrāḳ, and particularly in Kūfa, one of their most energetic military leaders being al-Ashtar [*q.v.*]. At the time of the revolt which ended in Medina with the assassination of the caliph ʿUthmān, according to certain traditions al-Ashtar brought from Kūfa a contingent of two hundred men who joined the rebels who had come from Egypt; he himself ranks as one of the "besiegers of the House" (*nuffār*) and sometimes even as one of the caliph's murderers.

Under the caliphate of ʿAlī b. Abī Ṭālib (35/656-40/661), ʿIrāḳ was for a time the stake of a new seccession, between the Ḥidjāz which for the most part favoured ʿAlī, and Syria where Muʿāwiya had succeeded in gaining recognition. ʿĀ'isha, Ṭalḥa and al-Zubayr, who had succeeded in winning over Baṣra to their cause, came into conflict with ʿAlī near that town, in the famous battle of the Camel (*al-Djamal* [*q.v.*]) on 15 Djumādā II 36/9 December 656. Ṭalḥa and al-Zubayr perished in this confused battle, while the former wife of the Prophet had to return to Medina under a strong escort.

After the inconclusive encounter at Ṣiffīn [*q.v.*], the acceptance by ʿAlī of the arbitration (*taḥkīm*) proposed by Muʿāwiya in 37/657 was the starting point for the establishment of a new Muslim sect, that of the Khawāridj [*q.v.*], whose origins, like their history, are still extremely obscure. The seccession extended to Ḥarūrā; the speech which ʿAlī delivered in Kūfa in justification of himself led to further desertions among his supporters. The insurrection soon possessed its own territory, its leaders and an embryonic political organization. ʿAlī's inability to win back his former supporters, despite a few successes, made a clash inevitable; it came in the battle of al-Nahrawān [*q.v.*], on 9 Ṣafar 38/17 July 658. Khwāridjism, as a politico-religious movement, was not however destroyed.

The assassination of ʿAlī, in 40/661, in the mosque of Kūfa, by the Khāridjī Ibn Muldjam [*q.v.*], left Shīʿism weakened and divided. It is to about this time that Muslim heresiography dates the appearance of the extremist (*ghulāt*) Shīʿī sect of the Sabā'iyya, whose founder ʿAbd Allāh b. Saba' [*q.v.*] seems to have been a Jew of Kūfa, converted to Islam (H. Laoust, *Schismes*, 15-6).

During the reign of Muʿāwiya (40/661-60/680), the province of ʿIrāḳ was incorporated in the new caliphate of which Damascus became the capital, but it was the centre of opposition from two elements, the Shīʿīs and the Khāridjīs.

The leader of the Shīʿī resistance, in Kūfa, was Ḥudjr b. ʿAdī [*q.v.*], who first clashed with the governor of the town, al-Mughīra b. Shuʿba [*q.v.*], and soon came into open conflict with Ziyād b. Abīhi [*q.v.*]. Charged with rebellion, Ḥudjr was arrested and executed in Mardj ʿAdhrā', near Damascus.

Khāridjī agitation still remained active. Several revolts caused anxiety to the Umayyad caliphate—one led by Farwa b. Nawfal in 41/661, another under al-Mustawrid in the following year, and in particular the revolt by two of the men who had fought at Nahrawān, towards the end of the caliphate of Muʿāwiya.

The death of Muʿāwiya in 60/680, the disputed succession of his son Yāzīd and the secession of ʿAbd Allāh b. Zubayr [*q.v.*] favoured the revival of the Shīʿī and Khāridjī opposition parties. The drama at Karbalā [*q.v.*], where the imām al-Ḥusayn [*q.v.*] met a martyr's death on 10 Muḥarram 61/10 October 680, finally confirmed the rupture between the supporters of the Umayyads and those of the Family of the Prophet, although Ḥusayn had met with only reluctant and uncertain support from the inhabitants of Kūfa.

The revolt of the Penitents (*tawwābūn* [*q.v.*]), an improvised and poorly-led affair, ended with the disaster of ʿAyn Warda, on 22 Djumādā I 65/4 January 685, but it delayed the Umayyad reconquest of ʿIrāḳ.

The revolt of Mukhtār b. Abī ʿUbayd [*q.v.*], which was accompanied by an extremist ideology which Sunnī heresiography has criticized severely, at first gained the support of some of the great Arab families in the region of Kūfa, and later attempted to win over the *mawālī* of the region. The revolt was finally crushed, in Kūfa, in Ramaḍān 67/April 687, by the governor of Baṣra, Muṣʿab b. Zubayr.

The first appearances in public life of the sect of the Kaysāniyya [*q.v.*] date roughly from this period, according to Muslim heresiography; a distinguishing feature of this sect was that, after the death of ʿAlī, it recognised the legitimacy of the claims of his son Muḥammad ibn al-Ḥanafiyya [*q.v.*] to the imāmate. In its turn, it split up into various sub-sects, many of which were ranked in the category of *ghulāt*; it is difficult to assess with any certainty either their ideology or the strength of their following (Kuraybiyya, Ḥarbiyya, Bayāniyya). On his death in about 57/716, Abū Hāshim, the son of Muḥammad ibn al-Ḥanafiyya, is credited with having handed over his own rights to the imāmate to the ʿAbbāsid claimant, Muḥammad b. ʿAlī, on the occasion of his journey to Ḥumayma, the residence of the ʿAbbāsids in Jordan. This thesis, of which the ʿAbbāsids made use in their anti-Umayyad campaign, was still admitted in the 8th/14th century by such historians as Ibn Kathīr, but it was not revived by the great theorists of the caliphate, such as al-Mawardī or Abu 'l-Maʿālī al-Djuwaynī.

At the end of the Umayyads, Shīʿī agitation reappeared with the revolt of Zayd b. ʿAlī [*q.v.*], who rebelled in Kūfa in 122/740 and met a tragic death in the town mosque where he had taken refuge with his last supporters. The revolt, though crushed in ʿIrāḳ, broke out a little later in Khurāsān, during the caliphate of al-Walīd II, under the leadership of Yaḥyā b. Zayd, whose mausoleum in Djūzadjān soon became a place of pilgrimage. With Zayd b. ʿAlī there appeared a militant form of Shīʿism, known as Zaydism [*q.v.*]; according to its theory, authority passed lawfully to every qualified descendant of Fāṭima who called for insurrection and armed struggle (*daʿwa* and *djihād*).

Another rebellion broke out a little later, once

again at Kūfa, under ʿAbd Allāh b. Muʿāwiya [*q.v.*] who was descended from neither Fāṭima nor ʿAlī, but from a brother of the latter, Dja'far al-Ṭayyār [*q.v.*], whose death had occurred in 8/629 at the time of the expedition of Muʾta. The revolt began in Kūfa in 127/744, shortly after the accession of Marwān al-Ḥimār [*q.v.*]. Finally crushed, the movement ended in circumstances not fully known. Several of its adherents are placed in the category of *ghulāt* (Djanāḥiyya, Ḥārithiyya).

The coming of the ʿAbbāsids did not bring calm or religious unity to ʿIrāḳ. Indeed, ʿIrāḳ was pre-eminently the centre of the Muʿtazila [*q.v.*] movement, which had already made its appearance with the ending of the Umayyads, but which developed more particularly under the caliphate of al-Maʾmūn and those of his two successors, in the two great schools of Baṣra and Baghdād. In the school of Baṣra, it is customary to include among its adherents such men as Abu 'l-Hudhayl al-ʿAllāf (d. 227/841 or 235/850 [*q.v.*]), al-Naẓẓām and Hishām al-Fuwaṭī (d. in about 200/816). In the school of Baghdād, of which Bishr b. al-Muʿtamir is often considered to be the founder, there were found men of such different personalities as Abū Mūsā al-Murdār and Thumāma b. Ashras. The two Djaʿfars—Djaʿfar b. Mubashshir and Djaʿfar b. Ḥarb—are sometimes counted by certain heresiographers, such as al-Malaṭī [*q.v.*], not as Muʿtazila but rather among the Zaydiyya of Baghdād.

The Muʿtazilī faction was to meet vigorous opposition, in the course of various confrontations among which the *miḥna* [*q.v.*] was doubtless the most dramatic episode, from the party of traditionalists, whose most militant representatives may be said to have included, among others, Aḥmad b. Ḥanbal [*q.v.*] and his first disciples [see ḤANĀBILA].

The third major characteristic feature of the history of the *firaḳ* in mediaeval ʿIrāḳ is found in the considerable importance acquired by imāmī Shīʿism, which sprang to life during the long crisis of the caliphate starting with the death of al-Mutawakkil, and which was defended by theologians of the very first order, such as the Banū Nawbakht, or al-Kulaynī (d. 329/940), the author of the *Kitāb al-Kāfī* which deals with both *uṣūl* and *furūʿ*. Of the various great scholars of Baghdād in the Būyid period, it is essential to remember the names of Ibn Bābūyah (d. 381/991), known as al-Shaykh al-Ṣadūḳ, al-Mufīd (d. 413/1023) and the two brothers al-Raḍī (d. 406/1016) and al-Murtaḍā (d. 436/1045), equally famous as men of letters and as theorists of Imāmism The Shaykh al-Ṭāʾifa Abū Djaʿfar al-Ṭūsī (d. 460/1068) is the last great representative of this school.

The arrival of the Saldjūḳs in Baghdād in 447/1055 marked the start of a revival of Sunnism, punctuated at times by violent crises, such as that of al-Basāsīrī, or by a renewal of Shīʿī agitation. Even within Sunnism itself, opposition between the Ashʿarīs and Ḥanbalīs led to fairly frequent clashes, one of the most notorious of these, in 469/1077, being known as the *fitna* of Ibn al-Ḳushayrī. In the last two centuries of the caliphate, Muʿtazilism although in its decline still kept its adherents, and Imāmism maintained its position in ʿIrāḳ. The part played by Imāmism in 656/1258, in the overthrow of the Caliphate by the Mongols, is certainly difficult to determine, but it is also difficult to deny. In any event, the Mongol conquest and the fall of the Sunnī Caliphate deprived Baghdād of the position of eminence which the great metropolis had never ceased to hold, since its foundation, as the true religious and political capital of the world of Islam.

vii.—ART AND ARCHAEOLOGY

The importance of the role played by ʿIrāḳ in the evolution of Islamic art is directly related to the historical role which ʿIrāḳ assumed from the time that it was the central province of a flourishing ʿAbbāsid empire, between the end of the 2nd/8th century and a period of dissolution, which is generally considered to begin in the 4th/10th century. A methodical description of this role of ʿIrāḳ would involve tracing, through its architecture and also through its minor arts, the various stages of the development of an imperial ʿAbbāsid art which began in the capitals of the caliphs as a result of various causes and influences both political and commercial, and which spread to the outer regions of the empire—from which in fact some of its characteristic features had originally stemmed. The progress of this art is the main title to fame of the craftsmen who worked at that time within the geographical limits of ʿIrāḳ but at the same time made use, in this melting-pot, of all the earlier or contemporary efforts pursued in other Islamic countries.

This "imperial" character which the art of ʿIrāḳ long enjoyed and which in fact it began to acquire at the end of the Umayyad period certainly makes it difficult to speak of it as if it were a typically local art which had developed throughout the centuries with a well defined personality springing from the constant factors, aesthetic or technical, imposed on it by the physical character of the country. It should nevertheless not be forgotten that the very character of ʿIrāḳ—as a route between other countries and an irrigable alluvial plain enriched by agriculture and by the traffic of its great rivers, but too frequently devastated by invasions and floods—was suited to particular methods of building, of architectural decoration and of other crafts, methods conditioned by the use of the economical and abundant but not very durable material—clay. This clay, packed together in the form of unbaked or baked bricks for the construction of the buildings themselves, applied for their decoration in facings (which might also be in plaster or stucco), and also worked into coarse pottery or rich enamelled porcelain, permitted the rapid completion, by typically Mesopotamian methods, of works satisfying the demands of a large urban population and of rulers seeking ostentation. But its use at the same time prevented such constructions from being sufficiently solid and durable to survive to the present day except as shapeless ruins. One may therefore distinguish as a characteristic of ʿIrāḳ that its products were simultaneously magnificent and insubstantial—a characteristic appearing in all foundations of the ʿAbbāsid period and later imitated in the princely constructions of various provinces of the empire, even when these provinces offered builders better and more durable materials.

The geographical conditions peculiar to ʿIrāḳ (but also varying within its present frontiers according to the different zones of climate and living conditions) must be considered responsible also for the parallel development, throughout its history, of several local schools of art, basically represented by those schools of Baghdād-Sāmarrā on the one hand and those of the Lower Delta on the other, together with that of al-Mawṣil [*q.v.*] or Upper Mesopotamia, which came more under the influence of the neighbouring

Anatolia and Ādharbaydjān. But such distinctions should not lead to too strict a topographical classification of an artistic development which, as always in Islamic countries, also underwent the influence of political events leading to the temporary triumph of minor dynasties. Thus Islamic art in ʿIrāḳ, both architecture and industrial art, should rather be considered in a chronological perspective, particular regard being paid to the fact that probably in no Islamic country has there been a more complete change in its landscape between the Middle Ages and today.

The few archaeological data which may be gleaned from sites which too often have reverted to desert are not in fact enough to provide any certain information on the various phases of population which the region passed through when the progressive decay of the irrigation network after the Abbāsid golden age led to the abandonment of villages and small towns, the exact sites and dimensions of which it is today sometimes difficult to determine (for an attempt at this, which applied extensive research to a limited area and which might well be extended to cover the whole of the ancient cultivated basin of the Tigris and the Euphrates, see R. Mc. C. Adams, *Land Behind Baghdad*, Chicago-London, 1965). Similarly it is at present impossible, in most cases, to provide an accurate history of ʿIrāḳī Muslim towns, which were exceptionally important both in their population and in their economic activity, but which had grown up on an unstable soil, where usually there cannot now be found such remains of monuments as would enable us to reconstruct their topography at different periods (on the present state of such researches, too often based only on literary sources, see BAGHDĀD, AL-BAṢRA, AL-KŪFA, etc.).

There has nevertheless been some progress recently in the study of early Islamic architecture in ʿIrāḳ, based on hitherto neglected evidence. This progress justifies our referring, in order to complete it in some points, to the table in the article ARCHITECTURE showing its development during the first centuries of Islam, a period when its development was one with that of the whole of Islamic art.

The most positive if not the most spectacular contribution has probably been in the field of utilitarian civil architecture, of little attraction to the art historian, but providing material for the historian of civilization. Recent investigations on the systems of canal building and the division of irrigation-water which permitted the exploitation of the land during the Umayyad and ʿAbbāsid periods, have produced a new documentation on this subject, based on aerial photography as well as on stratigraphical soundings and sections. At the same time there was revealed the existence of a type of great mosque on the one hand and a type of royal residence on the other, dating from the very early Islamic occupation of the country and differing from the Syrian specimens of the same period, which until then had been regarded as the only examples of the art of the period. The primitive mosque discovered at Uskāf Banī Djunayd, on the west bank of the Nahrawān canal, and also in particular the mosque at Wāsiṭ excavated on the site of the capital built in a single operation between 83/703 and 86/706 by the famous governor of ʿIrāḳ for ʿAbd al-Maliḳ, al-Ḥadjdjādj [*q.v.*], now provide plans more reliable than those based on debateable interpretations of the famous great mosques of al-Baṣra and al-Kūfa. In addition, the interesting palaces which have been identified in these same localities of Wāsiṭ and Uskāf Banī Djunayd and also in the neighbourhood of the great mosque at al-Kūfa, although excavations are so far incomplete and the results not fully published, provide as many examples of those *dār al-imāra* or *ḳaṣr al-imāra* which were built at that time within the new Islamic cities. These palaces were already distinct, in the arrangement of their interior appartments or *bayt* (similar to those found later in the ʿAbbāsid houses and palaces), from the models current for the *ḳaṣr*s in Syrian territory. The conclusions which may be drawn from these facts have so far been merely hinted at, but they should lead to a greater recognition of the part played in the development of early Islamic civilization by this Mesopotamian province, in which the ʿAbbāsid revolution merely consolidated an economic and intellectual supremacy which had for long been acknowledged.

It is sufficient here to re-state only the main features of the ʿAbbāsid architectural flowering in ʿIrāḳ. The classic details on the subject, mainly derived from the study of the exceptional site provided by the ruined capital of the caliphs, Sāmarrā [*q.v.*], are to be found in every analysis of traditional Islamic art (see ARCHITECTURE, FANN), so far as regards both the structure of the main buildings and also the various styles of decorative facing in painted or moulded stucco drawing on a repertoire of floral arabesques, interlaced geometrical patterns and even of representations of figures; these were to continue to appear throughout the later changes of early imperial art. Useful indications on various particular points may result from the research and restoration in progress at Ukhayḍir [*q.v.*] an isolated castle of uncertain date which today stands in the desert steppe to the west of al-Kūfa, or from the continuation of investigations which up to now have been limited to a few selected new sections within the enormous area of Sāmarrā. They will not however greatly alter the present view of the width of the conception and the amazing richness characteristic of the religious and civil architecture of the period, which also saw the high points of such industrial crafts as glass-making and ceramics (the latter competing with Chinese porcelain, then imported in great quantity for the use of the caliphs), or carving on valuable woods, of which a few rare specimens have survived. In ceramic art reference is usually made to an original ʿAbbāsid school of Mesopotamia which flourished in the 3rd/9th and 4th/10th centuries before the craftsmen emigrated, probably to Fāṭimid Egypt, and which owed its fame mainly to its productions in cream porcelain with a painted decoration in cobalt blue or lustre.

Separate reference cannot be made here to the art of Buwayhid and Saldjūḳid ʿIrāḳ, the architectural examples of which have completely disappeared and the productions of whose craftsmen are not sufficiently distinct from those found at that period in the Iranian provinces, as a result of the revival of various earlier local traditions. The following period however was marked by a new advance in Islamic art in ʿIrāḳ; this was, it is true, in a "provincial" form and had little influence outside the country, but it possessed a vitality comparable with that of the neighbouring countries. It is from this post-Saldjūḳid period, covering the 6th/12th and 7th/13th centuries, that date the majority of the monuments which today form the architectural heritage of towns such as Baghdād and al-Mawṣil. In Baghdād, they are the results of the efforts made by the Caliphs al-Nāṣir [*q.v.*] and al-Mustanṣir [*q.v.*] to regain a temporal power, admittedly limited, but based on their territorial indepen-

dence and on a partial recovery of the former prestige of the caliphs. In the region of al-Mawṣil, they are proof of the existence, at the small court of Zangī and his successors the Atabegs [*q.v.*] including the famous Luʾluʾ [*q.v.*], of an artistic centre which was certainly neither negligible nor without an original vigour, in spite of the variety of influences which had produced it.

We shall refer here to the main features of this period of architectural development in Baghdād as shown by a rapid survey of its most important remains: fortifications (*e.g.*, monumental gates such as al-Bāb al-Wasṭānī and Bāb al-Ṭalism, of which the latter disappeared at the beginning of this century); fragments of civil buildings such as the Ḥarba bridge, the ruined remains of the former palace of the caliphs (incorporated in what later became the Ottoman citadel); or religious buildings in various stages of ruin, like the Mustanṣiriyya *madrasa*, the mosque of the Sūḳ al-Ghazl (of which only the minaret has survived), or the mausoleum of al-Zubayda; we may also note such remains, outside the boundaries of Baghdād proper, as the sanctuary of Bāb al-Ghaybā at Sāmarrā or the tomb of al-Ḥasan al-Baṣrī at al-Baṣra. All these buildings display an extreme technical perfection in the use of baked bricks, according to the tradition already in use during the Saldjūḳid period, but in addition a new taste for the picturesque and a sumptuous treatment (of exteriors only), manifesting itself in the replacement of free forms by complicated compositions, either structural (honeycomb corbals used even to support domes of characteristic profile) or decorative (reduced motifs of arabesques and interlaced polygons moulded in baked clay and indecipherable now that they are seen out of scale).

This homogeneous architecture of Baghdād may be contrasted with the inequality to be found among the monuments of Upper Mesopotamia of the same period, such as the important but insufficiently studied group existing at al-Mawṣil (ruins of the palace of Luʾluʾ or Kara Sarāy on the banks of the Tigris, many small sanctuaries or tombs of saints, and a great mosque with one solitary and imposing cylindrical minaret of brick) or the archaeological remains surviving in localities such as Sindjār [*q.v.*], Irbil [*q.v.*] or Takrīt, where the mausoleum of the Arbaʿīn has recently been restored. In each case the ever-present influence of the techniques of brick and stucco is combined with the use of stone, abundant there although of poor quality, so as to produce work which is of a somewhat clumsy and hybrid nature. Nevertheless a common tendency may be seen in certain architectural details (cupolas replaced by stone roofs in corrugated cones or in pyramids), in the form/style of mouldings and the architraves with rectilinear and curvilinear denticulation, in fact in a new interpretation of the arabesque with its asymmetrical floral ornaments hidden inside the scrolls of an enveloping stem.

This expansion of architecture in ʿIrāḳ in the 6th/12th and 7th/13th centuries was accompanied by a similar one in the minor arts in which various ʿIrāḳī schools managed to gain for themselves an undoubted pre-eminence. There should first be mentioned the manufacture of ceramics, not perhaps for glazed ceramic ware (whose main centre of production was still at al-Raḳḳa, outside the boundaries of present-day ʿIrāḳ), but at least for the non-glazed pottery with ornament in relief, the finest pieces of which are today considered to be al-Mawṣil work. In al-Mawṣil also there existed a brilliant school of workers in copper and in bronze, who left a large number of dated and signed objects, as interesting for the exceptional quality of their decorative incrustation in gold and silver as for the information they provide on the workshops from which they came and the families of craftsmen who gradually perfected the technique of making them. Above all painting in ʿIrāḳ of this period (which is sometimes called "Arab" but which was really the product of a mixed society, already very different from that which had existed during the ʿAbbāsid golden age) is represented by important works, the paintings in manuscripts of the Mesopotamian school in the wider sense (this school is sometimes divided into a school of Upper Mesopotamia and a more specifically "Baghdādī" school, but no firm distinctions have been established). The daily life of the period is illustrated in many concise and expressive pictures which mark the birth of an art of miniature painting which was destined to hold an important place among the Islamic arts of later periods, but of which these early examples had already attained a marked maturity of design and colour.

The capture of Baghdād by the Mongols in 656/1258 appears to have marked the end of the artistic supremacy which had been ʿIrāḳ's from the time of the Islamic conquest but which did not survive the slow economic and political decline setting in after this date (the immediate result of this disaster should, perhaps, not be exaggerated), a fate which was inevitable in a province which was now subordinate and no longer a conquering power. It is true that this more restricted life was still accompanied by activity in architecture and crafts. Throughout several centuries various noteworthy buildings were erected, in particular around the great Shīʿī shrines to which embellishments were continually added, in Baghdād as in Sāmarrā, Nadjaf or Karbalāʾ, and whose domes, covered with square porcelain tiles in glowing colours, may still be seen. But these various monuments which stem stylistically either from the art of Ilkhānid Persia (*e.g.*, the Mirdjāniyya *madrasa* or the Khan Mirdjan of Baghdād) or Ṣafawid Persia or from Ottoman art (represented mainly by mosques, and by utilitarian buildings such as markets or *ḥammāms*) have not yet been the subject of studies or inventories enabling them to be assigned to their correct places in the line of a tradition which is both local and yet marked by many foreign influences, and thus conforms to one of the constant features of the history of ʿIrāḳ.

Bibliography: All the general works on Islamic architecture and minor arts contain material on the various artistic developments of ʿAbbāsid and post-Saldjūḳid ʿIrāḳ. To the more specialised bibliographies which these works contain we merely add here, in addition to two interesting articles by O. Grabar, *Umayyad "Palace" and the ʿAbbāsid "Revolution"*, in *Stud. Isl.*, xviii (1963), 5-18, *Al-Mushatta, Baghdad and Wasit*, in *The World of Islam. Studies in Honour of Ph. K. Hitti*, London-New York 1959, 99-108, the various works or articles announcing the results of the latest work done by the ʿIrāḳ Department of Antiquities, from the volume by F. Safar, *Wâsit. The Sixth Season's Excavations*, Cairo 1945, to the latest reports published in the review *Sumer*. See also J. Sourdel-Thomine, *L'art de Bagdad*, in *Arabica* ix, (1962), 449-465, and *Peinture arabe et société musulmane à propos d'un livre récent*, in *R.E.I.*, xxxi (1963), 115-21.

(J. Sourdel-Thomine)

ʿIRĀḲ ʿADJAMĪ [see al-djibāl].

ʿIRĀḲĪ, Fakhr al-Dīn Ibrāhīm ʿIrāḳī Hamadānī, eminent Iranian poet and mystic. In spite of its lack of precision, the best source of information on this author, who gives very few autobiographical details in his own works, is an anonymous *muḳaddima* (introduction), composed in the manner and style of ʿIrāḳī's own period (the end of the 7th/13th century) or the beginning of the following period. Djāmī (*Nafaḥāt al-uns*) and Mīr Khwānd (*Ḥabīb al-siyar*) have obtained their information on ʿIrāḳī from this introduction. According to Ḥamd Allāh Mustawfī Ḳazwīnī, who wrote his *Tārīkh-i guzīda* forty years after the death of ʿIrāḳī (and there is no reason to suspect his witness), ʿIrāḳī's father's name was Buzurgmihr b. ʿAbd al-Ghaffār Djawāliḳī Hamadānī, and his son was born in the village of Kumdjān, near Hamadān. In his introduction (*dībāče*) to his edition of the *Kulliyyāt*, Saʿīd Nafīsī inserts the biographies given by other authors (p. vi ff.); he reproduces the errors of Dawlatshāh, and states that there is no foundation for what the latter says about ʿIrāḳī's attachment to a young boy and the punishment imposed by Shahrazūrī, who is said to have sent him to Bahāʾ al-Dīn Zakariyyā in India, to mend his ways. In short, the later writers added many debatable details to ʿIrāḳī's biography.

According to the *muḳaddima*, he was a precocious youth. One day when he was uttering a commentary on the Ḳurʾān, some *ḳalandars* (wandering dervishes) came to listen to him; they persuaded him (in 627/1230) to give up teaching and to follow them to ʿIrāḳ-i ʿAdjamī, and then to India; at Multān, they visited the scholar Bahāʾ al-Dīn Zakariyyā [*q.v.*], who, recognizing ʿIrāḳī's ability, wished him to remain with him, but when ʿIrāḳī realized this, he departed with his companions to Delhi and then to Sūmanāt, where they were separated by a storm; after wandering for some time, ʿIrāḳī and one of the *ḳalandars* met again by chance in Delhi; then ʿIrāḳī, having decided to join Bahāʾ al-Dīn Zakariyyā, returned alone to Multān and sat at the feet of the master, later becoming his son-in-law; soon afterwards, he had a son named Kabīr al-Dīn, and he remained for twenty-five years with his master, about whom he wrote several *ḳaṣīdas*. On his death, he succeeded him, but, driven out by the jealousy of some of his colleagues, he departed for the Ḥidjāz, whither some of them followed him. He was welcomed by the sultan of ʿUmān, who attempted in vain to detain him, and the travellers completed the Pilgrimage. Next, ʿIrāḳī travelled in Asia Minor and put himself under the authority of Ṣadr al-Dīn of Ḳonya; after hearing his commentaries on the *Fuṣūṣ* and the *Futūḥāt al-Makkiyya* of Ibn al-ʿArabī [*q.v.*], he gained the master's confidence. It was it this time that he wrote his *Lamaʿāt*; he submitted them to Ṣadr al-Dīn, who praised them highly (they must therefore have been completed before 673/1274, when the latter died). Many pupils attached themselves to ʿIrāḳī; he gained the favour of the *amīr* Muʿīn al-Dīn Sulaymān Parvāna [*q.v.*], who offered him a monastery at Dūḳāt (Toḳāt). A series of anecdotes in the *muḳaddima* concern ʿIrāḳī's stay in this town, and in particular his meeting with the minister (Shams al-Dīn) Djuwaynī [*q.v.*] (*Muḳ.*, 14-6), who is said to have come there in the company of a brother of the Īl-khān Abāḳā, in order to check on the actions of Muʿīn al-Dīn (before 676/1277, when the latter was probably secretly in contact with Baybars, the sultan of Egypt—which led to his being executed in the same year). Soon after this meeting, it seems that the enemies of Muʿīn al-Dīn and of his protégé ʿIrāḳī turned Shams al-Dīn against them, though the latter, recognizing ʿIrāḳī's worth, assisted his hasty departure to Sinope. Thence ʿIrāḳī went to Egypt, where he gained the favour of the sultan; this is attested by several anecdotes. After this he planned to go to Damascus: the sultan had messages sent by carrier pigeons at the various stages of the journey and caused a solemn reception to be prepared for him; in the sixth month of his stay in Damascus, ʿIrāḳī was joined by his son, who had spent several years at Multān with Bahāʾ al-Dīn Zakariyyā, but soon afterwards he became ill; after five days spent in a state of somnolence, he summoned his son and his companions, bade them farewell, chanted a verse of the Ḳurʾān (LXXX, 34-5), recited a *rubāʿī* (*Muḳaddima*, 19) and died while calling on God. His funeral was solemn and moving and he was buried on the Ṣāliḥiyya hill on 8 Dhu 'l-Ḳaʿda 688/23 November 1289; he was 78 years of age.

The author of the *Muḳaddima* quotes where appropriate the first lines of several *ghazals* written by ʿIrāḳī on various occasions in his life. In his introduction (*dībādja*, p. xxxviii), Saʿīd Nafīsī says of his genius as a poet: "I know no poet in the Persian language who is as free, as daring and as lofty in the expression of love (mystic or profane) as ʿIrāḳī; this ardour, this passion, are shown clearly and to the highest degree in his *ghazals*; in addition, he shows his skill in the *tardjīʿband* and the *rubāʿī*, though less so in the *ḳaṣīda* and the *mathnawī*; in short, he excels mainly in his *ghazals*, several of which have been developed into *mukhammas* by other poets". In spite of their merits, his two other works (*ʿUshshaḳ-nāma*, *Lamaʿāt*) appear of secondary importance compared with his *Dīwān*, consisting mainly of *ghazals*. The *ʿUshshaḳ-nāma* (Book of beings enamoured [of God]) or *dih-nāma* (Book of the ten sections), in verse, dedicated to Shams al-Dīn Djuwaynī, is made up of a *mathnawī* followed by *ghazals* on mystic subjects; it was imitated by several poets (the *Dih-namā* of Awḥadī, d. 705/1305, and of ʿImād al-Dīn Faḳīh, d. 773/1371-2; the *Rawḍat al-muḥibbīn* of Ibn ʿImād Shīrāzī, d. 794/1391-2). The *Kitāb al-Lamaʿāt* (Book of beams of light) in 28 chapters—prose and verse mixed—is considered to have been written, at least in part, under the influence of the works of Ibn al-ʿArabī; however, at the beginning of the book (*Kulliyyāt*, 328, l. 1) we read; "Now therefore these few words, setting out the degrees of love, have been dictated according to the mood of the moment, in the manner of the *Sawāniḥ* [of al-Ghazālī [*q.v.*] Aḥmad], so that for whoever loves God they may be the mirror showing him the One Whom he loves, although the rank of love is too sublime for one to be able to approach by means of reason, understanding and eloquence, the royal Court of His Majesty . . .". E. G. Browne (iii, 132-9) has translated the introduction giving the content of the work (cf. text: *Kulliyyāt*, 327-9); he summarizes as follows (p. 124) his judgement on ʿIrāḳī's character (of which S. Nafīsī gives some typical illustrations in his introduction to the *Kulliyyāt*, p. xviii ff.): "He is the typical qalandar, heedless of his reputation, and seeing in every beautiful face or object a reflection, as in a mirror, of the Eternal Beauty" (cf. the end of the dialogue of Socrates and Diotimus: Plato, *Symposium*, Greek text, 209-12).

Bibliography: *Kulliyyāt*, complete works, ed. Saʿīd Nafīsī, with important introduction, Tehran 1335/1957; *Lamaʿāt*, ed H. Ritter (Bibl. Islamica, XVI)—Translations: *The Song of the Lovers*

ʿUshhāḳ-nāma), ed. and tr. into English verse by A. J. Arberry, Oxford 1939; extracts from the *Dīwān*: E. G. Browne (*op. cit.*, 124-131); Z. Safa, *Anthologie de la poésie persane*, Paris 1964, 225-8; J. von Hammer, *Geschichte der schönen Redekünste Persiens*, Vienna 1818, 226-7. J. Rypka, *Iranische Literaturgeschichte*, Leipzig 1959, 247 (= Eng. tr., 254-5). (H. MASSÉ)

IRAM, name of a tribe or place:

(1) A tribe called Iram is mentioned several times in ancient poems (over a dozen references are given by J. Horovitz, *Koranische Untersuchungen*, Berlin 1926, 89 f.). It is mostly coupled with ʿĀd, but sometimes also with Thamūd, Ḥimyar, etc., and is said to have been destroyed by a man called Ḳudār al-Aḥmar (Uḥaymir). In this meaning Iram is an ancient Arabian tribe. In his *Muʿallaḳa*, 68, al-Ḥārith b. Ḥilliza uses the adjective *iramī* in the sense of 'a man of ancient race' (cf. al-Tibrīzī, *ad loc.*). When Muslim scholars came to link up traditional Arab genealogies with those of the Bible, they identified Iram with Aram the son of Shem (*Genesis*, x, 22 f.; 1 *Chronicles*, i, 17), and made various ancient peoples of Arabia descendants of Iram. Thus ʿĀd [*q.v.*] is the son of ʿAws b. Iram (cf. Biblical Uz) and Thamūd [*q.v.*] the son of ʿĀbir b. Iram. The ʿAmālīḳ [*q.v.*] or Amalekites are the descendants of ʿAmlīḳ (or ʿImlāḳ) b. Lāwudh (cf. Lud) b. Iram; and another son of Lāwudh, Uwaym, is said to have gone to Persia and is sometimes identified with Gayomart (Ibn Hishām, 5; al-Masʿūdī, *Murūdj*, i, 77 f.; etc.).

(2) As a geographical term Iram is properly a pile of stones erected as a way-mark. Yāḳūt (*Muʿdjam*, i, 212-6) mentions a mountain and another place of this name in Arabia (cf. Th. Nöldeke, *Fünf Moallaqat*, i, 78). When Muslim scholars regard Iram Dhāt al-ʿimād as a town, they mostly identify it with Damascus, presumably because this part of Syria is called *arām* in Hebrew. Some, however, make it Alexandria or a place in the Yemen (Yāḳūt, *loc. cit.*).

(3) The word occurs once in the Ḳurʾān (LXXXIX, 6): *a lam tara kayfa faʿala rabbu-ka biʿādⁱⁿ irama dhāti ʾl-ʿimādi* ... The passage has caused great difficulty to the commentators, both in respect of the meaning of the words and of their grammatical construction. Some read *ʿādi*, making *irama* a dependent genitive, and then took Iram to be the capital of ʿĀd. The most likely view is that Iram designates a tribe and is in apposition with *ʿādⁱⁿ*, and that *ʿimād* means tent-pole or tallness. Iram may then be a subdivision of ʿĀd, as al-Ṭabarī suggests (*ad loc.*). Later Muslim scholars preferred to take Iram as a town, and *dhāti ʾl-ʿimād* could then mean 'with the pillars'; this was said to be the marble columns of Damascus. It is fascinating to observe the increasing elaboration of the accounts of this Iram Dhāt al-ʿimād. One common story tells how it was built near Aden by Shaddād b. ʿĀd as an imitation of Paradise, and how he was then, as a punishment for his pride, destroyed by a tornado and the city buried in sand (Yāḳūt, *loc. cit.*). In another story Alexander the Great finds at Alexandria the ruins of a great building with marble columns and an inscription telling how it was built as a replica of the first Iram Dhāt al-ʿimād. Yet another story tells how in the reign of Muʿāwiya a bedouin found wonderful ruins in the sand.
